SENATOR RUCHO: Let's present the Rucho-Lewis Congressional 2A map.

REP. LEWIS: Ladies and gentlemen of the Senate, the House Redistricting Committee, I'm Representative David Lewis, Senior Chair of the House Committee. I wish to begin by saying good morning to you all and thank you all for giving your time to be here today.

Today I will present to you a plan developed by Senator Bob Rucho, Chair of the Senate Redistricting Committee, and me to provide for the creation of 13 Congressional Districts for the citizens of the State of North Carolina.

Senator Rucho and I are proud to present for your consideration the plan before you entitled Rucho-Lewis 2A.

From the very beginning of this process, our goal has been and remains the creation of fair and legal Congressional Districts. In doing so, our process has included an unprecedented number of public hearings.

We held 36 public hearings before the release of any maps. This provided an opportunity for members of the public to address any concerns regarding redistricting that they may have and that

they would consider before maps were drawn.

After the release of our proposed Voting Rights Act District, we held another seven public hearings in which we asked the public to comment on the voting rights districts that were presented and also on any other redistricting matter that they may wish to expound upon.

Ten public hearings dedicated to receiving public comments after the release of our first Congressional Plan, Rucho-Lewis 1. Ten additional public hearings after the release of our respective proposals for legislative districts which also provided the opportunity for the public to comment on Rucho-Lewis 1.

Additionally, we provided easy access for public commenting -- for public comments to be provided on the North Carolina General Assembly website and invited additional written comments both through e-mail and the U.S. Postal Service.

Senator Rucho and I thank the thousands of citizens who expressed and exercised their rights to offer comments at these public hearings or submit written comments.

All of these comments have been reviewed by the Chairs and preserved as a part of the

permanent record of citizen input on this important task.

We have also taken the unprecedented step of providing the leadership of minority parties in the House and the Senate specialized computer hardware and software in their respective offices, along with staff support, to use those products which is available to all members.

To further encourage diverse participation from members, we took the unprecedented act of providing office space, computer technology and staff support to the Legislative Black Caucus. The budget provided to the Legislative Black Caucus for staff support alone exceeded $64,000. These resources were directed by Chairman of the Legislative Black Caucus, Senator Floyd McKissick, and the respective members of that caucus.

Today we are pleased to discuss the product of this effort and respectfully submit our proposed 2011 Congressional Plan. We believe it fully complies with applicable federal and state law. We also believe that a majority of North Carolinians will agree that our proposed plan will establish Congressional districts that are fair to North Carolina voters.

In addition to input from citizens, we also considered the following: first, the use of the current Congressional plan as a frame of reference. The current Congressional plan could not be retained for several reasons.

Thus, our proposed plan -- pardon me. While we did use the current plan as a frame of reference for redrawing the new Congressional district, our proposed plans could not simply adopt them because they do not comply with the zero deviation requirement. That refers to compliance with one person, one vote.

Based upon several decisions by the United States Supreme Court, Congressional districts must be drawn at equal population. The ideal population for a North Carolina Congressional district under the 2010 Census is 733,499 people.

Redrawing districts with equal population necessitated significant changes in the boundary lines of the current districts. Revisions were required because six of the current Congressional districts are underpopulated below the ideal number. Those are Districts 1, 5, 6, 8, 10 and 11.

In contrast, seven districts are overpopulated above the ideal number. Those are

Districts 2, 3, 4, 7, 9, 12 and 13.

The population shift between our 13 districts is largely a result of more rapid population growth in the Mecklenburg, Piedmont and Research Triangle areas of our state than in the more rural areas located in eastern and western North Carolina, respectively.

Third, we were committed to being in compliance with the Voting Rights Act. Our proposed plan, if adopted by the General Assembly, will need to be pretty clear under Section 5 of the Voting Rights Act.

States have the option of seeking administrative pre-clearance through the United States Department of Justice or by filing a lawsuit seeking pre-clearance to the United States District Court in the District of Columbia.

To obtain pre-clearance, we are obligated to show that our plan is not retrogressive or purposefully discriminatory. We believe our plan accomplishes this goal.

We also considered the particular districts currently represented by black incumbents. Voters in the First and the Twelfth Congressional Districts are represented by two

African American members of Congress, Congressman G.K. Butterfield and Congressman Mel Watt. As part of our investigation into fair and legal Congressional Districts we sought advice from Congressman Butterfield and from Congressman Watt. We believed that we could benefit from hearing their views on how their districts should be redrawn in light of the population movement.

Senator Rucho and I met with Congressman Butterfield; Senator Rucho met with Congressman Watt.

The State's First Congressional District as originally drawn in 1992 has a majority black -- excuse me. The State's First Congressional District was originally drawn in 1992 as a majority black district. It was established by the State to comply with Section 2 of the Voting Rights Act.

Under the decision in the United States Supreme Court in Strickland versus Bartlett, the State is now -- pardon me. Let me come back to that point.

The primary concern with the First District is that it was underpopulated by 97,500 people. Thus, in order to comply with the one person, one vote requirement, over 97,500 people

had to be added to create a new First Congressional District.

We sought and received both oral and written comments from Congressman Butterfield and have incorporated his thoughts into the proposed new First Congressional District.

There are some who have criticized us and encouraged us to eliminate the First District because of its shape. Those who have made this argument fail to understand that the 2011 General Assembly inherited the First District from prior General Assemblies and that prior General Assemblies enacted the First District in order to comply with Section 2 of the Voting Rights Act.

For example, some of the same critics are apparently unaware that the shape of the First District has been approved by the federal District Court as compliant with minority population compactness. It would be legally imprudent, we decided, to dissolve this district.

However, as I've already said, we cannot keep the 2001 version of the First District because of two flaws: First, the current First District is underpopulated, as I've said, by over 97,000 people. Second, it does not include a majority

black voting age population, which later in these remarks I may refer to as BVAP, that is required by Section 2 of the Voting Rights Act.

Thus, any revision to the First District requires the addition of over 97,000 people and among those added must be a population sufficient in number of African Americans so that the First District can reestablish itself as a majority black district.

Prior to the release of Rucho-Lewis 1, we discussed both of these problems with Congressman Butterfield. We believed that he understood and agreed that his district would be drawn into either Wake or Durham Counties to cure the district's equal population and voting rights deficiencies.

We understood that Congressman Butterfield preferred that his district be drawn into Wake County as a solution to that problem.

We also discussed with Congressman Butterfield that redrawing his district into Wake County may result in the withdrawal for his district of one or more counties covered by Section 5 of the Voting Rights Act. Our understanding of Congressman Butterfield's preference was reflected in the initial version of the Congressional map

filed and labeled Rucho-Lewis 1.

During the public hearings, several speakers expressed concern about our decision to withdraw from the First -- to withdraw from the First District several counties covered by Section 5 of the Voting Rights Act. Despite these, we received only one other proposal that would bring the First District back to a majority black level.

This sole, proposed alternative drew the First District into Durham County instead of Wake. The proposal also included all of the sections for -- all of the Section 5 counties currently found in the 2001 version of the First District.

Following the public hearing, Congressman Butterfield issued a statement disputing our understanding of our prior discussion with him. Thus, we now understand Congressman Butterfield's position regarding the First District. It appears that he may have no preference in redrawing his district into either Wake or Durham Counties.

We assumed Congressman Butterfield would support keeping the black population in Section 5 counties at higher levels as compared to the amount of black population in Section 5 counties under the

2001 version of the First Congressional District.

Based upon this feedback, Rucho-Lewis 2 has drawn the First District into Durham County instead of Wake.

There is a historical precedent for a district that combines Durham with counties located in eastern North Carolina. Moreover, our revised version of the First District brings it up to the ideal population with other districts and reestablishes it as a majority black district.

While our initial version of the First District was fully compliant with Section 2 and Section 5 of the Voting Rights Act, our second version includes populations from all of the Section 5 counties found in the 2001 version of the First Congressional District.

Moreover, the total BVAP located in Section 5 counties in Rucho-Lewis 2 exceeds the total BVAP currently found in the 2001 version of Congressional District 1.

Again, some of our critics complained about the appearance of the proposed Twelfth District. Again, these critics failed to understand that we inherited the Twelfth District from prior General Assemblies.

Further, this district has been approved by the United States Supreme Court as a district lawfully drawn to elect a Democrat. This district, as a part of our submission, has also been cleared -- been pre-cleared under Section 5 of the Voting Rights Act.

In adopting the Twelfth District -- excuse me. In adopting the Twelfth District, we intended to accommodate wishes expressed to us by Congressman Watt as we understood him and continued to include populations located in Mecklenburg, Guilford and Forsyth Counties.

Our revised version of this district makes it more compact and continues the district as a very strong Democratic district. Our revision of the Twelfth District is based upon whole precincts that voted heavily for President Obama in the 2008 general election.

We have been accused of illegally packing blacks into the Twelfth District and illegally diluting the influence of black voters. We have repeatedly asked our critics for any case law that supports these arguments. To date, none has been provided.

By continuing to maintain this district as

a very strong Democratic district, we understand that districts joining the Twelfth will become more competitive for Republican candidates. Finally, we agreed on the Twelfth District to reduce population because the 2010 census showed it is currently overpopulated.

Minority population was also considered in other districts as well. No district in the 2001 Congressional Plan contains a Black Voting Age Population in excess of 28.75 percent except for the First and the Twelfth.

Our proposed -- excuse me. Our proposed Fourth Congressional District establishes one district with a black voting age population of 30.72. That is the Fourth Congressional District.

Our proposed District 8 has a black voting age population of 17.91 percent and a Native American voting age population of 7.03 percent.

The average black population in the other nine districts is 13.24 percent. The lowest black population is found in the Eleventh Congressional District. It is at three percent.

We believe that our plan as proposed fully complies with both Section 5 and Section 2 of the Voting Rights Act.

We also considered point continuity in past Congressional plans, prior legislative leadership elected to make a few Congressional Districts contiguous by mathematical point. All of our Congressional Districts are contiguous in a real and meaningful manner.

Number 5, while not required in drawing Congressional districts, we did consider the impact and the importance of whole counties and whole precincts. Counties and precincts are two specific examples of communities of interest. Like other interests, they must be balanced.

Again, while not required in Congressional redistricting, we have attempted to respect county lines and whole precincts whenever it was logical to do so and consistent with other relevant factors. Many of our precinct divisions were prompted by the creation of Congressman Butterfield's majority black First Congressional District or when precincts had to be split in order to achieve the zero deviation population.

Next, we considered urban counties. We decided to continue the tradition, as reflected in the 2001 plan, that results in the division of urban counties and their populations being divided

into more than one Congressional district. We agree with the decision of prior legislative leadership that urban counties are best represented by multiple members of congress.

Moreover, creating more multiple districts within an urban county makes it less likely that the Congressional districts between the time of enactment and the time of the next Census will experience the significant population shifts that have made the 2001 plan so unbalanced. Unlike other plans, we extended this practice uniformly to Buncombe County.

We also sought to create more competitive districts. The federal and state constitution allows legislatures to consider partisan impacts in making Congressional redistricting decisions.

While we have not been ignorant of the partisan impacts of the districts that we have created, we have focused on ensuring that the districts will be more competitive than the districts created by the 2001 legislature. We feel it worthy to note that while three of the proposed districts have outright majority Democratic registered voters, none of the proposed districts have majority Republican registered voters.

Finally, the combination of Democrats plus unaffiliated voters constitutes significant majorities in all 13 districts.

In conclusion, based on our historical and unprecedented outreach to the public, outreach to the members of the General Assembly and to interested parties, following a responsible schedule to debate and pass these maps which allows time for pre-clearance to occur without interruption to the 2012 election schedule, adherence to federal and state law, especially or specifically the one man, one vote and the Voting Rights Act.

We feel we produce maps that are legal, competitive and offer all citizens the chance to elect the candidate of their choice.

We respectfully ask the approval of this plan, and I appreciate your indulgence in allowing me to offer these remarks, and at the discretion of the Chair, I'll be happy to yield to any inquiries. Thank you

SENATOR RUCHO: Thank you very much, Chairman Lewis, for an excellent explanation of the Congressional maps.

As a reminder to each member of the Joint

House and Senate Committee, the Senate -- first of all, the committee meetings today will be strictly informational. There will be no votes or amendments taken today.

As a reminder to Senate members, we will be meeting for an explanation of the Senate map between 2:00 and 4:00 in 544 LOB, and for the House members, you will be meeting roughly 5:00 to 7:00 for approximately two hours in 643 LOB, So put that on your calendar. We will want everyone's attention there.

That being said, I open it to committee members to questions that would like to be asked regarding the Congressional districts. Are there any questions?

Yes, sir, Representative Rapp.

REP. RAPP: Thank you, Mr. Chair.

And, Chairman Lewis, I would like to start by having you just review for me one more time who was actually involved in crafting these maps.

REP. LEWIS: Representative Rapp, I was intimately involved in the crafting of these maps. Chairman Rucho was intimately involved in the crafting of this map.

To assist us we hired a -- forgive me if I

do not use the correct terminology. We hired a map drawer whose name is Tom Hofeller. Mr. Hofeller is a well-respected expert in the field of map drawing and you used to say that he would put the pen to the paper but I guess actually he put the mouse to the screen, and in full disclosure, Representative Dollar was also very involved in the construction of these maps.

REP. RAPP: Follow-up.

SENATOR RUCHO: I'm sorry. Yes, sir.

REP. RAPP: Just a follow-up. Were there other members of this committee that played an active role in the drawing of the maps?

REP. LEWIS: Representative Rapp, resources were made available in the General Assembly for members to have input. Input was requested by the Chairs either in a formal presentation or by simply having conversation, and so to those members that chose to have a role in drawing this map had one in terms of the Chairs listened to what they had to say.

REP. RAPP: Thank you.

SENATOR RUCHO: Thank you, sir.

I have a question from Representative Fisher.

REP. FISHER: Thank you, Mr. Chairman. You referred to the historical process of -- and number of public hearings, and I'm wondering -- I have a question, and then I have a follow-up.

In the most recent set of public hearings, because of the fact that Asheville had more people in attendance at previous hearings than any other ones in the state, we were sort of -- we were taken offline and there was not like a direct feed into the ether of all the comments that were coming from Asheville. And what I wondered is are -- were the comments that were taken from Asheville, since we were offline on this last public hearing, were they all recorded and taken into consideration as a part of this Congressional map 2A that we're looking at and the House map that we are -- that we just seen, the two maps?

REP. LEWIS: Yes, ma'am.

REP. FISHER: So those were all on -- follow-up.

SENATOR RUCHO: Follow-up.

REP. FISHER: So there is a record of all of those comments that have fed into this latest iteration of the Congressional map and of the House map?

REP. LEWIS: Yes, ma'am. And if I could add, we also sent one of our Chairs, Representative Dollar, to make sure that we got direct feedback, ears on the ground, not just the transcripts and the audio to review. So the answer is, yes, ma'am.

REP. FISHER: And one follow-up.

SENATOR RUCHO: One follow-up.

REP. FISHER: Thank you. The procedure for issuing online comments, how long will you be referring to those comments that are being put into the record on line and, you know, for what period of time will they be considered?

REP. LEWIS: Representative, it's our intent to maintain that link until these plans have passed both the House and the Senate. Every week the Chairs receive a report of those comments that were sent in that we read and review. Those comments are also a part of the general public record that anybody may review at their discretion.

REP. FISHER: Just one last follow-up.

SENATOR RUCHO: One more.

REP. FISHER: Is there a cutoff date for receipt of those online comments? Because we're going to continue to have maps with changes, I'm assuming, all throughout this process, adjustments

to what we've already seen and been able to comment on at the public hearings. Is there a cutoff point for receiving and acting on comments?

REP. LEWIS: Representative, we have not discussed an exact cutoff date. It certainly will not be before the plans have passed both the chambers. My estimation is the earliest -- the earliest that the comment -- the on-line comment page would be shut down would be August 1st, after we adjourn, not before.

SENATOR RUCHO: All right. I agree with you. Yes, it will be at the decision of the Chairs, and right now we want to hear those comments up until the point where those maps are, you know, fixed because of the vote of the House and the Senate and agreement.

Representative Hackney.

REP. HACKNEY: This question is for Representative Lewis. I guess, why did you depart from the existing map in such dramatic ways? There are certainly ways to use the existing map to equalize the numbers. And who was it that urged you to do that?

REP. LEWIS: Representative Hackney, the lines were redrawn to reflect the 1.5 million

people that moved into our state in the past decade. I would reiterate that we have requested input and maps from you and from all other members.

REP. HACKNEY: Follow-up. What analysis did you go through to bring you to the conclusion that District 1 needed to be raised above 50 percent by voting age population? Was there analysis that was performed to do that or was that just something that you all decided to do?

REP. LEWIS: Representative, the most recent court case, in 2009, as you recall, the Pender County case Bartlett versus Strickland, I believe, defined that a majority of minority districts meant 50 plus one. It seems intuitive to me that majority-minority means that there are a majority of minorities.

SENATOR RUCHO: Follow-up.

REP. HACKNEY: Follow-up. Thank you, Mr. Chair.

So it was your opinion that that was a required thing to do under the law?

REP. LEWIS: Yes.

SENATOR RUCHO: I have Senator McKissick for a question.

SENATOR McKISSICK: This will be perhaps a

short series of questions.

SENATOR RUCHO: Through the chair.

SENATOR McKISSICK: Let me ask you this: did you all use staff or consultants other than legislative staff to help draw the Congressional maps as we see here today?

REP. LEWIS: Senator, we obtained legal opinions from the North Carolina Attorney General's Office and also through outside retained counsel as has been the practice since 1991.

The bulk of the map that you see was drawn by Mr. Hofeller. The map was refined by General Assembly staff in the extent that they found inconsistencies with the map. And I can give you an example that we have -- as you know, the way the mapping program works, it uses the Census blocks. There are many Census blocks in the state which have zero population, and an example might be a very large patch of land that has to be reserved over a giant road overpass, and our staff was very -- as those blocks contain no people, the staff -- our staff here was very helpful in pointing out that they still had to go somewhere, so I tried to answer as thoroughly as I can.

SENATOR McKISSIK: Just follow-up.

SENATOR RUCHO: Follow-up.

SENATOR McKISSIK: In terms of legal staff that you used, what firms or persons could you identify, and will those people be available to us to ask questions if we had questions or need some of the details on the plan?

REP. LEWIS: The Attorney General staff, we met with -- and I will not attempt to get their exact title correct. We met with Tiare Smiley and Alex Pierce, both of whom are either Chief Deputy AEGs or something. I don't know their exact title. They were designated for us to meet with in a series of two meetings that was actually held with Attorney General Cooper, who instructed us to deal with them on his behalf.

In addition to that, as was established in 1991, the Speaker, the President pro tem, and the two Senior Chairs, Senator Rucho and myself, obtained outside counsel through the firm of Ogletree Deakins. The names of the two attorneys that we have dealt with at Ogletree are Phillip Strach and Tom Farr.

It is my understanding of the relationship between Ogletree and the leadership that they are counsel to the four and not to the committees.

SENATOR McKISSICK: Would we be able to ask them any questions or not?

REP. LEWIS: No, sir.

SENATOR RUCHO: No. The answer to that question.

SENATOR McKISSICK: Let me ask you this: in terms of the computers that were utilized to draw the maps, I understand Maptitude was available here in the General Assembly, as you indicated, but was the Maptitude systems used here in the General Assembly the only systems used for drawing the maps or was there outside computers used for drawing these maps as well?

REP. LEWIS: Not only were there outside computers used, there were outside companies used. Redistricting this year has taken on excitement. People had access to free online services. One in particular called Dave's Redistricting that a speaker in Asheville used to present us a plan that largely was adopted and is what you see before you as the First -- as the First Congressional District.

SENATOR RUCHO: Follow-up.

SENATOR McKISSICK: Follow-up, please. Would we be able to, if we needed to, access

outside computers that might have been utilized or where those resources were?

SENATOR RUCHO: No, sir.

SENATOR McKISSICK: Okay. And follow-up, please. In terms of the data that was used in, say, for black voting age population, there was some subtle distinctions between data that was available earlier through the committee and the House maps and the data that came to us later, particularly as it dealt with voting rates, so the numbers did not exactly -- they weren't consistent.

To what extent was it interpreted which set of numbers would be utilized and why?

REP. LEWIS: Pardon me. One moment, sir.

Senator, all the information that was used was downloaded from the State's system. We used what the State refers to as any part black voting age population. That was the number that we used.

SENATOR McKISSICK: Were you aware -- quick follow-up. Were there distinctions between numbers provided earlier on and the ones that came to us later?

REP. LEWIS: If I may, Mr. Chairman.

SENATOR RUCHO: Yes, sir.

REP. LEWIS: Did you provide those to us?

SENATOR McKISSICK: They came to us through the committee. They were disseminated and distributed to us. There was subtle distinctions between the data that was provided in terms --

SENATOR RUCHO: All the data that everyone used that was eligible came from the ISD who put the database together when we received the census material in mid -- in February and mid March. That same day that you used in your computer material as in the other minority party members is the same data that everyone else used.

SENATOR McKISSICK: Quick follow-up.

SENATOR RUCHO: Follow-up.

SENATOR McKISSICK: Let me ask you this: for the First Congressional District, I know there was concern about -- since it was in a sanctified area of the initial plan, Rucho-Lewis plan, that came forth, what I'll call the finger counties, more or less, were omitted from the plan. Of course, now I see that there were portions of those counties included.

Could you elaborate as to what the justification was and the rationale for the plans that we see before us now in contrast in comparison to your earlier plans for District 1 in particular?

REP. LEWIS: The plans have changed based on the concerns expressed in large part by Representative Butterfield and our attempt to make certain that we included additional Section 5 when possible.

SENATOR McKISSICK: Thank you.

SENATOR RUCHO: Senator McKissick, question for you. We worked very hard to be sure that we complied with all the previous precedents that have been set by previous redistricting committees. And to go back to your question about access to attorneys. Do you recollect in 2003, they were private counsel, was that attorney in the private counsel open to committee questions?

SENATOR McKISSICK: I do not know the answer to that question. I wasn't serving in 2003.

I was more or less concerned about whether -- based upon what we were hearing about the way the plan was organized and whether the internal logic or thoughts that were implicit in that was data that would be available to us now or likewise, the numbers that were utilized, if there was some justification from legal counsel or from outside parties as to what numbers would be best utilized based upon requirements from Section 5,

Section 2, in the case law.

SENATOR RUCHO: To respond to your concern, if you paid close attention to the statements that Representative Lewis and I put out, that was clearly delineated within those statements as to how the entire criteria was established and to what areas we were looking at that were going to be in compliance with what the Justice Department expected us to do as part of our submission. Okay.

SENATOR McKISSICK: Thank you.

SENATOR RUCHO: All right. I have Representative Stam.

REP. STAM: Chairman Lewis, have you received the proposed Congressional District alternate plan from any member of the House or Senate minority party?

REP. LEWIS: No, sir.

SENATOR RUCHO: Okay. I have Representative Hackney, another question.

REP. HACKNEY: Representative Lewis, what is the plan for complying with Section 5? Where and what procedure do you plan to achieve new clearance or attempted pre-clearance of this plan?

REP. LEWIS: Representative Hackney, we're in consultation with the Attorney General's Office

and also with our private counsel. The preferred method at the moment is to do what this General Assembly did in 2003, which is to seek pre-clearance through the District Court and the District of Columbia. Another possibility is to seek a joint strategy where we file with both the Department of Justice in DC that was recently done in the state of Virginia and ultimately resulted in pre-clearance before the Court.

REP. HACKNEY: I have a follow-up.

SENATOR RUCHO: Follow-up.

REP. HACKNEY: Is that plan for all three submissions?

REP. LEWIS: Yes, sir.

REP. HACKNEY: And, Mr. Chairman, if I may follow-up to my earlier suggestions. I wonder if you followed the advice from Congressman Butterfield about the matter of his pushing his district over 50 percent as you contend is required.

Did you consult with Congressman Butterfield about that, and did he advocate for pushing it over 50 percent?

REP. LEWIS: The last consultation with Congressman Butterfield was a written letter that

he sent and was read into the public record at the Ahoskie site I believe on July 18th.

REP. HACKNEY: Follow-up, Mr. Chair.

SENATOR RUCHO: Follow-up.

REP. HACKNEY: Did you give any input suggesting that -- any input from the African-American community suggesting that that needed to be made into a majority African-American district? I don't recall any.

REP. LEWIS: We believe that the districts that we have presented are made in all 13 districts in accordance with the law and would have been happy to evaluate anything that your office would have submitted to the contrary or anything that any other organization or group would have submitted to the contrary.

SENATOR RUCHO: Okay.

REP. HACKNEY: Thank you.

SENATOR RUCHO: Thank you, sir. I have Senator Walters.

SENATOR WALTERS: Thank you, Mr. Chair. As we've heard today, there's been a great deal of attention paid to the five counties in the First Congressional District which are included in the 40 counties of the Voters Rights Act and those

counties have been moved out and moved back in.

However, it appears there's been very little attention paid to the fact that Robeson County is one of those counties which is the poorest and most diverse county in the state, I might add, that those maps are significantly Hoke and Robeson where we ended up with two Congressional districts where we have a huge population of the Lumbee Indian tribe of about 55,000, who I asked the question in this committee prior was any consideration going to be put in that regard.

And I was just wondering what consideration have we had in looking at the population -- diverse population in these poor counties in the eastern North Carolina as they're split into two to three Congressional districts.

REP. LEWIS: Thank you, Senator. As I state in my opening remarks, it was believed that -- to have the voices of two members of Congress serving on various committees in the United States Congress will actually benefit the areas that are split among more than one.

SENATOR RUCHO: Follow-up.

SENATOR WALTERS: Thank you. Also with

the Senate Congressional Districts, Congressman McIntyre who served on the Armed Services Committee for the last ten years or more serving Fort Bragg for that district who has taken out of that Congressional district now.

You know, the continuity between what we do in our military today and North Carolina being the military-friendly state that it is, are we giving any consideration to how we are protecting our military bases and their representation?

REP. LEWIS: Yes, sir. I apologize for not having the current map before me. I thought I did. Fort Bragg has been represented by the Second for the past ten years.

SENATOR RUCHO: Representative Lewis, we can put that on the screen right now, if you'd like.

REP. LEWIS: If you're waiting for the response. I apologize. The post of Fort Bragg has been split between the Second District, which is seen in brownish orange color, and part of the Eighth, which is split -- which is that light teal green.

If you'd like to speak further about Camp Lejeune in Onslow County, is still a part of the

Third. And I apologize for not knowing the exact locations of the other important military installations.

SENATOR RUCHO: As another point, as those maps were drawn, you have to recognize the zero deviation because of one person, one vote. There is a loss of flexibility as you start approaching the 733,494 number, so it takes -- it's challenging to make sure we include all counties when you hit that magic number, so just for your information.

All right. I've got Senator Nesbitt for another question.

SENATOR NESBITT: Thank you, Mr. Chair. I want to go back to the First District a little bit and ask -- you were receiving opinions from various people. Have you received any legal opinions that state that the original First, as you drew it, was not in compliance with the Voting Rights Act?

REP. LEWIS: No, sir. We thought that it would and received opinions that it would clear.

These changes were made because we were attempting to be responsive to comments received at the public hearings that were held.

SENATOR NESBITT: So the opinion was that you could exclude Section 5 counties that had been

in a minority district and that would not be considered retrogression? Is that basically what you were told?

REP. LEWIS: Representative --

SENATOR NESBITT: What you were told. That may be better.

SENATOR RUCHO: Come through the Chair with your questions, please.

REP. LEWIS: Representative Nesbitt, there are Section 5 counties that are not part of the first map. They were part -- there are Section 5 counties that were not part of the First in 2001. There are Section 5 counties that were not part of the First in 1991.

SENATOR RUCHO: Follow-up.

SENATOR NESBITT: And, Mr. Chair, I'll be glad to ask you these questions would be fine with me. You're the Senate chair.

SENATOR RUCHO: Chairman Lewis is presenting this bill, and if I need to consult with him, I will.

SENATOR NESBITT: All right. Well, the question I would ask you is as to those counties which are currently in the First that are Section 5 counties, is it your -- was it your legal opinion

that you could exclude those counties from the current district when it was not necessary and not have retrogression?

REP. LEWIS: We felt that Rucho-Lewis 1 was a legal plan that would obtain clearance.

SENATOR RUCHO: May I help you with that? Just for your knowledge, our understanding that is retrogression is determined statewide, not specific counties.

And secondly, there were some additional Section 5 counties added to the First District as others were deleted.

And the response of Representative Lewis and myself was to do our best to go along with Congressman Butterfield's suggestions and concerns, and we believe that the first map was legal, fair and would have met pre-clearance approval and this map above with District 1 the way it is now will also meet pre-clearance approval.

SENATOR NESBITT: Follow-up.

SENATOR RUCHO: Follow-up.

SENATOR NESBITT: Did you explore or did you discover other ways to figure First District, including more of those five counties that were previously covered?

REP. LEWIS: Representative Nesbitt, the current design that you have before you at your desk was largely a result of public input that came from a private citizen in Asheville.

We would have been glad to have viewed any plans that your office sent in full.

SENATOR NESBITT: I understand. I've got an expert in Asheville on the first.

SENATOR RUCHO: Follow-up.

SENATOR NESBITT: Yes, sir.

SENATOR RUCHO: Okay.

SENATOR NESBITT: Can you tell who my expert in Asheville is on the first Congressional District?

REP. LEWIS: Senator, I don't recall his name. I remember there was great hype because he also calls himself rogue mapo, and he was very active on the blogosphere, or whatever that's called. And when we found out that he was going to present in Asheville, we were very interested in what he had to say. And we can go back there, sir, and get you his name because he did actually state it for the record. I just don't recall it.

SENATOR RUCHO: Follow-up.

SENATOR NESBITT: Yes. I wanted to ask

one question now that you've gone to Asheville just as a matter of interest. I notice from your statistics the Eleventh, as you've drawn it, has the lowest minority population of any of the districts.

Can you tell me what your thinking was to move the only significant minority population in the far west and Asheville out of the Eleventh and into the Tenth?

REP. LEWIS: The only thinking was that Asheville deserved the same opportunities to be represented by more than one member of Congress.

The area that was chosen under the drawing that you see is a neat, contiguous fit to the Tenth. Again, we would have been glad to review any other drawing that were submitted to us.

SENATOR RUCHO: Follow-up.

SENATOR NESBITT: Did you look at the makeup of the population as you were moving out of that area and realize that you were moving the only significant minority population other than American Indians that existed in the western part of the state out of that district and into the other one when it already had a low percentage?

REP. LEWIS: No, sir, I did not.

SENATOR RUCHO: Well, I have Representative Rapp question.

REP. RAPP: Thank you, Mr. Chair. The question I was going to ask was raised by Senator Nesbitt.

SENATOR RUCHO: Thank you, Senator Rapp.

Representative Hackney, do you have a question?

REP. HACKNEY: I do. And I would like to direct your attention now that you have the maps up to the central part of the state, Districts -- as you have been designated -- 6, 4, 2 and 8, and I'd like to discuss the issue of the compactness with you just for a minute and get your thoughts.

I've heard the Fourth District, which has been basically a Triangle-centered district since the 1930s, as I recall it, I've heard it described in this map as Italy. You have the Adriatic Sea on one side to the east and I guess the Mediterranean on the other side and Sicily down at the Hoke County line.

And I wondered what standard of compactness you used in designing the Fourth District, particularly since the Twelfth District and the First District, at least in your opinion, taken

care of on either side there are no important Voting Rights considerations that would be apparent there, so what was the standard of compactness that was used for the Fourth District?

REP. LEWIS: Representative Hackney, as you know, compactness is one of the factors that can be considered. We believe that the Fourth is compliant as a compact -- viewed as a compact district.

SENATOR RUCHO: Yes, sir. Follow-up.

REP. HACKNEY: Yes. I wondered if you could comment on the -- just take Harnett County, for instance. What is the difference between the population in the Fourth District and that in the Second District in Harnett County, for instance?

REP. LEWIS: Representative Hackney, we've already expressed that we see a benefit, as has been established by prior General Assemblies, of having more than one member of Congress that represents an area.

I think this is -- as the representative elected from Harnett County, I think it will be a good thing to have more than one voice.

REP. HACKNEY: Follow-up.

SENATOR RUCHO: Follow-up.

REP. HACKNEY: So could you not have attempted to get as many Congressmen as possible in as many areas as possible, could you not have just made a sliver all the way down to New Hanover and Brunswick, the Fourth District, also in order to achieve -- further achieve that purpose?

REP. LEWIS: I'd be glad to review any plans you submit.

SENATOR RUCHO: Representative Hackney, I wasn't here at the original time, and apparently you were when apparently compactness of the Twelfth District was designed by y'all and was approved by the courts, so if you're talking about compactness and you approved the Twelfth and the original First, then I would assume that the Fourth would probably fall in line with those. Don't you agree with that?

REP. HACKNEY: May I respond, Mr. Chair?

SENATOR RUCHO: Yes, sir, please.

REP. HACKNEY: As you well know, the Twelfth District was drawn specifically for voting rights purposes. The Fourth is not. So the standards that you're talking about, your comment is just not applicable.

REP. LEWIS: Representative Hackney --

Mr. Chairman.

SENATOR RUCHO: Yes, sir, please.

REP. LEWIS: Would you state what case in which it was affirmed as a Voting Rights -- as a Voting Rights district? The information that we have is that it was affirmed as a strong Democratic district, not a Voting Rights district.

REP. HACKNEY: Well, Mr. Chairman, as I understand this committee meeting today is an opportunity for us to ask you questions, not for you to ask us questions, and so that's the spirit in which -- this is your map, you draw it, and so my questions are about your map.

SENATOR RUCHO: Thank you.

Just as a matter of information for the committee, O'Reilly versus Hunt was the case that surrounded the Twelfth Congressional District vote.

REP. HACKNEY: Follow-up.

SENATOR RUCHO: Yes, sir.

REP. HACKNEY: Whether it's a Voting Rights district or not, it was drawn for the purpose of advancing the African-American representation in the United States Congress. The Fourth District is not, and so the point I made, which is equally applicable, which is that the

Fourth District could have been made compact and has not been.

REP. LEWIS: Mr. Chairman.

SENATOR RUCHO: Yes, sir.

REP. LEWIS: The Twelfth Congressional District was not drawn, as was argued by the State of North Carolina as a VRA district, to advance the interest of minorities. What is being stated is incorrect.

SENATOR RUCHO: Follow-up, sir.

REP. HACKNEY: Is it not the case that the Twelfth District has been represented by Representative Mel Watt, who happens to be African-American from its inception to the current time? And does that not advance an African-American interest in your opinion, Representative Watt being in the United States Congress?

REP. LEWIS: Representative Hackney, the Twelfth was drawn in the prior two plans, and this plan, as a very strong Democratic district.

I have already said in my opening remarks that we include whole precincts in this district that voted strongly for President Obama. It is a Democratic district. I have no comment to offer on the service of Congressman Watt. As far as I know,

it is very, very good. He's very, very good.

SENATOR RUCHO: Thank you. Going on to Representative Floyd.

REP. FLOYD: I would direct the Chair that Representative Lewis did not have the correct map when making his representation.

SENATOR RUCHO: Sorry. I thought you had a question.

I have Senator McKissick, question.

SENATOR McKISSICK: I would like to go back to the First District for a quick minute. And, of course, we have the plan Rucho-Lewis Congress 2A. Could you go put back on the screen the map that shows the current districts for a moment. I guess I want to ask one or two questions that relate to the current configuration compared to what we have before us.

And what my question is related to specifically as to Pasquotank County, Perquimans County, Chowan and Washington and Gates. As you can see marking those whole counties in their entirety all within the First District. Now, what was the logic and justification, rationale, so to speak, behind now including only four counties of these particular counties and why as to these

particular portions that we now see in the plan?

REP. LEWIS: Senator, as I've tried to explain earlier in my remarks, not only were we tasked of finding 97,536 people, but we were tasked with keeping the African-American percentage over 50 percent.

It would be a very fair assumption that the areas of the counties in which you speak helped with -- would help achieve that goal of finding the correct --

SENATOR RUCHO: Yes, sir, before we take your follow-up, each member of the committee has a copy in their notebook of the existing Congressional map that Senator McKissick is alluding to so it's available to you.

Follow-up question.

SENATOR McKISSICK: When you refer to the 50 percent, of course, today, this particular First District that is 50 percent is not 50 percent black voting age population; is that correct?

REP. LEWIS: Pardon me. I don't have that.

SENATOR RUCHO: At the present time, it's 48.63.

SENATOR McKISSICK: Okay. And I'm just

trying to make sure I understand what you are identifying as the law that would require you to reach 50 percent as the threshold. I know you referenced earlier the pending case that were referring to legislative districts, but was there ever a legal opinion provided you that it was controlling as to the racial composition of Congressional Districts?

REP. LEWIS: Just to clarify, Senator, we did not -- we did not seek legal opinion or -- in other words, we understand the difference between a state court ruling on state maps than on a federal court ruling on federal map.

Based on the advice of counsel that we received, the first was contingent to be a majority minority seat. Majority-minority means more than a majority, and that's how it was drawn.

SENATOR RUCHO: Senator, also the fact that Section 2 Voting Rights Act is addressed via the Strickland decision on Congressional under the Voting Rights Act.

SENATOR McKISSICK: Follow-up, if I can.

SENATOR RUCHO: Yes, sir.

SENATOR McKISSICK: In terms of precinct splits that are embodied within the map that we see

now as 2A, do you have any idea how many precinct splits we're looking at here as compared -- as to what we have in terms of our current plan bill, 2003 plan?

REP. LEWIS: Yes, sir. If you'll give me just a moment, I do actually have that.

SENATOR McKISSICK: If we could have the precinct and the county splits, that would be helpful.

REP. LEWIS: I apologize that I do not have this in this notebook. I've been informed by Chairman Rucho that prior to the Senate committee meeting at 2:00 that information will be provided to all the -- to all of the members of the Senate committee, and I will commit that it will be -- that it will be provided to members of the House as well when we reconvene at 5:00.

SENATOR McKISSICK: Thank you, sir.

SENATOR RUCHO: I have Representative Pierce.

REP. PIERCE: How many Congressmen were drawn out of their home district and what were the basis for that? How many were drawn out of their home district and what was the basis for that?

REP. LEWIS: In Rucho-Lewis plan 1, there

was none. In Rucho-Lewis plan 2A, there are four members of Congress that are in the same Congressional District.

REP. PIERCE: Just follow-up, please.

SENATOR RUCHO: Yes, sir, follow-up.

REP. PIERCE: You answered that, but how many were drawn out of their home district as it relates to down our way, Robeson County?

REP. LEWIS: Representative Pierce, in trying to draw a Congressional map, as we've stated before, there is supposed to be a zero deviation in the population. As the First evolved into a different shape, the Third then evolved into a different shape, the Second evolved into a different shape.

So to answer your question, only two were drawn into districts that they do not currently -- excuse me. Only two reside in districts in which they do not currently represent, but I think it's fair to also point out that there is -- the only residency requirement as defined by the U.S. Constitution is that you be a resident in the state in which you win.

REP. PIERCE: Thank you, sir.

SENATOR RUCHO: I have Senator Blue.

SENATOR BLUE: Thank you, Mr. Chairman. Representative Lewis, I'm interested in because of the shape in population of the First and Twelfth, question in how is your concept of packing since both those districts have greater than 50 percent minority African American.

REP. LEWIS: Senator Lewis, my understanding is packing has been defined by the Supreme Court as placing so many minority residents into a district that you are precluded from drawing a second minority to a second minority district.

SENATOR BLUE: Follow-up.

SENATOR RUCHO: Follow-up.

SENATOR BLUE: So it's your belief that putting more minorities into a district than historically has been required to elect and allow the citizens in that district to elect a representative of their choice is not packing?

REP. LEWIS: Senator, packing is defined by the Supreme Court.

SENATOR BLUE: Let me ask you, if I could.

SENATOR RUCHO: Follow-up, sir.

SENATOR BLUE: The current black percentage in the Twelfth Congressional District, that is, in the 2001 plan, it is considerably less

than it is under Rucho-Lewis 2A.

REP. LEWIS: I know it's less, yes, sir.

SENATOR BLUE: And follow-up.

SENATOR RUCHO: Yes, follow-up.

SENATOR BLUE: And the current African American population and voting age population in Congressional District 1 is less under the current, that is, 2001 plan and 2003 plan, than it is under Rucho-Lewis number 2A.

REP. LEWIS: Please forgive me, sir; I did not follow what you were asking.

SENATOR BLUE: You've got more African Americans under Rucho-Lewis 2A in Congressional District 1 than currently reside in Congressional District 1 under -- the percentage, that is, under the 2001 and 2003 plan.

REP. LEWIS: Under the 2001 plan, I believe the number had fallen to 48 percent and 97,000 people short. The current plan does have it over 50 percent, yes, sir.

SENATOR BLUE: Follow-up.

SENATOR RUCHO: Yes, sir.

SENATOR BLUE: The views and analysis of Congressional District 12, the idea that it was a democratic performance district as opposed to a

minority of Voting Rights Act district, Section 2 district.

REP. LEWIS: Yes, sir.

SENATOR BLUE: What standard did you use to determine the partisanship, that is, the democratic partisanship, of the competitiveness in District 12 as compared to the party competitiveness in the other districts? In your initial comments you said all the districts were more competitive.

REP. LEWIS: If I said that, I misspoke. The Twelfth as it was originally drawn and pre-cleared was drawn as a strong Democratic performance district. It was redrawn under Rucho-Lewis 2A. We used the vote for President of the United States in 2008.

SENATOR RUCHO: Follow-up.

SENATOR BLUE: So does that mean you're drawing again as a partisan competitive district, that is, you're putting the population in it for partisan reasons rather than race reasons?

REP. LEWIS: Yes, sir.

SENATOR BLUE: Follow-up.

SENATOR RUCHO: Follow-up.

SENATOR BLUE: Did you look at the racial

makeup of the precincts, census track and other components of it as you built that Congressional District?

REP. LEWIS: No, sir. We did after we submitted it and the specs that you have and on line came out.

SENATOR BLUE: Follow-up.

SENATOR RUCHO: Follow-up.

SENATOR BLUE: And Congressional District 4, Chairman Lewis, you came into Wake County, in fact, you came into my precinct, my Senate district. Did you look at the racial makeup of my Senate district before you moved it into the Congressional District 4?

REP. LEWIS: No, sir.

SENATOR BLUE: So you have not looked at the racial makeup of any of the districts that were drawn up here until after they were drawn?

REP. LEWIS: Not in drawing Four or Twelve. We did when we drew One, yes, sir.

SENATOR BLUE: Follow-up.

SENATOR RUCHO: Follow-up.

SENATOR BLUE: I noticed that the other terminus in District 4, it is Cumberland County and Fayetteville. Did you look at the racial makeup of

District 4 in Fayetteville prior to or after the district was drawn?

REP. LEWIS: I did not look at it prior, no, sir.

SENATOR RUCHO: Follow-up.

SENATOR BLUE: And so it wouldn't surprise you to know that both the district makeup for Wake County and the Fourth Congressional District is overwhelmingly from the black community as well as the makeup in Cumberland County, or have you discovered that since the district has been redrawn?

REP. LEWIS: What I have discovered, Senator Blue, is that under the 2001 plan was passed -- 2001 plan was passed, the Fourth District -- the Fourth was 49 percent -- pardon me -- 49 percent Democrat and it is now -- it is now 55.12.

SENATOR BLUE: Follow-up.

SENATOR RUCHO: Follow-up.

SENATOR BLUE: And is that percentage after you put in the black population of Wake County and Cumberland County in your new Fourth District?

REP. LEWIS: That percentage as you

see in the Fourth was in the plan before.

SENATOR BLUE: One last question.

SENATOR RUCHO: Yes, sir, follow-up.

SENATOR BLUE: What kind of Section 2 analysis did you perform on District 12 before you finalize the map?

REP. LEWIS: Senator Blue, we received legal counsel advice that -- as section 12 has been largely the same for 20 years and has been a part of the pre-clearance process of our map that it was a good bet that if we kept section 12 -- excuse me -- if we kept District 12 largely the same that it would not be an impediment to getting our map cleared.

SENATOR BLUE: Last one.

SENATOR RUCHO: Yes, sir, one more question.

SENATOR BLUE: Do you contend that essentially the same -- the 50 plus percent African American population is 41, 42 percent African American population?

REP. LEWIS: Senator Blue, I do not recall at the top of my head what the benchmark of District 12 was. As I can tell you, we attempted and we did use -- except where we had to split

precincts for population reasons, we -- the only factor that was -- the only variable was the 2008 race for the presidency.

SENATOR BLUE: One final follow-up.

SENATOR RUCHO: Last question.

SENATOR BLUE: You indicated you had a photographer, mapmaker, whatever you want to call it. Did you tell him, that is, you, Senator Rucho and Representative Dollar, tell him what precincts or census tract or whatever other geographic unit you may have used to put into the Twelfth District and the First District or did he just do it on his own?

REP. LEWIS: No, sir. He did not do it on his own. After the advice of counsel explained to us that the Twelfth was approved as a strong democratic district, we instructed him to use whole precincts which voted for President Obama instead of Senator McCain.

SENATOR RUCHO: Mr. Chairman, just a question for Senator Blue.

Senator Blue, throughout the media you've talked about packing and you asked us the question. I think for the benefit of the committee, would you please give us your definition of packing and, more

importantly, where it's verified by any court decisions would be very helpful so we can understand your criticisms of the map.

SENATOR BLUE: Senator Rucho and Representative Lewis's responses to my present view where I said you were packing, I did not refer to relevant Supreme Court decisions in describing that, but it's about like Justice either Black or Douglas said about pornography, those who know it know it when they see it.

And so when you're putting unnecessarily high numbers of African-Americans in a district under the pretext of satisfying the requirements of the Voting Rights Act, the policy issues in my neighborhood and in the places where I move around in is that you're stuffing people and cramming them into districts so that you can get them out of the way of other districts.

SENATOR RUCHO: So I assume that you had no legal background or basis on that analysis that you made.

SENATOR BLUE: Only 38 years of practicing law.

SENATOR RUCHO: We may need to see a court decision on that, sir. Thank you.

Okay. I have Representative Floyd now.

REP. FLOYD: Thank you, Mr. Chair. I just want to ask a question or several questions, and one from the first representation that we saw North Carolina grow by 1.5 million citizens. Just where did that growth take place?

REP. LEWIS: Representative Floyd, let me begin my response by saying that all of the Census information is on the website.

Most of the growth occurred around the Mecklenburg area and around Wake County area. There was also growth throughout the Triad area that exceeded the state average but was not quite as much as around Charlotte and around the greater Raleigh.

REP. FLOYD: Follow-up, Chair.

SENATOR RUCHO: Follow-up, sir.

REP. FLOYD: Basically central North Carolina; is that a correct?

REP. LEWIS: Representative Floyd, I would define Mecklenburg County as an important hub in our state. I don't -- maybe you would define it as being in central North Carolina. Maybe you would define it as being in western. Maybe you define it as Piedmont. I can't answer that.

REP. FLOYD: Thank you, sir. Basically, when we as North Carolinians look at North Carolina and we divide it, we look at Piedmont, there's the western to Piedmont and the coastal region. That's how we basically define it. And as we look at Charlotte to Raleigh, we consider that that is the economic engine that drives our state.

And so when we look at that population in that central part of North Carolina, my question is: if that's the case, then, you know, it looks like a lot of shifting left and right when basically growth -- population growth is in the central part of the state.

SENATOR RUCHO: Representative Floyd, I think you're accurate because, in essence, I think the districts in the east and the west which didn't -- we all grew, and I think it was nine percent, but the I-85 corridor seemed to pick significantly more of the 1.5 million people. That's why it shifted towards the middle.

REP. FLOYD: Follow-up.

SENATOR RUCHO: Yes, sir.

REP. FLOYD: And then in my community, we were blessed to have 2, 7 and 8 when we started. Now we have 4, 2 and 7 now, and we look at that as

Fort Bragg and our community, as I've stated many times, we're going to have about 28 to 32 general with just over a billion dollars per month for expenditures up there, and to look at this, you know, we are a military-friendly state. This raises some questions about that, so that's just my comment.

SENATOR RUCHO: Thank you, sir.

I missed Senator Jones. And I want to say publicly, Senator Jones, thank you very much for attending each of our public hearings. You are a loyal soldier in helping us get this done, and we appreciate your expertise and your willingness to help. You have a question.

SENATOR JONES: Thank you, Mr. Chair, and I was obliged to do it.

My question is that when I look at this map that's on the screen and I'm looking at the Congress 2A, and my feelings are that when my children will later on become adults in ten years that we still have a race as a major issue. And I look at the way the counties in Perquimans and Pasquotank and so forth, those little yellow spots in there, I think some of it alienates whether you're black and white, why we have to do that, I

mean, other than just to get populations.

So I guess the feeling of what I am more concerned about is that we had put race -- race is at the head again. No matter what we do, we keep getting race at the head no matter what we do and we're not going forward. When we have these opportunities to change the way North Carolina is seen and viewed, we have not done that.

It might still get people elected to different offices and everything, but have you looked at the color of a person's skin? Have we done anything on that yet? And I don't think we have.

I think that sometimes we still draw these maps so that it's by a perception and not so much about the overall view of how we as North Carolinians can be. Either you're a Democrat or you're a Republican, either you're black or white or native American. Sometimes we have to take a look at where we are at. We're all North Carolinians here.

So again, I don't want to walk across the street, he's represented by him because who he is because of who I am. If we can all be more compact than that, I think we can all be a better

North Carolina as a whole.

SENATOR RUCHO: Thank you, Senator Jones, well said.

Senator Stein, good to see you this morning.

SENATOR STEIN: Thank you, Mr. Chairman.

Representative Lewis, you said in response to some of Senator Blue's question as to why you all opted to put greater than 50 percent African Americans in District 12 and District 1 that you had a legal memo. Perhaps to be able to evaluate whether to vote for such an act, can you please make that memo available for our review as well?

REP. LEWIS: Senator Stein, the record can certainly correct me, I don't recall using the word "memo." I said that we had legal counsel advice to do so.

SENATOR STEIN: So no written memo about this greater than 50 percent packing issue?

SENATOR RUCHO: Senator Stein, to help on this, and I'm sure you've read all of the statements that were made, but that was clearly delineated in the statements and the appropriate background that was present there and also in the legislative guide.

SENATOR STEIN: Thank you. And follow-up.

SENATOR RUCHO: Follow-up.

SENATOR STEIN: You had also mentioned in your initial statement, Representative Lewis, about the competitive nature of the districts and that you then stated that you all looked to the 2008 presidential election to determine what the democratic performance would likely be in a district.

And I note that in 2008, according to the maps that we're being asked to consider, Democrats won three and Republicans won ten. And if you look at the most recent state-wide election, the U.S. Senate race, it's also a ten to three split. And in none of the ten races where the Republican prevailed in your proposed districts did the Democratic candidate exceed 38 percent.

So how can you -- when the state splits at about 54 percent -- as I understand it, in 2008 democrats won 54 percent of the Congressional votes cast and then 2010 Republicans won 54 percent of the Congressional votes cast. That's a 7-6 split one way or the other. How do you justify going to a ten to three split?

REP. LEWIS: Senator Stein, our first

priority was to redraw all Congressional District to improve upon our original drawing to make sure that it was not a barrier to pre-clearance.

We then had the issue of drawing the Twelfth because even though it is a democratic seat and not a minority seat, there's been more litigation to our knowledge in the Twelfth than any other part of the map, so we wanted to stay as consistent to what the courts had approved before.

If you'll then look -- the rest, as you know, were required to have a zero deviation population, so we drew the lines in such a way as to make them as compact as practicable -- you know what I'm trying to say -- and things fell as they did.

SENATOR RUCHO: Senator Stein, to take it the next step further, if you'd like, what the competitive happens is the fact that since there are larger numbers of Democrat registration in ten of those districts there is a greater opportunity for a candidate to join the unaffiliated voters with a good message and swing over so there will a greater opportunity to win that, and that's what competitive nature is, and that's what it was designed to provide competition.

I've got two more people on board here. I've got Representative Hackney first.

REP. HACKNEY: Representative Lewis, you keep mentioning the legal precedents with respect to packing. And I do note that Professor Joyner of the North Carolina Central Law School provided direct precedents to you in a recent public hearing.

I'm wondering if you're also aware that a Virginia court this week failed Virginia's legislative map on constitution because it packed black voters in a few districts to diminish their political influence and place more black voters into 17 districts, quote, than are necessary or reasonable to give minority voters a reasonable opportunity to elect a candidate of its choice by mandated by Section 5 of the Voting Rights Act and the legislature was ordered to draw a new map.

Were you aware of that?

REP. LEWIS: I'm aware that the Virginia plan was pre-cleared by the United States Department of Justice.

REP. HACKNEY: Follow-up?

SENATOR RUCHO: Follow-up.

REP. HACKNEY: And are you aware that the

Virginia has declared it unconstitutional?

REP. LEWIS: Representative Hackney, I don't follow very much news in the state of Virginia other than to reiterate that the Department of Justice pre-cleared the maps.

REP. HACKNEY: Thank you.

SENATOR RUCHO: And one last person. I have Senator Nesbitt.

SENATOR NESBITT: Thank you, Mr. Chairman.

I want to go back. I think Senator McKissick answered a question about this, but we struggle trying to determine where your numbers on black voting age population came from. They don't seem to be the traditional numbers.

Could you tell us where they came from and if you have an opinion that they are the numbers that we should go by in analyzing our districts. And if so, what is that opinion?

REP. LEWIS: Senator Nesbitt, all of the information that we have came directly from the General Assembly computers which came directly from the United States Census Bureau.

If there is -- if there is an issue with the specific question that you asked, this is the first time that such an issue has been raised. So

all I can base my answer on is the information that we literally took straight from the NCGA computers.

SENATOR RUCHO: Some of that information, if you refer to page number 2 on these Rucho-Lewis statement released on June 17, you'll see a clear explanation of the black voting age population which should explain your question completely.

REP. HACKNEY: Mr. Chair, I'm not sure I would know where to even start looking to find that. If you could just tell us what it says. I was just asking.

SENATOR RUCHO: It's right on the website, and it is -- let's see. I'll repeat it.

In creating new majority African-American districts, we are obligated to follow the decisions in Stephenson 1 and 2 as well as the decisions by the North Carolina Supreme Court and the United States Supreme Court in Strickland versus Bartlett, affirmed by Bartlett v. Strickland.

Under the Strickland decisions, districts created to comply with Section 2 of the Voting Rights Act must be created with a Black Voting Age Population, BVAP, as reported by the Census, at the level of 50 percent plus one. Thus, in constructing VRA majority black districts, the

Chairs recommend that, where possible, these districts be drawn at a level equal to at least 50 percent BVAP.

To determine percentage of BVAP in proposed districts, we have used a more specific Census category listed in our reports as what would be total black voting age population. This category includes persons of 18 years or older who self-identifies as wholly or partially any part black.

It is our understanding that this Census category is preferred by the United States Department of Justice and the United States Supreme Court, Georgia v. Ashcroft.

All right. Seeing no additional questions -- I've got one housekeeping -- if I can find the paperwork that I dropped.

Okay. Some of the guidelines for the members of the committee. And can you take up the house lights a little bit here, please. Excuse me.

Chairman Lewis, any other comments?

REP. LEWIS: No.

SENATOR RUCHO: Thank you so much.

Committee members, as we begin the process of debating the redistricting plans, I would like to provide -- and this is from Representative

Lewis, myself and staff -- I would like to provide information on making drafting requests for amendments, community substitutes or bill drafts.

I ask that all requests for amendments or committee substitutes are compliant with the following: one, be clear in your request. Your request should contain specific instructions to the staff as to the clear intentions of the substance of the amendment.

Two, and very important, contact information. Please include your contact information so the staff can contact you with any questions between the time the request is made and the time the committee meeting at which the amendment will be offered.

Three, be submitted in a timely fashion. Please remember that this is a process that -- in this process timely means sufficient time to develop the map, drafting the amendment and with associated maps, statistics and printing of the package. As you know, that's a lot of work to get these packages together by our staff people. Staff needs -- this can take up to four hours depending upon complexity of the request and other pending requests.

And, also, who to contact. Please route all drafting requests to Erika Churchill in the Research Division 733-2578 or erika.churchill@ncleg.net.

Every effort -- according to staff, every effort will be made to turn around your request in time for it to be offered. Providing a way to contact you and that's why that contact information is very critical. It's important for us to have the staff deliver any amendment or bill.

Seeing no other questions or comments, we'll call this part of the meeting adjourned and we will be meeting this afternoon at 2:00.

We will be meeting downstairs, 544, which I told you earlier.

(Hearing adjourned at 12:07 p.m.)

Voter registration data is estimated since it is collected at the precinct level and districts are created at the census block level.

D = Democratic R = Republican U = Unaffiliated L = Libertarian AI = American Indian

Voters who do not designate a race are omitted from this chart, so the percentages may not add up to 100%.

Voter registration data is estimated since it is collected at the precinct level and districts are created at the census block level.

D = Democratic R = Republican U = Unaffiliated L = Libertarian AI = American Indian

Voters who do not designate a race are omitted from this chart, so the percentages may not add up to 100%.

NCLCV v. Hall
21 CVS 15426
LDTX074

(Transcription from YouTube started at 23:22.)

CHAIRMAN HALL: Today's calendar for the committee, we have the proposed state Senate map which we'll take up first, then we've got the proposed congressional map which we'll take up second. I anticipate -- the chair anticipates having both of these maps on the House floor tomorrow.

With that said, Senator Hise, the gentleman is recognized to debate the proposed state Senate map.

SENATOR HISE: Thank you for the opportunity. I am sure that you all have been highly anticipating the Senate map and looking forward to what changes we may have put together. I will say that as far as the criteria, we have met the plus or minus 5 percent population. There's no point contiguity in the districts.

The things I would like to highlight about the map is that in drawing 50 districts, we only split 15 of 100 counties, we only split 11 out of 552 municipalities, and, finally, we only split 19 VTDs out of 2,647 voter tabulation

districts.

If you have any specific questions, we did take a couple Democratic amendments in the Senate process to change some things, and I'd be happy to answer anything else you may have. It might be important to note we just put the House map through the Senate committee and it went through flawlessly, with no amendments as well.

CHAIRMAN HALL: So the chair will note that the leverage is in our hands now. They've already passed our map so have at it.

Further discussion or debate on the proposed state Senate map.

Representative Cooper-Suggs.

REPRESENTATIVE COOPER-SUGGS: Thank you, Mr. Chair, and thank you, Senator.

My question deals -- my question is in reference to Wayne -- Senator Fitch's district, District 4. And I'd like to know why -- why did you place us in -- with this configuration since -- since we in Wilson county have very little to do with those other two communities of interest.

CHAIRMAN HALL: Senator Hise is recognized.

SENATOR HISE: Yeah. The answer is actually pretty simple when you look at what are Districts 4, 5, and 11. When we followed the Stephenson criteria that exists, District 5 forms a two-county pod which those two counties contain a single-member district; District 4 is a three-county, whole county pod that contains one member; and District 11 is a three-county, whole county pod. All three of those districts were formed by the Stephenson pairings of counties.

CHAIRMAN HALL: Further discussion or debate on the bill.

Representative Hawkins, the gentleman is recognized.

REPRESENTATIVE HAWKINS: I'll yield to Representative Harrison. She had her hand up first.

CHAIRMAN HALL: Representative Harrison, the lady is recognized.

REPRESENTATIVE HARRISON: Well, thank you, Mr. Chair, and thank you, Chair Hise.

I just -- I know that y'all had a healthy debate about the Senate maps in the Senate and these are y'all's maps, but I think

it can't go without saying that a lot of us have concerns about the potential violation of the Voting Rights Act looks like not only Senator Fitch's district, maybe Senator Bazemore, I don't know if there are others, but I think a lot of us feel very strongly that we should have done a racially polarized voting analysis prior to drawing the maps and drawing the VRA districts first.

And I think this map, like the House map, got an F from the Princeton Gerrymandering Project. I think we're looking at litigation, and I think it's unfortunate because we spent $11 million in taxpayer money in the past decade defending indefensible maps. And I just will end it there. Thank you.

CHAIRMAN HALL: Representative Brockman.

REPRESENTATIVE BROCKMAN: Thank you, Mr. Chair, and thank you, Senator Hise.

I have a question about the congress -- or excuse me -- the Guilford county Senate maps and particularly wondering how we got to having a High Point district with someone who doesn't necessarily live in High Point.

I've gotten some feedback from folks who live in High Point who are very much appreciative of High Point getting a Senate district but are kind of wondering how we ended up with someone who actually doesn't live in High Point to represent that district.

CHAIRMAN HALL: The gentleman's recognized.

SENATOR HISE: Districts 27 and 28 were created in this configuration actually by an amendment from the Democrats in that group that changed the split of 27 and 28 into the manner you currently see. It was a north-south split for 27, 28, and that was changed by the Democrats in the committee. They have indicated, when making the map, that there are no VRA issues that they saw in creating that district, and this represented a fair division of that county in these districts.

CHAIRMAN HALL: Representative Hawkins.

REPRESENTATIVE HAWKINS: Yes, sir. Thank you, Mr. Chairman, and thank you, Senator Hise.

My question is about Senate District 2. You know, the question that, you know, is just,

you know, sort of a part of this is how do we speak to compactness, communities of interest, and how do we speak to sort of the eye test for the voter when they're trying to get to know -- I mean, you know, I'd hate to be the senator running in this district for sure, but I do want to make sure that we do ask that question related to how we look at Polsby-Popper, how we look at, you know, compactness, how we look at communities of interest because this -- this does stretch from the Virginia line to the Crystal Coast.

CHAIRMAN HALL: Senator Hise.

SENATOR HISE: Thank you.

Districts 1 and 2 formed an 18-county pod in eastern North Carolina that had to be divided under the Stephenson criteria into a 10-county pod and an 8-county pod. There actually were two possible configurations for what counties make up the 10-county pod and what counties make up the 8-county pod, but that were the only standards that produced four districts that were here, two pairs of two districts that were here.

The Senate chairs are making the

decision for this. In the version we have in front of you, District 1 that is here is the most compact of all the four districts that are drawn. It does conversely change the compactness of Senate District 2, but 1 is the most compact of the four districts drawn.

We looked from public comments of keeping as much as possible what are called the finger counties, the five finger counties possible. This configuration paired four of them together with one of the counties. You can see what it is. The other was a 3-2 so we chose the one that kept more of the finger counties together.

And this looked at the communities of interest for the northern Outer Banks region and keeps the northern Outer Banks region whole in that district versus the other configuration that divided that region.

REPRESENTATIVE HAWKINS: Thank you, Mr. Chairman.

CHAIRMAN HALL: Representative Richardson.

REPRESENTATIVE RICHARDSON: Thank you, Mr. Chair, and I have a question for the

distinguished senator.

Looking at Senate District 21, traditionally, we have very little -- as much as I love Representative Boles, Cumberland does not have a lot in common with Moore. We traditionally have been with Hoke and Robeson or we've been with Harnett, but, I mean, there's this little finger joining Moore in, you know, 21 to Cumberland.

And why did you switch it from Hoke and put it into Moore where we have very little in common with them?

CHAIRMAN HALL: Senator Hise.

SENATOR HISE: We did not split as the Stephenson pairings came together. That is, they are contiguous counties. That is not point contiguity between the two so there actually is an area. And those two counties, Moore and Cumberland, formed a two-county pod with two members. In dividing within, we kept as much of Fayetteville as possible within District 19, created the Fayetteville district. The remainder creates District 21, but it is as simple a question as a two-county pod could be created in that process, therefore it must be

created.

CHAIRMAN HALL: Further discussion or debate.

Representative Carney.

REPRESENTATIVE CARNEY: Thank you, Mr. Chairman.

Chairman Hise, I'm in Mecklenburg county. I'm sorry I have to turn my body. I'm going to complain about this every meeting. That should be in the middle of this room.

Anyway --

SENATOR HISE: I didn't place it.

REPRESENTATIVE CARNEY: -- be that as it may -- I know you didn't do it.

But I've been from Mecklenburg county, and I've been to several of our public hearings, and I've heard from several people, lots of people in north Mecklenburg, and just today I would like to ask you, so I can have an answer for them, why are we now -- the people in northern Iredell have been writing us, asking us not to keep them whole as a county, Mecklenburg, and now it appears that the northern tip of the county is now part of Iredell. Could you just give me an answer to that, please.

CHAIRMAN HALL: Senator Hise.

SENATOR HISE: I will. As I've said with other districts, Iredell and Mecklenburg form a two-county pod. Those two counties are podded together for I believe a six-member district that is in there, so those two have to form. By the transversal rules, the smaller county would be kept whole, so -- and so therefore you must keep Iredell whole. And as you transverse into Mecklenburg county, as you would see, that's a very narrow path to come there, and I believe it is Davidson that is in the northern part. The map that we drew kept Davidson whole in avoiding that, so it did create issues.

I will say specifically on this, the Senate considered an amendment from the Democrats that had asked to remove the double-bunk that that creates, and we withdrew it on committee. They drew a map that we had said was acceptable, but they have decided specifically not to offer that amendment to create -- to change the double-bunk on the floor today so it stands as is.

REPRESENTATIVE CARNEY: Wow. Thank

you.

CHAIRMAN HALL: Further discussion or debate on the bill.

If not, Representative Torbett is recognized for a motion.

REPRESENTATIVE TORBETT: Mr. Chairman, I move that the House Committee on Redistricting report favorably as to Senate Bill 739.

CHAIRMAN HALL: And, Members, the chair does intend to call the roll.

Further discussion or debate.

If not, you've heard the motion from Representative Torbett. Those in favor will vote aye. Those opposed will vote no.

The clerk will call the roll.

THE CLERK: Adams.

REPRESENTATIVE ADAMS: Aye.

THE CLERK: Brockman.

REPRESENTATIVE BROCKMAN: No.

THE CLERK: Carney.

REPRESENTATIVE CARNEY: No.

THE CLERK: Cooper-Suggs.

REPRESENTATIVE COOPER-SUGGS: No.

THE CLERK: Dixon.

REPRESENTATIVE DIXON: Aye.

THE CLERK: Hardister.
REPRESENTATIVE HARDISTER: Aye.
THE CLERK: Harrison.
REPRESENTATIVE HARRISON: No.
THE CLERK: Hastings.
REPRESENTATIVE HASTINGS: Aye.
THE CLERK: Hawkins.
REPRESENTATIVE HAWKINS: No.
THE CLERK: Jones.
REPRESENTATIVE JONES: Aye.
THE CLERK: Mills.
REPRESENTATIVE MILLS: Aye.
THE CLERK: Reives.
REPRESENTATIVE REIVES: No.
THE CLERK: Rogers.
REPRESENTATIVE ROGERS: Yes.
THE CLERK: Szoka.
REPRESENTATIVE SZOKA: Aye.
THE CLERK: Warren.
REPRESENTATIVE WARREN: Aye.
THE CLERK: Zachary.
Richardson.
REPRESENTATIVE RICHARDSON: No.
THE CLERK: Saine.
REPRESENTATIVE SAINE: Aye.

THE CLERK: Torbett.

REPRESENTATIVE TORBETT: Aye.

THE CLERK: Bell.

REPRESENTATIVE BELL: Aye.

THE CLERK: Stevens.

Hall.

CHAIRMAN HALL: Aye.

THE CLERK: 13 yes; 7 no.

CHAIRMAN HALL: 13 having voted in the affirmative and 7 in the negative, the motion carries and the bill receives a favorable report.

SENATOR HISE: Thank you, Mr. Chair.

CHAIRMAN HALL: Members, I am now going to shift to the congressional map, and the chair is going to move over to the dais, along with our friend from the Senate, to present the congressional map, and I am going to turn the chair over to Chairman Saine.

CHAIRMAN SAINE: Thank you, Members of the Committee.

Representative Hall, you are recognized.

CHAIRMAN HALL: Thank you, Mr. Chairman.

Members, I won't say a lot of the same things that I've said already in this committee, but I will just briefly say again that this is an historic process that we've undertaken in both the House committee and the Senate committee. It's the most transparent process in the history of North Carolina in redistricting. It's also unprecedented in the decision to not use political data in the drawing of these maps.

We've had this room open now for over three weeks. Any member who wanted to could come in and draw these maps. Any member of the public who wanted to, anywhere in the world, who had an internet connection, could log in and watch as these maps were drawn live and they could listen to the audio that was being said at the computer terminal that was being drawn on.

Members, I was disappointed to see that no members -- none of the Democratic members put forth any congressional maps as member-proposed maps. I solicited those from the floor and also sent emails out to let members know that prior to public comment, we would be putting the proposed-member maps out on our committee website. I submitted a map , but I didn't

receive any other maps.

So, Members, as for the map itself that's before you today, I will mention that the House and the Senate have now filed the same map. This is not the initial map that I drafted, but for process purposes, we're going to be taking up the Senate version even though I did file the same one.

The map before you and the map that I filed were both drawn in the Senate committee room. I drew a separate map that was posted on the House committee website, but again, I ultimately decided that the map drawn in the Senate committee was a better map because, among other reasons, it splits fewer municipalities than the initial map that I drew. Also, in public comment, we heard from folks that it was important to keep those finger counties together in northeastern North Carolina, and I advocated for that change to be made and the Senate chairs agreed with that and that change was made, and therefore I felt the map drawn in the Senate committee with those changes was the best member-submitted map.

I will -- Mr. Chairman, I will turn

this over now to Senator Daniel to speak to the map if he sees fit.

CHAIRMAN SAINE: Thank you, Representative Hall.

Senator Daniel, you're recognized.

SENATOR DANIEL: Thank you, Mr. Chair and Representative Hall. And I guess if it pleases the chair, I can go through and give a general description of each of the 14 congressional districts just as we've done in the House and the Senate.

So let's start in the east with Congressional District 1. So this is a coastal district that's anchored in eastern North Carolina. It contains 15 whole counties. I won't go through those because you can see them there, and it contains two partial counties which are Onslow and Pitt.

The district takes in the Outer Banks and most of the state's shoreline. Its shape is mostly dictated by the Atlantic Ocean. And in this district there is zero municipalities split by the district boundaries, and VTDs are only split for the purpose of equalizing population to zero deviation.

The district keeps all of the finger counties in northeastern North Carolina together in the same district as well as most of the counties that run along the Virginia border. And that was some of the public comment that we had heard during public hearings, that the finger counties, it was important to them as a community of interest to be kept together.

Congressional District 2 is a district taking in most of rural northeastern North Carolina. It contains 16 whole counties, and there are two split counties, Pitt and Wayne. There is zero municipalities split by this district, and there is one precinct split in Pitt county and one split in Wayne county for the purpose of equalizing population.

Congressional District 3 is a district based in southeastern North Carolina. It improves upon the compactness of the current district by keeping mostly rural counties closer to the coast in the same district as the remaining coastal counties. It contains seven whole counties and one split county that is Onslow. The district contains zero split municipalities, and the only split VTD is

required in order to equalize population. So this district is also a product of public input from some of the comments at the New Hanover public hearing. And I guess that's all for Congressional District 3.

Congressional District 4 is a nearly perfect four-county district south of where we are right now. It includes Cumberland, Harnett, Johnston, and Sampson counties, and a small portion of Wayne county that is necessary to balance population. These counties have similar geography, industry, and proximity to the population base in the region near Fayetteville and Raleigh. The district is extremely compact and contains zero split municipalities. There is one split VTD in Harnett county and one in Wayne county. Both were split to equalize population between the districts.

Moving on to Congressional District 5. It's based entirely in Wake county. It's made up of the following municipalities: Garner, Knightdale, Raleigh, Rolesville, Wake Forest, Wendell, and Zebulon. Raleigh and the other municipalities in Wake county share common interests. Many people live and work and

commute between these different cities and towns in Wake county. There are no split municipalities in this district, and any VTDs that are split are done for the purpose of maintaining municipality boundaries or equalizing population.

Congressional District 6 is made up of Durham county, Orange county and the portion of Wake county that contains Apex, Cary, and Morrisville. This is a district that has existed in one shape or form for decades. As the population has grown in the area, it has been concentrated more specifically in the Triangle. It is home to some of the state's most prominent universities and hospitals. Along with Charlotte, it is the preeminent urban population based in our state. There are no split municipalities in the district, and any split VTDs are located in Wake county and also are done merely for the purpose of equalizing population or to keep municipalities whole.

Congressional District 7 is made up of four whole counties and portions of five counties. That includes all of Alamance, Chatham, Lee, and Randolph, parts of Davidson,

Guilford, Harnett, and Wake. The district runs from the Triangle west through the central Piedmont region. It is made up of the smaller cities and towns as well as the rural areas that make up this area of the state. There is only one split municipality in the district as it contains a very small portion of Greensboro. VTDs are only split for the purpose of equalizing population and keeping cities whole.

Congressional District 8 is made up of eight whole counties and part of one county, Mecklenburg. The district takes in most of the counties considered to be in the Sandhills region. There are no split municipalities in the district, and one VTD is split in Mecklenburg county for the purpose of equalizing population. By adding Anson, Montgomery, and Richmond, we believe this district will be rooted in the Sandhills region and represent that region of our state well.

Congressional District 9 is a Charlotte district. Charlotte's population, as you know, is too large for one congressional district so it must be split, so 97 percent of this district is made up of Charlotte, and 83 percent of the

city is in this congressional district. VTDs are split only to equalize population and ensure that there are no other municipalities in the district.

Congressional District 10 is made up of three whole counties, Cabarrus, Davie, and Rowan, as well as parts of Iredell, Davidson, and Guilford. This district takes in the counties in suburban and exurban areas that stretch between the two population centers of the Charlotte and the Triad. There is only one split municipality, as mentioned before, which is Greensboro. The district does contain all of High Point, and VTDs are split only for the purpose of equalizing population.

Congressional District 9 -- 11, I mean, is based in the northwestern corner of North Carolina, is made up of eight whole counties. The district also contains a portion of Guilford county and one precinct in Watauga where the current incumbent lives. There's one split municipality, again, that's Greensboro, but more than 90 percent of Greensboro residents are kept together here in this congressional district. And that was one of the things that

we tried to do in order to honor the spirit of the criteria which was to consider municipalities and to try to keep them whole. As a community of interest, we would try to keep as many -- much of the population of a town together as possible -- or a city together as possible.

Congressional District 12 is made up of four whole counties and one partial county. It contains all of Catawba, Forsyth, Lincoln, and Yadkin, and a portion of Iredell. It is a compact district that connects the suburbs outside Charlotte to the area in and around Winston-Salem. It contains no municipality splits, and it splits VTDs in Iredell only for the purpose of equalizing population.

Congressional District 13 is made up of seven whole counties and the portion of Mecklenburg county that contains the municipalities and towns to the west and north of Charlotte. The only municipality split by this district is Charlotte because it has to be split, and VTDs are split only to equalize population.

Finally, Congressional District 14 is a

western North Carolina district that takes in most of the mountain counties in the westernmost tip of North Carolina. It contains 14 whole counties, which I won't read, but you can see there on the map. It splits one VTD in Watauga county to avoid double-bunking two incumbents. There are no municipalities split by the district. And this district was based in part on public comment that we heard during the comments that suggested that the western district should go more north towards Watauga county rather than taking in some of the southern North Carolina -- southwestern North Carolina counties.

So to summarize, going through the committee criteria that was passed by the joint House-Senate Redistricting Committee, all of these districts are drawn to zero deviation or to one person less than ideal. There is no point contiguity used in this map. It divides only 11 counties. It divides 24 VTDs out of over 2600, which is less than 1 percent, so over 99 percent of VTDs are kept together. And it divides only two municipalities in the entire state, one of which had to be divided just based

on numbers.

Racial data was not used in the drawing of this map and neither was partisan data used drawing this map. Member residence was considered when possible and communities considerations were made to try to keep communities of interest together particularly in terms of towns and cities.

So, Mr. Chair, that's the description of the map. Sorry if it was too lengthy, but it was shorter than the 50 Senate district description we heard from Senator Hise in our own committee.

CHAIRMAN SAINE: Your brevity is greatly appreciated, sir.

I see that Representative Harrison has a question, you are recognized, and then Representative Richardson after that.

REPRESENTATIVE HARRISON: It may be a comment. Is a comment appropriate at this time? I mean, I --

CHAIRMAN SAINE: You may make a comment.

REPRESENTATIVE HARRISON: Okay. I appreciate that.

I start going into questions about why Greensboro is split the way it is, but I think you probably answered it the way you're going to answer it so I don't want to waste anybody's time, but I did want to note -- well, a couple things.

I appreciate -- I appreciate that the chairs have all tried to make this a very public, transparent process, and at the risk -- it's not a hearing in Guilford, it was in Forsyth or Alamance and some participated online. As I said yesterday, I haven't read all 4,000 comments, but there was a very strong commentary on the -- and recommendation to keep Guilford whole and to keep the Triad whole. Greensboro, High Point, Winston-Salem are the Piedmont Triad, and this map splits it up very, very significantly and in ways that are splitting up the large African American populations and communities of interest. And I -- it confounds me how -- how y'all came up with this map for Guilford county because it's -- it's just taking downtown Greensboro all the way to the Tennessee border just doesn't seem to make a lot of sense so me. And you have

Representative Fox's precinct carved out, and that's sort of not very compact, and members don't have to live in their district at the congressional level anyway, so I'm not sure why you did that.

But I did want to -- I do want to note that this is a problem. It's a problem with all the three major urban counties. And I'll let the others speak to their respective counties, but the folks in Greensboro are pretty upset about it.

So I wrote -- I wrote my notes, so I took notes on everybody who spoke at the post map drawing, and the maps were described as ludicrous, racially unfair, grossly partisan gerrymandered, disconnected, scary, undemocratic, dishonest, confusing and more. And I think that there was sure a better way to do this.

Right now Congressional District 6 is entirely Guilford county and half of Forsyth county, and that's worked out very well. And the folks who spoke at the public hearing talked about how the current Congresswoman Manning has done a great job representing the interest of

the Piedmont Triad.

And I think that it was a problem for us not to consider, as I said, on the Senate maps and the House maps the Voting Rights Act implications for this because I think you have a serious violation here with the African American populations in Greensboro that are all divided up. I just don't understand it. I think it's a terrible congressional map. The partisan analysis shows this as a possible 11-3 in a 50/50 state, and that's just flat wrong. And that's all I'm going to say. Thank you.

CHAIRMAN SAINE: Thank you, Representative Harrison.

Representative Richardson, I didn't mean to bypass you, sir. I did have you as first, but we'll go to you now.

REPRESENTATIVE RICHARDSON: I think Representative Harrison said it all.

As you look at the map, it seems pretty contiguous, but there's some glaring spots where it's not, and I think they're easy fixes, and I'd like to offer a couple. For example, with Wayne in District 4. Wayne has very little in common with Cumberland, Harnett, Johnston. That

could be -- that could fill in all of Onslow and you could -- you could easily move -- we could take Lee and put that in the 4 and then that way that you would -- you would not have these counties split like that.

And another example of that is over in the west where you split one -- you know, Iredell. There's a way to fix those splits. And I think if you did that it would vastly improve these maps to the point I could almost vote for them, but you've got -- there's some glaring -- there's some -- the overall map is -- really follows the guidelines and does a good job. It's just those glaring exceptions that are -- that are there that cause a problem. And if possible, I'd like to sit down with the chairs and offer a fix on that.

But that's what I've noticed is the overall map's outstanding. It's the glitches that really devalue the map in terms of its voting value. Thank you.

CHAIRMAN SAINE: Thank you, sir.

Any other members seeking recognition.

Representative Cooper-Suggs and then Representative Reives.

REPRESENTATIVE COOPER-SUGGS: Thank you, Mr. Chair, and thank you, Senator.

As I look at the maps, I'm looking at eastern North Carolina, and we know that for those of us who live down east that Pitt county is basically the heart of the east, but when I look at this map and I look at District 2, Pitt county was excluded from it. And I'm saying part of this because I know that from Wilson's area, we travel to Pitt, to the hospitals, to shopping and other kind of things that we do.

So my question is why was Pitt county excluded from District 2 but yet and still you added Caswell and Person? So why was Person and Caswell added to District 2 when, once again, we look at interests and how a person could best represent persons who have very similar interests. So why was Pitt excluded and then but yet instead you added Caswell and Person?

CHAIRMAN SAINE: Senator Daniel.

SENATOR DANIEL: Thank you, Mr. Chair, and thank you for the question.

I don't know that there's an easy way to answer that other than, you know, we started drawing the map from the east and the west and

worked towards the middle. Obviously, you know, in both of those areas of the state, the west and the east, you have low-population counties and it takes a lot of counties to make up an entire congressional district. And, you know, when you try to put all the criteria together, splitting as few counties as you have to, trying to make it as compact -- the district as compact as you can, we just felt like this was the best configuration of that area of the state.

REPRESENTATIVE COOPER-SUGGS: May I do a follow-up.

CHAIRMAN SAINE: You're recognized for a follow-up.

REPRESENTATIVE COOPER-SUGGS: Okay. My next question deals with do you intend to run any analytical checks on these maps, now that you created them, to make sure that all voters are treated fairly?

SENATOR DANIEL: These maps were drawn without partisan data or racial data, and I don't believe the Senate has any intention to run those, you know, partisan checks now. And I don't know about the House.

REPRESENTATIVE COOPER-SUGGS: Thank

you, Mr. Chair.

CHAIRMAN HALL: Mr. Chair, if I may speak to that as well.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Our criteria, as the lady knows, is we're not going to use any election data and we're not going to use any racial data at all in analyzing these maps, drawing them or analyzing them. Of course, there are compactness scores that we voted on and so they can be analyzed in that sense pursuant to our criteria, but we're not going to use any racial data or any election data in analyzing nor drawing these maps.

REPRESENTATIVE COOPER-SUGGS: A comment.

CHAIRMAN SAINE: You're recognized.

REPRESENTATIVE COOPER-SUGGS: Okay. Thank you so much.

We've heard before about the Princeton Gerrymandering Project. And I'm a former classroom teacher, national board certified, so whenever I see an F in grading anything, I know that something was not right. When we look at the criteria, even though we said that we

followed all the criteria, that's truly a concern to me, it truly is.

So therefore I just want to say that, you know, it's disheartening for us not to truly go back and look at this and get it right because I think the state of North Carolina is better than an F, and that's just one of the agencies that have graded us. Thank you.

CHAIRMAN SAINE: Thank you.

I've got Representative Reives, and then after Representative Reives, Representative Hawkins. Representative Reives.

REPRESENTATIVE REIVES: Thank you, Mr. Chair.

I want to go back to District 11. And, Senator Daniel, I appreciate you being here, and I appreciate the work you guys put in. What I was trying to figure out with residence being taken into consideration, like, what I'm looking at just on its face, Congresswoman Manning is barely in the district on one side and then, as Representative Harrison was discussing, Congresswoman Fox, you know, had to be -- I don't know what term is best to use that isn't charged, but there had to be some movement to

get her into that district.

And so my question is why was that done? Because, I mean, that took some effort. So what was the thought process behind doing that?

SENATOR DANIEL: Thank you for the question.

CHAIRMAN SAINE: Senator Daniel is recognized.

SENATOR DANIEL: So I think this is the district that contains 90 percent of Greensboro, and so in trying to keep Greensboro whole, that's just, you know, the way the district was drawn. And so I don't know that there's a better answer than that. There -- I think there may be another district where there's some pairings of members. Like Congressional District 9, it was just difficult to eliminate that everywhere, accommodate all the congressional members.

CHAIRMAN SAINE: Representative Reives.

REPRESENTATIVE REIVES: Right. And I understand that. Like, for instance, 9 is the first thing you look at clearly because Congressperson Adams and Congressman Bishop live

right beside each other almost, but, you know, here, for instance, if we're keeping Greensboro whole, it seems you just take the 10 percent of Greensboro that's not in this district and include that and don't include that finger that goes into Watauga, and that makes it pretty easy, like, you know, and then that actually makes it a cleaner district.

So what was the decision as to not taking that 10 percent of Greensboro and bringing that in but instead going into Watauga, and instead of keeping Watauga whole, taking that little finger out of Watauga? Because, I mean -- and I guess to take it to its next logical conclusion, Congresswoman Fox was going to get double-bunked either way, but I think Congresswoman Manning could have easily not been double-bunked so that's why I'm asking that.

CHAIRMAN SAINE: Senator Daniel.

SENATOR DANIEL: I guess, you know, on the one hand I think just to say it was -- you know, it was a choice of the Senate chairs who drew the map to do it that way. And in terms of the population you were mentioning, there are very few people that live in that section of

Watauga so it wouldn't be apples to apples in terms of, you know, you wouldn't be able to get much more of Greensboro -- you know, I don't think you could probably -- you may not even be able to get 1 percent of Greensboro to swap for that, so...

CHAIRMAN SAINE: Representative Reives.

REPRESENTATIVE REIVES: Thank you.

And my next question is I know that there are different interpretations as to how the Voting Rights Act applies to redistricting and how we take that into consideration.

My question is how do you feel the Voting Rights Act applies in terms of trying to make sure that we're complying with it in drawing congressional maps?

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Mr. Chairman, if I can take that one.

Representative Reives, as you know, and we've talked about this previously in committee, the courts have said that there is not sufficient evidence of legally significant racially polarized voting in North Carolina, and therefore we believe that the legally safest way

to draw these maps is not using race at all.

CHAIRMAN SAINE: Representative Reives.

REPRESENTATIVE REIVES: Okay. But then -- so going on the assumption that applies on the congressional maps the same as it does on our Senate and House maps, if I'm understanding -- and I really am trying to make sure I'm not restating anything incorrectly. So the position you've taken when drawing this map, or any of these maps, is saying that you would have to have evidence of racially polarized voting to then affirmatively go in and try to make sure we're complying with the VRA; is that correct?

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: That's generally my understanding of the law, but again, as we know in the past few cases we've seen or the Covington case, they found that there was not sufficient evidence of that. Then we went in 2019, of course, and drew maps not using race at all, those maps were upheld, and so we're trying to stick with what the courts have told us works which is in this case drawing these maps without using race at all.

REPRESENTATIVE REIVES: All right. Thank you.

CHAIRMAN SAINE: Representative Hawkins.

REPRESENTATIVE HAWKINS: Thank you, Mr. Chairman.

And Representative Reives and Cooper-Suggs mentioned a lot of things that I also had in mind, but I want to speak to two things. First, you know, are the communities of interest, and I'll start with District 6, if that's okay, Senator.

You mentioned that there were very few sort of breaks in municipalities. Is that true?

And the question for District 6 is did you -- were you able to keep Morrisville, Cary and those areas together in whole? And -- well, I'll ask that question first, then I'll ask my follow-up, Mr. Chairman.

CHAIRMAN SAINE: Senator Daniel.

SENATOR DANIEL: Thank you, Mr. Chair, and thank you for the question, Representative Hawkins.

My understanding is there's only two municipalities split in this entire map, which

is Greensboro and Charlotte. If you want staff to verify, I'm sure they can do that. That should be in the stat pack. So all the towns you mentioned, they should be kept whole.

REPRESENTATIVE HAWKINS: Follow-up, Mr. Chair.

CHAIRMAN SAINE: You're recognized for a follow-up.

REPRESENTATIVE HAWKINS: Thank you, Mr. Chairman.

And so also, when we're looking at Wake county -- and I know you did go over this in your overview, but do you think there was another way that we could have drawn this district without breaking up, you know, arguably the largest county in the state in three ways? Did you see any other alternatives? I know you probably went through many, many versions of this so I'm not doubting that, but I just wanted to think if you all thought that this was the best way and the best potential configuration because it does sort of break those -- that county into three. And I don't necessarily know because I'm like you, I don't use partisan or racial data to analyze these and will not know

until much later, right, until actual maps are -- until people run on these maps.

But I do wonder, you know, why that was the choice and if you had any other strong alternatives that could have potentially kept Wake county broken into two at least because, you're right, it will hold one congressional district on its own and have to be broken, but this breaking it into three just seems like it does sort of break areas that work all together.

And I give context to that because Research Triangle Park sits on the eastern portion of Durham and some of those people in Cary and Morrisville do participate in the economy that Durham creates, but it just seems a little unnatural is the word I want to use for that southern portion to be connected to Chatham, Lee and others.

CHAIRMAN SAINE: Senator Daniel.

SENATOR DANIEL: Thank you, Mr. Chair.

So, Representative Hawkins, if you followed the discussions in the Senate Redistricting Committee, you know, there were some other alternatives that were offered by, you know, members of our opposite party that,

you know, took a different approach than we took. And so in harmonizing all of the criteria, we tried to maximize -- or minimize the number of counties split. So in this map it keeps 89 of 100 counties whole, without being split, and it also only splits two municipalities. So we just -- I guess we chose to place weight on those criteria in drawing the map, and that's just what we did, but, you know, there were other choices that could have been made and there were other options that were offered.

REPRESENTATIVE HAWKINS: Follow-up, Mr. Speaker. So that actually -- may I be recognized.

CHAIRMAN SAINE: You are recognized, Representative Hawkins.

REPRESENTATIVE HAWKINS: That was actually an incredible lead into my next question is when you were giving weight to criteria -- and we've asked this question of Representative Hall as well and ours and so we're familiar with his answers, but this one for you, Senator, is as you went district by district, did you prioritize those that you just

mentioned, or did you sort of standardize the way that you put weight on the criteria?

And that's a really interesting question for us to sort of understand how you sort of went through the list and decided across the state or just district by district.

CHAIRMAN SAINE: Senator Daniel.

SENATOR DANIEL: I don't know, Representative, if there's an easy way to answer that because as you go district by district, you just try to harmonize the criteria. I think we tried to harmonize it in each district. It makes it difficult in congressional-district mapping because you have to have zero deviation between the districts which makes the choices difficult.

And I know like Representative Richardson was talking about, you can move this here and move this here. Well, you know, every time you shift something, then you really can't just change one district, you have to -- you kind of have to draw a whole map.

But I would say that we did -- you know, we were -- you know, I cited the statistics of VTDs, county splits, and municipal

splits because those were three things that we thought were very important.

REPRESENTATIVE HAWKINS: Okay. Good.

Last question, Mr. --

CHAIRMAN SAINE: You are recognized, Representative Hawkins.

REPRESENTATIVE HAWKINS: Thank you, Mr. Speaker.

And I do want to go back to the 11th. You know, again -- and I'm always a fan of sort of, you know, if it's hard to figure out, sometimes we just need additional time to let, you know, sort of cooler heads prevail. And, you know, after, of course, we've had the opportunity to look at these maps and everyone actually has something -- you know, they've had their feedback and had, you know, opportunities to lay their eyes on this, it does seem in the 11th, as Representative Reives mentioned, there is just another potential alternative.

Now, I know that Representative Hall is okay with that because, you know, he's an App State grad and being connected to App State is probably preferable for him, but when it comes to sort of the eye test, having that

finger jut out when we could have included a little more of Guilford county -- this is District 11 -- you know, just seems to, you know, ensure that, again, communities of interest are put together, you know, compactness is sort of ensured and again, just for the voter, you know, sort of catches the eye test.

And not to mention in the double-bunking, you know, also I have to sort of mention that, you know, sort of using your words, not mine, that a choice had to be made about who was double-bunked and where. And it seems that -- you know, I'm a college football fan, and App State is a great college football town, but it just doesn't have much interest -- in interest with the remainder of the district.

And so I'm always concerned about that as we try to explain these things to voters because though we don't live in those areas, of course, all of our constituents ask us how these things come to be, and so I want to make sure that -- I'm giving that as a statement but also giving you an opportunity to sort of think through how we can explain that in particular

because if we -- if we can't, that means -- I'll go back to my famous statement, that I was a May baby and so nothing wrong with a May primary and us really pushing this back and doing the best that we can to best serve the people of North Carolina.

CHAIRMAN SAINE: Senator Daniel.

SENATOR DANIEL: Thank you, Mr. Chair.

So I guess one point that I should have made but didn't is that when you go into Watauga county, it would have overpopulated the 14th district so you had to cut out some of Watauga county in order to make a -- you know, a zero deviation district.

Appalachian State -- all the universities are kept whole, and my understanding is that all of Appalachian State is still in the 14th district, unless staff corrects me on that. I don't think it's in the 11th district.

CHAIRMAN SAINE: Any others wishing recognition.

Representative Hawkins.

REPRESENTATIVE HAWKINS: I didn't know if the staff was going to verify that.

CHAIRMAN SAINE: Standby.

Staff is indicating they would have to pull that up to verify that. They can get that answer for you probably after the committee hearing.

SENATOR DANIEL: Our staff says that I have that reversed and that Appalachian State is kept whole but it is in the 11th district. Okay. So you're right. You're right.

REPRESENTATIVE HAWKINS: Yeah. Thank you, Mr. Chairman.

CHAIRMAN SAINE: Thank you.

Any other members wishing recognition.

Representative Carney.

REPRESENTATIVE CARNEY: Well, we can't let all the Democrats speak and leave me by myself. So I do just have a quick question of Senator Daniel. You want to correct me. That's okay. Just a quick question.

You said that you only split, out of all the -- correct me if I'm wrong. Out of all the municipalities in the state, you only split two. One was Charlotte. What was the other one?

SENATOR DANIEL: The other one is

Greensboro, and Greensboro is kept 90 percent whole in one district.

REPRESENTATIVE CARNEY: Okay. And I probably should know this, but in the last -- currently now in Charlotte in the congressional seat that's in there, is the city of Charlotte split?

CHAIRMAN SAINE: Senator Daniel.

SENATOR DANIEL: I don't have the current congressional map with me so I can't answer that question.

REPRESENTATIVE CARNEY: Okay. And so -- and maybe staff might know, but I can find that out later.

SENATOR DANIEL: And staff, Mr. Chair, might be able to answer the question.

CHAIRMAN SAINE: Refer to staff. They're looking that up now.

REPRESENTATIVE CARNEY: Okay. And so, Senator Daniel, you were saying -- excuse me. You were saying that they were split because of the need to disperse the population. Is that what you were saying?

CHAIRMAN SAINE: Senator Daniel.

SENATOR DANIEL: Mr. Chair.

Yes, ma'am. So the only city that was required to be split was Charlotte because it was too large for one district, so we kept as much as we could in one district for that -- for that municipality.

REPRESENTATIVE CARNEY: Okay. I appreciate that.

CHAIRMAN SAINE: Thank you. And I have online, on Webex, Representative Brockman, you're recognized, sir.

REPRESENTATIVE BROCKMAN: Thank you, Mr. Chair. And this is a simple question.

Representative Harrison mentioned that we would be producing maps that would produce a result of 11-3, and we've heard time and time again from our constituents during this process that we should be producing fair maps.

Fundamentally, I would ask is do you think that these -- are we living up to the expectations of our constituents if we produce maps that are 11-3? Is that fundamentally fair and are we living up to what is being asked of the constituents -- of all of our constituents?

CHAIRMAN SAINE: Thank you, Representative Brockman.

Representative Hall.

CHAIRMAN HALL: You know, what I would respond to that with is this, and I've said this many times, but it again bears repeating.

Never in the history of this state has this body chosen to not use election data. The law would allow this body to hire some outside consultant to use a computer algorithm to go in and try to maximize whatever advantage the body wanted to maximize, but we have voluntarily decided that we will not use election data, and we haven't done that. That wasn't done in the drawing of this map; it wasn't done in the drawing of any of the maps. And that's significant. It is a big deal to decide to hold back from doing that and say we're not going to use election data to draw these maps.

This committee adopted a set of criteria using traditional redistricting principles, and as a result of those principles, this is the map that you have before you. I have no idea what the outcome of this map will be because I'm not looking at election data, but I have looked at our criteria, and this map complies with our criteria.

And so to answer your question, yes, I am happy to present this to my constituents and the people of North Carolina.

CHAIRMAN SAINE: Thank you, Representative Hall.

Are there any other members seeking recognition?

Representative Richardson.

REPRESENTATIVE RICHARDSON: Mr. Chairman, you're a wonderful lawyer, and you can say -- and I know you didn't look at election data per se, but when a map shows a favorable rating in 11 districts and a favorable rating for the other party in 3 districts, it's an awful big coincidence that that wasn't -- that that somehow wasn't intentional. And I don't mean it that way.

What I mean is is that it's impossible for your party or my party to draw fair maps, and that's why we need to go to an impartial redistricting commission. I don't impute any ill will in what you did whatsoever. You're the majority party. I really don't, and I know -- and I don't think you intentionally did it by numbers, but you're an astute, intelligent

man, and you can look at areas of populations and know where the voter turnout is going to be and what the voter turnout is going to be like. And it's virtually impossible for either party, it is, to produce a map that would be totally fair to everybody.

So I don't want to call you on it, but I feel like that we've got to be honest about this to a degree, and these maps do favor your party, and they should, you won, but we should go to an impartial redistricting commission for that very reason. Thank you.

CHAIRMAN SAINE: Any other comments, any other questions before the committee?

Seeing none, Representative Torbett, you are recognized for a motion.

REPRESENTATIVE TORBETT: Thank you, Mr. Chairman. I move that the House Committee on Redistricting report out as favorable to Senate Bill 740.

CHAIRMAN SAINE: The committee has heard the motion. As per the request, we are going to go to a roll call vote, and the clerk will call the roll.

THE CLERK: Adams.

REPRESENTATIVE ADAMS: Aye.
THE CLERK: Brockman.
REPRESENTATIVE BROCKMAN: No.
THE CLERK: Carney.
REPRESENTATIVE CARNEY: No.
THE CLERK: Cooper-Suggs.
REPRESENTATIVE COOPER-SUGGS: No.
THE CLERK: Dixon.
REPRESENTATIVE DIXON: Aye.
THE CLERK: Hardister.
REPRESENTATIVE HARDISTER: Aye.
THE CLERK: Harrison.
REPRESENTATIVE HARRISON: No.
THE CLERK: Hastings.
REPRESENTATIVE HASTINGS: Aye.
THE CLERK: Hawkins.
REPRESENTATIVE HAWKINS: No.
THE CLERK: Jones.
REPRESENTATIVE JONES: Aye.
THE CLERK: Mills.
REPRESENTATIVE MILLS: Aye.
THE CLERK: Reives.
REPRESENTATIVE REIVES: No.
THE CLERK: Rogers.
REPRESENTATIVE ROGERS: Aye.

THE CLERK: Szoka.

REPRESENTATIVE SZOKA: Aye.

THE CLERK: Warren.

REPRESENTATIVE WARREN: Aye.

THE CLERK: Zachary.

Richardson.

REPRESENTATIVE RICHARDSON: No.

THE CLERK: Saine.

CHAIRMAN SAINE: Aye.

THE CLERK: Torbett.

REPRESENTATIVE TORBETT: Aye.

THE CLERK: Bell.

REPRESENTATIVE BELL: Aye.

THE CLERK: Stevens.

Hall.

CHAIRMAN HALL: Aye.

THE CLERK: 13 yes; 7 no.

CHAIRMAN SAINE: And the motion does carry.

With no other business being before the committee, we stand adjourned.

NCLCV v. Hall
21 CVS 15426
LDTX076

(Transcription from YouTube started at 9:36:14.)

CHAIRMAN HALL: ... today and were being printed downstairs. And, of course, we need a copy for every member to be able to look at, and that takes time to print these color copies, so that's what we've been waiting on this evening.

Members, we'll go ahead and jump right into it. I am going to move that the PCS for HBK-12 be before the committee. And without objection, that PCS will be before the committee.

I do have a proposed amendment to that, but I am going to yield the chair to Chairman Saine for him to chair, and I'm going to present from the podium. Chairman Saine.

CHAIRMAN SAINE: Thank you, Mr. Chairman. Thank you, members of the committee.

We're going to start with Amendment 2; is that correct? Okay.

And the gentleman is recognized.

CHAIRMAN HALL: Thank you, Mr. Chairman.

Members, this is H -- it's entitled HBK Amendment Number 2. There's two pages to this amendment, and I'll briefly go through, sort of from west to east, the reasons behind the changes in this map.

Beginning with Cabarrus county, the chair was informed that Representative Pittman does not plan to run again, and so we didn't have the concern of not double-bunking. Representative Pittman said -- so I went in and tried to make it a bit more compact, so that's the reason for that change.

Moving east into the Durham and -- excuse me -- the Chatham-Randolph grouping, I did -- we heard a lot of public comment about population deviations between Chatham and the Randolph district, and so I went in and tried to fix some of that, to make those districts a little bit more even in terms of population deviation.

Moving on to the east in the Sampson-Bladen-Wayne-Duplin-Pender-Onslow groupings, we -- I felt that Bladen and Pender made more sense being together in terms of counties that have similar interest, and if we

draw it this way, we're able to draw more compact districts.

So, Mr. Chair, I would move that this amendment be adopted.

CHAIRMAN SAINE: Any further presentation and the motion -- any questions for the maker of the motion?

Representative Szoka.

REPRESENTATIVE SZOKA: Thank you, Mr. Chair.

Just for clarity sake, I believe you said Bladen and Pender would be together. Mr. Chairman, I think you meant to say Bladen and Sampson because that's what the map shows, just for clarity.

CHAIRMAN HALL: That's right, Representative Szoka. You're correct. My apologies.

REPRESENTATIVE SZOKA: Thank you.

CHAIRMAN SAINE: Any other questions?

Representative Harrison.

REPRESENTATIVE HARRISON: Thank you, Mr. Chair. Chair Hall, I'm just -- it's hard to read this on the fly, but I'm wondering, are you splitting precincts, VTDs in Durham? And if so,

why?

CHAIRMAN HALL: Representative Harrison, VTDs have been split, and that's because the populations are so large in that part of the state that they need to be split.

REPRESENTATIVE HARRISON: Can I have a follow-up.

CHAIRMAN SAINE: You're recognized for a follow-up.

REPRESENTATIVE HARRISON: And again, apologies for last minute here.

So with the -- with the Wayne grouping, what VRA issues did you take into consideration?

CHAIRMAN SAINE: The gentleman's recognized.

CHAIRMAN HALL: As the lady knows, and I've said previously in this committee, courts have found that there is no legally significant racially polarized voting in North Carolina. The committee decided not to use race as a factor in drawing these maps, and therefore the maps comply with the VRA.

REPRESENTATIVE HARRISON: Follow-up, if I may.

CHAIRMAN SAINE: You're recognized for

follow-up.

REPRESENTATIVE HARRISON: I appreciate that. We may have a difference of opinion about that, but I'll wait for that discussion.

Another thing -- and I apologize. Are you splitting any municipalities in this -- in the Wayne county proposal?

CHAIRMAN HALL: No.

REPRESENTATIVE HARRISON: And if I may have one more follow-up.

CHAIRMAN SAINE: Yeah, one more.

REPRESENTATIVE HARRISON: Are you splitting any VTDs in Wayne?

CHAIRMAN HALL: There is one VTD that's split in the district.

CHAIRMAN SAINE: Seeing no other questions, you've heard the motion. All those in favor signify with saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN SAINE: Those opposed, like sign.

COMMITTEE MEMBERS: No.

CHAIRMAN SAINE: In the opinion of the chair, the ayes have it, the ayes do have it, and the amendment is adopted.

Recognize the gentleman from Caldwell county.

CHAIRMAN HALL: Thank you, Mr. Chairman.

And, Members, now that the PCS as amended is before the committee, I do want to make some brief opening remarks because I think that the process, as I've previously said chairing this committee and in presenting, this is a historic process in this body that has never happened in the history of this state and in the history of this General Assembly.

We've embarked on the most transparent redistricting process in North Carolina history, and there is simply no debate that can be had about that. Every part of this map-making process was done in public, and it was recorded, it was archived for anyone who would like to see it. Not only was it the most transparent process, but for the first time in North Carolina history, the legislature adopted a process on our own, on our own volition, that did not include the use of political data.

Further, we received an immense amount of public input on the maps which has resulted

in a North Carolina House map that reflects weeks of public comment both in person and online. Additionally, this room has been open since October 6th, Monday through Friday, from 9:00 a.m. to 5:00 p.m., wherein any member could come in and draw whatever maps that they saw fit. There was not a problem with resources in terms of the computer. I was in here quite a bit over the course of that roughly three and a half weeks, and I don't think at any point that I see all four stations being filled at one time, so every member had every opportunity to come in and draw whatever map that they saw fit.

Members, as you all know, the rural areas in North Carolina have lost an immense amount of population in the past decade which has resulted in wholesale change of some districts and areas. A couple of examples of that is Representative Willingham's district, where he kept all of his current district in Edgecombe and Martin, but he had to add the entirety of Bertie to make the minimum population. Same goes for Representative Wray who had to add another whole county, Warren county, to his current district of Halifax and

Northampton.

In addition, many of the groupings did not change over the course of the decade, or they remained similar to the previous decade, and given that there was so much litigation over the course of the last decade with respect to maps, the chair took advantage of many court cases that had previously dictated to the General Assembly on how to draw -- how to draw legislative maps and congressional maps. This is not applicable in all cases, however, but where applicable, the chair made every effort to keep the current districts intact and will encourage negative votes on any amendment that does not attempt to achieve that same goal.

I want to begin the presentation of the chair's proposed map by going through the criteria that this committee adopted and how the proposed map coincides with that criteria.

First, we decided to keep counties whole. Within the map -- of course, we all know that's a constitutional revision to the Stephenson decision. And within this map, where counties could be kept whole, they are kept whole. We kept every county whole that we

could. For example, Chatham, Lee county, Polk county are some counties where we had choices to make about keeping counties whole, and we kept those counties whole.

We attempted not to split VTDs. In 2011, there were hundreds of hundreds of VTD splits in the 2011 maps that were drawn. In the chair's proposed map that's before you today, there are only six VTD splits across the entire state of North Carolina, only six in this entire map.

We honored municipal boundaries. The chair made every effort to keep municipalities whole throughout the draw. The report in front of you will say that there are 82 municipality splits across the state, but the bulk of the split municipalities that you see in the report either have no population or extraordinarily small populations in the parts that are split.

Contiguity. Every district in this map is contiguous.

Incumbency considerations. In this map, we chose the bare minimum of number of -- of number of members who are double-bunked.

We looked at compactness. Despite not being drawn by a computer algorithm, this map contains the compactness of the current map that had the advantage of being drawn with a computer algorithm.

We did not consider race. As chair, I did not look at racial data in drawing these maps.

We did not consider political data. I did not look at political data in drawing these maps.

Again, given that I did not have a computer-based algorithm or consultant using an algorithm, the final product has resulted in an impressive map that splits very few precincts, keeps municipalities whole, and creates compact districts.

And with that, Mr. Chairman, I will yield back to you.

CHAIRMAN SAINE: The chair thanks the gentleman from Caldwell.

It's the chair's understanding that there are some amendments that will come before the committee today.

And is there a particular order,

Mr. Chairman.

CHAIRMAN HALL: Probably just the order that are numbered, whatever you have in front of you. There's no particular --

CHAIRMAN SAINE: So the chair will take up Amendment 1, looks like Mecklenburg county. Who will be presenting that?

Representative Reives.

I'm sorry.

UNIDENTIFIED SPEAKER: [Unintelligible].

CHAIRMAN SAINE: Okay. So this actually will be Amendment Number 2, but on your sheet it's labeled 1. So Amendment 2.

Representative Reives, you are recognized.

REPRESENTATIVE REIVES: Thank you, Mr. Chair.

And one thing I would ask -- I'd be asking for the ayes and nos on each of these, and so if we could see about doing that now, then --

CHAIRMAN SAINE: If the gentleman wants to have that, then the chair will gladly entertain that.

REPRESENTATIVE REIVES: Thank you very much.

CHAIRMAN SAINE: Sure. And you are recognized.

REPRESENTATIVE REIVES: Thank you.

And what I would say is this: that looking at the map that we already have that's been presented by Chairman Hall, you -- and I'm trying to read my own writing. There's a split --

CHAIRMAN HALL: It says that one looks good.

REPRESENTATIVE REIVES: That is what my note says. It's amazing. You already saw it.

It says that VTD Number 134 was split in District 89, and you also have a lack of compactness in districts across that county.

The amendment that I presented -- excuse me -- would split Charlotte definitely, splits Huntersville, and splits Stallings which crosses county lines, but it does not split any of the VTDs. And the average Reock score across all 13 districts is 49, compared to 44 with the chairman's map, and also the Polsby-Popper difference is 45 to 33. And so I would say with

the compactness and with the fact it doesn't split VTDs that I feel like it complies with the committee's criteria more and therefore we would ask that you accept the amendment.

CHAIRMAN SAINE: I read the gentleman's proposal. Anyone wishing to comment?

Representative Carney.

REPRESENTATIVE CARNEY: Thank you, Mr. Chairman, and thank you to Leader Reives for this amendment.

As he had pointed out, it doesn't split VTDs, but you did -- this amendment has no split VTDs, but the Hall map does have. It splits 134. And can you tell me why you had to split that VTD.

CHAIRMAN SAINE: Representative Hall, you are recognized.

CHAIRMAN HALL: Representative Carney, I -- let me -- let me get a more precinct-level detailed map so I can see exactly which one it is you're talking about.

REPRESENTATIVE CARNEY: Okay.

CHAIRMAN SAINE: And as they're looking for that, the chair is just going to -- as you're going through your paperwork, the next

one that we'll take up after this one will be Amendment 3 as it's labeled.

UNIDENTIFIED SPEAKER: Mr. Chair.

CHAIRMAN SAINE: HBVA Amend 3, if you just want to get that in your queue.

REPRESENTATIVE CARNEY: That -- Mr. Chairman, that -- Chairman Hall, that precinct is in District 89, I think, if that helps.

CHAIRMAN HALL: Mr. Chairman.

CHAIRMAN SAINE: You are recognized, Representative Hall.

CHAIRMAN HALL: I don't have that particular VTD map in front of me, Representative Carney. The reason that that split was made was to try to keep the municipality whole in northern Mecklenburg. I believe that's Huntersville that we were trying to keep whole, and that's why that was split.

REPRESENTATIVE CARNEY: Okay. And in District 90, there was another split VTD, and that particular one has the worst compactness score in the state. And so why -- I'm just questioning why did you draw it that way compared with the more compact version that we

have shown with the amendment offered by Representative Reives?

CHAIRMAN SAINE: Mr. Chairman, if we could perhaps displace that amendment and move on so I can get a copy of the Mecklenburg map with those precincts that are on there, we'll come back to that.

REPRESENTATIVE CARNEY: Sure. I appreciate that.

CHAIRMAN SAINE: Yeah, we can displace that. We'll hold on to that one.

We'll move to what the chair had described as HBVA -- or HBV Amend 3 which looks like you'll see Randolph, Moore, Richmond.

Representative Harrison.

REPRESENTATIVE HARRISON: That's my amendment.

CHAIRMAN SAINE: Okay. You're recognized.

REPRESENTATIVE HARRISON: Thank you. Thank you, Mr. Chair.

So I'm not sure exactly how this compares to the changes that were made in Chair Hall's amendment, but there are -- there's a population deviation problem with Chatham and

the adjacent districts.

We heard a lot of comments, the public comments written and those who were present, that talked about the addition of -- I think it was the Providence precincts, specifically adding it to the Chatham county, which is rapidly growing, whereas the adjacent county Randolph is not and it's actually underpopulated. So this amendment simply takes that Providence voter tabulation district and keeps it in with House District 60, which is Representative McNeill's district.

And I believe that -- I believe that's all I have to say about that. I think it -- I think it handles the population issues better because you have -- Chatham county right now is nearly at 5 points, and it's growing rapidly, whereas the others are 3 to 5 points under the recommended deviation as required by Stephenson. So I would recommend this amendment for your approval.

CHAIRMAN SAINE: Thank you, Representative Harrison.

Any questions for the maker of the amendment?

CHAIRMAN HALL: Mr. Chairman.

CHAIRMAN SAINE: Representative Hall, you're recognized.

CHAIRMAN HALL: Members of the committee, the chair -- well, I listened to the public comment as well, and we did hear a lot of public comment about the deviation changes between the Chatham and Randolph districts. And so I am going to support this amendment, and I ask that you vote in favor of the amendment.

CHAIRMAN SAINE: Any others wish to speak on the amendment?

Seeing none, all those in favor of the amendment please signify with saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN SAINE: Those opposed.

In the opinion of the chair, the ayes have it. The ayes do have it.

Representative Reives, you are correct. You asked for a roll call vote. I will certainly honor that.

If the clerk will call the roll.

THE CLERK: Adams.

REPRESENTATIVE ADAMS: Aye.

THE CLERK: Brockman.

Carney.
REPRESENTATIVE CARNEY: Aye.
THE CLERK: Cooper-Suggs.
REPRESENTATIVE COOPER-SUGGS: Aye.
THE CLERK: Dixon.
REPRESENTATIVE DIXON: Aye.
THE CLERK: Hardister.
REPRESENTATIVE HARDISTER: Aye.
THE CLERK: Garrison.
REPRESENTATIVE GARRISON: Aye.
THE CLERK: Hastings.
Hawkins.
REPRESENTATIVE HAWKINS: Aye.
THE CLERK: Jones.
REPRESENTATIVE JONES: Aye.
THE CLERK: Mills.
REPRESENTATIVE MILLS: Aye.
THE CLERK: Reives.
REPRESENTATIVE REIVES: Aye.
THE CLERK: Rogers.
REPRESENTATIVE ROGERS: Aye.
THE CLERK: Szoka.
REPRESENTATIVE SZOKA: Aye.
THE CLERK: Warren.
REPRESENTATIVE WARREN: Aye.

THE CLERK: Zachary.

REPRESENTATIVE ZACHARY: Aye.

THE CLERK: Richardson.

[Unintelligible].

THE CLERK: Saine.

CHAIRMAN SAINE: Aye.

THE CLERK: Torbett.

REPRESENTATIVE TORBETT: Aye.

THE CLERK: Bell.

REPRESENTATIVE BELL: Aye.

THE CLERK: Stevens.

Chairman Hall.

CHAIRMAN HALL: Aye.

CHAIRMAN SAINE: Before the clerk proceeds, Representative Richardson, I see you on the -- on Webex, and I also see Representative Hastings. We didn't get audio from you. If you'd like to cast your vote, Representative Richardson.

If you'll give me a thumbs up. It looks like aye; is that correct?

Okay, we've got an aye for Representative Richardson.

Representative Hastings.

REPRESENTATIVE HASTINGS: Aye.

CHAIRMAN SAINE: And, Representative Brockman, did we miss -- he's out of the room.

UNIDENTIFIED SPEAKER: Aye.

CHAIRMAN SAINE: Representative Hastings. There you are. We don't have audio, but if you're an aye, please signify with a thumbs up. And we'll record that as aye.

And Brockman online is giving us a thumbs up. If the committee members will verify that. It sounds like everyone's in agreement.

And the amendment does pass unanimously.

Representative Hall, do you have the data that you needed and we can go back to that?

CHAIRMAN HALL: If you will continue on, Mr. Chairman, and I will let you know when I get that up here.

CHAIRMAN SAINE: We've got -- the chair's just randomly pulling from his stack, just like yours. The chair pulls HST Amend 1. It looks like Alamance county.

Representative Harrison, is that yours?

REPRESENTATIVE HARRISON: If I'm not mistaken, it's Representative Reives.

CHAIRMAN SAINE: Representative Reives,

you're recognized.

REPRESENTATIVE REIVES: Thank you.

And in both the chair's map and my amendment, we split the city of Burlington, but both do not split VTDs or double-bunk any incumbents. My amendment proposes a more compact drawing of the two districts in Alamance, and I would ask that the committee adopt this amendment because of that.

CHAIRMAN SAINE: Okay. You've heard the presentation on the amendment.

CHAIRMAN HALL: Mr. Chairman.

CHAIRMAN SAINE: Anyone wishing to be recognized.

Representative Hall.

CHAIRMAN HALL: Thank you, Mr. Chairman.

Members, Alamance county has been the subject of litigation in the past. And as I said earlier, we tried to take what we learned from those cases and apply them to these maps. And so in this map, I only made three total changes in terms of VTDs in the -- in the whole -- the whole map, in this grouping, and so because of that, I would ask you to oppose this

amendment.

CHAIRMAN SAINE: Any others wishing to speak?

Representative Harrison.

REPRESENTATIVE HARRISON: Thank you, Mr. Chair.

Chair Hall, just a couple of quick questions. Comparing Representative Reives' proposed map -- proposed changes to the -- your proposal, it just looks on the face of it that Representative Reives' amendment is more compact. And I think you said this, but the Polsby-Popper score is .39 versus .31, and you can see that there's that little, odd precinct that pokes out into Representative Riddell's proposed district from Representative Hurtado's.

And it seems like -- it looks like you're putting North Thompson voting tabulation district into 54 and you moved the South Burlington voter tabulation district out of 54, where there were other VTDs such as Faucette, and the northern section of the county that had an identical population or close population to Northern Thompson. So do you mind saying why you chose the ones you did.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Thank you, Representative Harrison, for the question.

As an aside, the chair will say that this committee room has been open for three and a half weeks. I was not given any of these amendments until last night. That -- I don't want to cast aspersions on anyone, but one can infer that that was by design.

And so again, what I will say about this map and the one that was drawn is that Alamance county has been litigated and the current district has been upheld in a court, and so when I went in to draw this, my goal was to make as few changes as possible and as few changes as reasonably required with population changes because, again, it's been litigated and in making as few changes as possible, we stick with something that's similar to the current district and makes it more likely that it will be upheld.

Again, I didn't -- I've got eight amendments I think that are being put forth tonight, didn't get them until last night. Some of the printouts don't even have precinct-level

numbers on them. No members approached me during the map-drawing process. I did speak with Representative Reives quite a bit, and he was always open with me and upfront, and I was the same with him, but it doesn't change the fact that the members of this committee have had three and a half weeks to put forth amendments. We didn't get them until last night.

And so I think that -- you know, because of that, it makes it difficult to sit down and talk about precinct-level data with the members asking questions on amendments that they sent last night. Please oppose the amendment.

CHAIRMAN SAINE: Representative Harrison.

REPRESENTATIVE HARRISON: Just a quick follow-up.

CHAIRMAN SAINE: You are recognized.

REPRESENTATIVE HARRISON: These are not my amendments so I can't speak to the process, but I do know that the staff has been pretty backed up drafting because we're just seeing them for the first time too.

I just -- not a question, but just think there are ways to move precincts and equal

populations that would improve the map's compactness because the Polsby-Popper scores are clearly better in Reives' amendment, so I would urge you to support it. Thank you.

CHAIRMAN HALL: Mr. Chairman.

CHAIRMAN SAINE: You're recognized, sir.

CHAIRMAN HALL: I would like to see if Representative Harrison would yield for a question.

CHAIRMAN SAINE: Representative Harrison, will you yield?

REPRESENTATIVE HARRISON: Yes.

CHAIRMAN HALL: The lady said that these are not your amendments. Can you tell the committee whose amendments these are.

REPRESENTATIVE HARRISON: I believe Representative Reives. It's Representative Reives' amendment. I just offered the Chatham county one. Thank you.

CHAIRMAN HALL: Thank you.

CHAIRMAN SAINE: Thank you.

Any others wishing recognition.

Seeing not, we will go into a roll call vote at the request of Representative Reives.

The clerk will call the roll.

THE CLERK: Adams.

REPRESENTATIVE ADAMS: No.

THE CLERK: Brockman.

Carney.

REPRESENTATIVE CARNEY: Aye.

THE CLERK: Cooper-Suggs.

REPRESENTATIVE COOPER-SUGGS: Aye.

THE CLERK: Dixon.

REPRESENTATIVE DIXON: No.

THE CLERK: Hardister.

REPRESENTATIVE HARDISTER: No.

THE CLERK: Harrison.

REPRESENTATIVE HARRISON: No.

THE CLERK: Hastings.

REPRESENTATIVE HARRISON: I'm sorry. I meant to say aye. I apologize.

THE CLERK: Hastings.

CHAIRMAN SAINE: Representative Hastings and Representative Brockman, the chair and the vice chair have noticed you signified with a thumbs up as aye. If the clerk will record that for Representative Brockman.

Representative Hastings, we have no audio on your -- on your feed. If you could

either signify by cutting your camera on and showing us or using the app there that can give the thumbs up. We'll come back to you before we finish.

Go ahead, clerk.

THE CLERK: Hawkins.

REPRESENTATIVE HAWKINS: Aye.

THE CLERK: Jones.

REPRESENTATIVE JONES: No.

THE CLERK: Mills.

REPRESENTATIVE MILLS: No.

THE CLERK: Reives.

REPRESENTATIVE REIVES: Aye.

THE CLERK: Rogers.

REPRESENTATIVE ROGERS: [Unintelligible].

THE CLERK: Szoka.

REPRESENTATIVE SZOKA: No.

THE CLERK: Warren.

REPRESENTATIVE WARREN: No.

THE CLERK: Zachary.

REPRESENTATIVE ZACHARY: No.

THE CLERK: Richardson.

CHAIRMAN SAINE: Richardson on visual is signifying aye.

THE CLERK: Saine.
CHAIRMAN SAINE: No.
THE CLERK: Torbett.
REPRESENTATIVE TORBETT: No.
THE CLERK: Bell.
REPRESENTATIVE BELL: No.
THE CLERK: Stevens.
Hall.
CHAIRMAN HALL: No.
CHAIRMAN SAINE: We'll try one time -- one more time with Representative Hastings.
Representative Hastings, if you can come to your video or signify with the app there, with the thumbs up or thumbs down, whichever you prefer.
REPRESENTATIVE HASTINGS: Can you hear ne now, Mr. Chair?
CHAIRMAN SAINE: The chair sees no response from Representative Hastings.
The clerk --
COMMITTEE MEMBERS: There he is.
CHAIRMAN SAINE: Representative Hastings signifies no. Thank you, sir.
THE CLERK: 7 yes; 14 no.

CHAIRMAN SAINE: The amendment fails.

Next in our stack of stuff, try for HBA Amend 3 which looks like Cumberland county. Who's the maker of this amendment? Who wants to present?

Representative Reives, you're recognized.

REPRESENTATIVE REIVES: All right. And thank you for that, Mr. Chair.

And what I would note for the committee is this amendment does not split any VTDs, does not double-bunk any incumbents. We believe it better follows the committee's criteria in two ways. First, other than Fayetteville, there are no municipality splits. The chair's map splits the town of Hope Mills. Second, this amendment has a better average compactness score than the chair's map, and therefore we would ask that the committee adopt the amendment.

CHAIRMAN SAINE: Okay. You've heard the presentation on the amendment. Any --

CHAIRMAN HALL: Mr. Chairman.

CHAIRMAN SAINE: Representative Hall and then Representative Cooper-Suggs.

CHAIRMAN HALL: Mr. Chairman, I'll

yield to Representative Cooper-Suggs.

CHAIRMAN SAINE: Representative Cooper-Suggs, you're recognized.

REPRESENTATIVE COOPER-SUGGS: Thank you, Mr. Chair, and thank you, Representative Hall. I have a question that I'd like to ask.

The amendment, as Leader Reives says, does not split Hope Mills, but why does your map split the town?

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: 95 percent of Hope Mills is not split in the map. Well -- and I'd like to be recognized at the appropriate time to speak to the amendment.

CHAIRMAN SAINE: You're recognized.

CHAIRMAN HALL: And I use 95 percent as a rough figure. But as to this particular map, again, I'll note, I've seen this amendment last night. The map that I put out was put out over a week ago now with precinct-level data. I wanted to give the public time to look at it and make whatever suggestions they wanted to make. I seen this one, again, last night.

Cumberland county's been subject to

intense litigation over the course of the last decade in state and federal courts, and as a result, the map that we currently have on our current districts has been upheld in court. And so again, going with the same theory as some of the previous groupings, my goal in this map was to make as few changes as reasonably necessary with population shifts to ensure that we continued to have a legal map, and that's what you have before you.

REPRESENTATIVE COOPER-SUGGS: I have another question.

CHAIRMAN SAINE: Representative Cooper-Suggs.

REPRESENTATIVE COOPER-SUGGS: Yes, just to follow up.

Chairman Hall, for Districts 27 and 28, before we pass these maps, are you going to take any steps to ensure that African American voters are not packed, being packed into these maps?

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Thank you, Mr. Chairman.

As previously said, this map has been upheld -- the current -- the current districts

we have has been upheld in court. This map makes the minimal changes to that map, and so I am confident that this will be upheld in court.

CHAIRMAN SAINE: Any others wishing to speak on the amendment? Seeing none, we will move to a roll call vote.

The clerk will call the roll.

THE CLERK: Adams.

REPRESENTATIVE ADAMS: No.

THE CLERK: Brockman.

CHAIRMAN SAINE: And just for those on Webex know, they're working on the audio now.

Brockman signifies aye with a thumbs up.

THE CLERK: Carney.

REPRESENTATIVE CARNEY: Aye.

THE CLERK: Cooper-Suggs.

REPRESENTATIVE COOPER-SUGGS: Aye.

THE CLERK: Dixon.

REPRESENTATIVE DIXON: No.

THE CLERK: Hardister.

REPRESENTATIVE HARDISTER: No.

THE CLERK: Harrison.

REPRESENTATIVE HARRISON: Aye.

THE CLERK: Hastings.

Hawkins.
REPRESENTATIVE HAWKINS: Aye.
THE CLERK: Jones.
REPRESENTATIVE JONES: No.
THE CLERK: Mills.
REPRESENTATIVE MILLS: No.
THE CLERK: Reives.
REPRESENTATIVE REIVES: Aye.
THE CLERK: Rogers.
REPRESENTATIVE ROGERS: No.
THE CLERK: Szoka.
REPRESENTATIVE SZOKA: No.
THE CLERK: Warren.
REPRESENTATIVE WARREN: No.
THE CLERK: Zachary.
REPRESENTATIVE ZACHARY: No.
THE CLERK: Richardson.
UNIDENTIFIED SPEAKER: He's a yes.
CHAIRMAN SAINE: Richardson has signified yes, thumbs up.
THE CLERK: Saine.
CHAIRMAN SAINE: No.
THE CLERK: Torbett.
REPRESENTATIVE TORBETT: No.
THE CLERK: Bell.

REPRESENTATIVE BELL: No.

THE CLERK: Stevens.

Hall.

CHAIRMAN HALL: No.

CHAIRMAN SAINE: And the chair will also note that Representative Richardson is having fun with emojis, and Representative Hastings has signified no.

THE CLERK: 7 yes; 14 no.

CHAIRMAN SAINE: The amendment does fail.

The chair has been informed it is time for us to go to session. We're going to stand at ease as a committee and we will come back ten minutes immediately after session.

UNIDENTIFIED SPEAKER: Mr. Chair, can we leave our stuff.

CHAIRMAN SAINE: You can leave your stuff in the room. It will be attended to while we're in session.

[At ease.]

(Transcription from YouTube ended at 10:07:09 and started again at 10:59:42.)

CHAIRMAN SAINE: ... in the room anticipating that he may be presenting these.

Let's see if this is one of his amendments, but we'll give it a few minutes. If somebody would like to text him and tell him we're starting.

REPRESENTATIVE HARRISON: And, Mr. Chair, I don't mind trying to offer an amendment in his name if you want to get moving while we're waiting on him. It's up to the committee.

CHAIRMAN SAINE: Yeah. The chair will give him a moment if anyone gets a response back. You got him on the phone.

UNIDENTIFIED SPEAKER: What are we looking at?

CHAIRMAN SAINE: So you can go ahead and pull up HBV Amend 5. Stokes is at the top of that one.

CHAIRMAN HALL: Mr. Chairman.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: I've called Representative Reives. He's on his way up right now, so if we can give him just a minute.

CHAIRMAN SAINE: We will certainly suspend until he arrives.

We're going to start with HBV Amend 5, and it's got Stokes in yellow at the top.

Representative Hall, do you know if we've got the audio fixed for the folks on Webex?

CHAIRMAN HALL: If we can just direct staff, make sure that the audio is working for the folks on Webex.

REPRESENTATIVE RICHARDSON: Can you hear me.

CHAIRMAN SAINE: Representative Richardson, we can hear you, sir. Thank you for the mic check.

Representative Reives, we'll give you just a moment to get settled. We're looking at the HBV Amend 5 which has got Stokes county in yellow at the top.

REPRESENTATIVE REIVES: Thank you for that, Mr. Chair.

CHAIRMAN SAINE: Yes, sir. When you get settled, just let me know.

REPRESENTATIVE REIVES: All right.

Okay, I'm ready to proceed. Thank you.

CHAIRMAN SAINE: Yes, sir. And is this your amendment?

REPRESENTATIVE REIVES: Yes, it is.

CHAIRMAN SAINE: Okay. You are

recognized, sir.

REPRESENTATIVE REIVES: All right. Thank you.

I would ask the committee consider supporting this amendment. This amendment does not double-bunk any incumbents; it does not splitting any VTDs. It does split Walkertown and Winston-Salem which is the same as the chair's map. And this amendment better complies with our criteria by not splitting Tobaccoville. This amendment also has better average compactness scores across all five districts. I would ask the committee to consider adopting the amendment.

CHAIRMAN SAINE: You've heard the amendment. Are there any questions or commentary?

Representative Hall.

CHAIRMAN HALL: Thank you, Mr. Chairman.

Members, I took the same approach with this one as I previously have stated in other parts of the map, and that is Forsyth has been heavily litigated over the course of the last decade, and so I started with the current set of

districts and tried to make changes based upon population. One of the changes that had to be made in this grouping is the change between Stokes and Yadkin counties. The prior grouping had Yadkin county. This grouping has Forsyth and Stokes county, and so I basically swapped Stokes and Yadkin and then tried to make minimal changes to the district, again, knowing that this has been heavily litigated and trying to stick with something similar to what was already there. So I would respectfully ask the committee to vote no on the amendment.

CHAIRMAN SAINE: Thank you.

Representative Harrison.

REPRESENTATIVE HARRISON: Thank you, Mr. Chair. Thank you, Chair Hall. I just had a couple of questions.

In looking at the map -- so as Representative Reives said, the compactness scores are quite different in the amendment that is before you and the proposed PCS. So the -- specifically the Reock is .52, which is great, and Chair Hall's map is .42, and then on the Polsby-Popper it's .46 to .33, which I would say is a fairly significant difference on the

compactness scores.

But if you'll look at on the Stokes -- on proposed House District 69, you see that weird finger that goes down into -- into Forsyth county, into Winston-Salem and takes out 12 percent of Winston-Salem residences and puts them in with Stokes county, which I would say is probably not a good fit. It seems like it would make more sense to keep Winston-Salem a little bit more whole. So I am trying to figure out why you did it the way you did it, unless you've already answered that.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: That change was made to keep Wake Forest whole.

REPRESENTATIVE HARRISON: Follow-up.

CHAIRMAN SAINE: Representative Harrison, you are recognized for a follow-up.

REPRESENTATIVE HARRISON: And if I could also ask why you split the town of Tobaccoville. Or the amendment that Representative Reives is offering does not split Tobaccoville.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Again, this is a map

that I received last night. My map has been out for nearly ten days now. Members have had a chance to look at it. Nobody came to me until last night to try to change this map.

I stuck with what the current map was and tried to make minimal changes to it. The result is a map that complies with our criteria and also complies with a similar map to what the courts have already upheld. I would ask you to vote no on the amendment.

CHAIRMAN SAINE: Representative Harrison.

REPRESENTATIVE HARRISON: And just one more follow-up.

And I appreciate that response, Chair Hall. I do want to just point out, sort of in general, you mentioned this a couple of times about making minimal changes, but we have other -- we have other proposed districts where we started from scratch, say Buncombe county, and we have nuisances data and new county groupings, so I think it is worth contemplating making more compact districts in different configuration, and I will just end there. Thank you.

CHAIRMAN SAINE: Thank you. Any others wishing recognition.

Seeing none -- Representative Richardson on Webex.

REPRESENTATIVE RICHARDSON: Yes. Thank you, Mr. Chair. I'll be very brief.

I would hope that rather than looking at when the amendment came in, and I know it's frustrating and it's hard to compile all this, that we look at the actual merits of this. And while I do think it's important that we keep Wake Forest together, but taking Tobaccoville out of it, it seems like to me we can do a little bit better, and I think this amendment does that, so I would encourage folks to vote for the amendment. Thank you.

CHAIRMAN SAINE: Thank you, Representative Richardson.

Any others wishing recognition?

Seeing none, as previously asked by Representative Reives, we will move to a roll call vote, and the clerk will call the roll.

THE CLERK: Adams.

REPRESENTATIVE ADAMS: No.

THE CLERK: Brockman.

REPRESENTATIVE BROCKMAN: Yes.
THE CLERK: Carney.
REPRESENTATIVE CARNEY: Aye.
THE CLERK: Cooper-Suggs.
REPRESENTATIVE COOPER-SUGGS: Aye.
THE CLERK: Dixon.
REPRESENTATIVE DIXON: No.
THE CLERK: Hardister.
REPRESENTATIVE HARDISTER: No.
THE CLERK: Harrison.
REPRESENTATIVE HARRISON: Aye.
THE CLERK: Hastings.
CHAIRMAN SAINE: Representative Hastings -- and the clerk, did you record Representative Brockman as a yes?
THE CLERK: Yes.
CHAIRMAN SAINE: Okay. Representative Hastings signifies no.
THE CLERK: Hawkins.
REPRESENTATIVE HAWKINS: Aye.
THE CLERK: Jones.
REPRESENTATIVE JONES: No.
THE CLERK: Mills.
REPRESENTATIVE MILLS: No.
THE CLERK: Reives.

REPRESENTATIVE REIVES: Aye.
THE CLERK: Rogers.
REPRESENTATIVE ROGERS: No.
THE CLERK: Szoka.
REPRESENTATIVE SZOKA: No.
THE CLERK: Warren.
REPRESENTATIVE WARREN: No.
THE CLERK: Zachary.
REPRESENTATIVE ZACHARY: No.
THE CLERK: Richardson.
REPRESENTATIVE RICHARDSON: Aye.
THE CLERK: Saine.
CHAIRMAN SAINE: No.
THE CLERK: Torbett.
REPRESENTATIVE TORBETT: No.
THE CLERK: Bell.
REPRESENTATIVE BELL: No.
THE CLERK: Stevens.
Hall.
CHAIRMAN HALL: No.
THE CLERK: 7 yes; 14 no.
CHAIRMAN SAINE: The amendment does fail.
Members, next, choosing from the stack here, I've got HBV Amend 6. Looks like Guilford

county. I'll give you a moment to pull that up.

And who's the sponsor of that amendment? All right. Representative Reives.

REPRESENTATIVE REIVES: Thank you, Mr. Chair.

And like we've just seen with the prior amendment, the differences in compactness and natural-looking districts I think are clear when comparing these to the map that we're presented with as the overall chair map. The average Reock score for these six districts in amendment is 52, compared to 40 for the main map; Polsby-Popper is 43 compared to 30.

And I know that -- we've seen a lot of this, but I would make the same argument here that with the compactness and with the natural look, we'd ask that you support this amendment.

CHAIRMAN SAINE: Thank you. Others wishing recognition.

Representative Hall.

CHAIRMAN HALL: Thank you, Mr. Chairman.

Members, as previously stated and as the same for Guilford county. Guilford county was heavily litigated over the course of the

last decade, so the chair took measures to try to make minimal changes. My map moved only four total precincts from the 2020 map that was approved by the court, and the proposed amendment completely changes how Guilford county's drawn and the district that the members currently represent, so I would respectfully ask the committee members to vote no.

CHAIRMAN SAINE: Any others wishing recognition.

Representative Harrison.

REPRESENTATIVE HARRISON: Thank you, Mr. Chair, and thank you, Chair Hall.

I wanted to reiterate, I think Representative Reives commented about the compactness, and it's an important criteria in the criteria that we are operating under in drawing maps that shouldn't be understated. But I was wondering why you split the town of Summerfield into three districts.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Again, I received this amendment last night with no prior warning. No member came to me to talk about, for example, the question the lady just asked whatsoever.

Again, I made minimal changes. I moved only four precincts from the map in 2020 to deal with population shifts. This map comports with prior court rulings, and I ask you to vote no on the amendment.

CHAIRMAN SAINE: Any others wishing recognition.

Representative Harrison.

REPRESENTATIVE HARRISON: Just a quick follow-up.

I disagree -- I want to encourage members to support this amendment because I think the compactness, which is a criteria in drawing the maps, is much better than the current proposal, and also we have a municipality that is not going to be split in the amendment that is being offered, so I encourage you to support Representative Reives' amendment. Thank you.

CHAIRMAN SAINE: Any others on Webex or here in the room. Seeing none, the clerk will call the roll.

THE CLERK: Adams.

REPRESENTATIVE ADAMS: No.

THE CLERK: Brockman.

CHAIRMAN SAINE: Representative Brockman. Representative Brockman signifies aye.

THE CLERK: Carney.

REPRESENTATIVE CARNEY: Aye.

THE CLERK: Cooper-Suggs.

REPRESENTATIVE COOPER-SUGGS: Aye.

THE CLERK: Dixon.

REPRESENTATIVE DIXON: No.

THE CLERK: Hardister.

REPRESENTATIVE HARDISTER: No.

THE CLERK: Harrison.

REPRESENTATIVE HARRISON: Aye.

THE CLERK: Hastings.

REPRESENTATIVE HASTINGS: No.

THE CLERK: Hawkins.

REPRESENTATIVE HAWKINS: Aye.

THE CLERK: Jones.

REPRESENTATIVE JONES: No.

THE CLERK: Mills.

REPRESENTATIVE MILLS: No.

THE CLERK: Reives.

REPRESENTATIVE REIVES: Aye.

THE CLERK: Rogers.

REPRESENTATIVE ROGERS: [Inaudible.]

THE CLERK: Szoka.
REPRESENTATIVE SZOKA: No.
THE CLERK: Warren.
REPRESENTATIVE WARREN: No.
THE CLERK: Zachary.
REPRESENTATIVE ZACHARY: No.
THE CLERK: Richardson.
REPRESENTATIVE RICHARDSON: Aye.
THE CLERK: Saine.
CHAIRMAN SAINE: No.
THE CLERK: Torbett.
REPRESENTATIVE TORBETT: No.
THE CLERK: Bell.
REPRESENTATIVE BELL: No.
THE CLERK: Stevens.
Hall.
CHAIRMAN HALL: No.
THE CLERK: 7 yes; 14 no.
CHAIRMAN SAINE: And the amendment fails.
Next we will take up HCE Amend 1 which is Pitt county. Who's the sponsor of this one?
Representative Reives, you're recognized.
REPRESENTATIVE REIVES: Thank you,

Mr. Chair.

And I would ask that the committee support this particular amendment. In the chair's map in my opinion will not be as compact as this map, and I've tried to improve on the compactness here. When you look at all the scores that we normally look at, it scores better on both scores, and also this amendment does not split the town of Winterville while the chairman's map, so no split VTDs, no double-bunked incumbents. I ask for your support.

CHAIRMAN SAINE: Thank you, sir.

Representative Hall.

CHAIRMAN HALL: Thank you, Mr. Chairman.

Members, again, I ask you to vote no on the amendment. I believe that my map does a better job of keeping municipalities whole. Winterville in this map is mostly unsplit. Again, I'd ask for you to vote the amendment down.

CHAIRMAN SAINE: Representative Hawkins.

REPRESENTATIVE HAWKINS: Yes, sir.

Chairman Hall, I want to thank you for being willing to answer questions today. And, you know, having grown up in eastern North Carolina, I'm still vaguely familiar with sort of the landscape, and so it really does beg the question about the town of Winterville. You know, the amendment that Representative Reives put forward does keep it intact.

And so I guess the question is is why didn't yours, and what was the decisionmaking that sort of went into your splitting of Winterville?

CHAIRMAN HALL: Thank you for the question.

CHAIRMAN SAINE: Representative Hall, you are recognized.

CHAIRMAN HALL: Thank you, sir.

You know, again, I'll go back to this amendment was just given to me last night. And I always enjoy working with the gentleman on redistricting, and as I've said, you're very thoughtful on these issues, and I appreciate that.

The position that I'm put in tonight is I've been in this room for three weeks drawing

maps. You've been in here some, but, you know, this is another area of the map where in my opinion, had I heard from other -- from members of the minority party, you know, we may have been able to give some of that input, but again, this is sort of sprung on me in the sense that I do want to give Representative Reives credit for letting me know -- he and I discussed amendments today, but as you know, Representative Hawkins, this is complicated stuff. And the map that I've got in front of me, I can't tell what cities are where.

Again, I know that the map that we currently have does a better job of keeping Winterville whole, and for those reasons I would ask members to vote no on the amendment.

CHAIRMAN SAINE: Representative Hawkins.

REPRESENTATIVE HAWKINS: Follow-up --

CHAIRMAN SAINE: And, Representative Richardson, I've got you next.

REPRESENTATIVE HAWKINS: And thank you so much for that answer. And again, I look forward to, you know, many more times of working on these maps with you because it seems like

that's where we're headed for this decade.

But one of the things that I want to make sure of, of course, is, again, sort of being familiar with the landscape and even in Pitt county, we know that voters live on different sides of town. And so are you concerned about sort of packing and sort of the ways that one district seems pretty -- potentially pretty heavy with African American voters? I know you did not take this into consideration due to our rules and what we voted on, but I do want to make sure that if we find out that this is the case, how do we approach that?

CHAIRMAN HALL: I have not looked at race at all, Representative Hawkins, and so I can't answer that question.

REPRESENTATIVE HAWKINS: Thank you, Mr. Chairman. Follow-up.

CHAIRMAN SAINE: You are recognized for a follow-up.

REPRESENTATIVE HAWKINS: And I -- you know, I understand that we -- as this process has gone on, things do get presented with not -- you know, without the opportunity to be

fully digestible even for a skillful lawyer like yourself, but one of the things that I -- you know, before I ask my next question I'll just say this as a statement.

We're only bound by the ways in which we do this and sort of our own timelines and our own criteria so, you know, if the chairman feels that, you know, we don't have enough time to digest some of this, I do kindly offer, Mr. Chairman, that we look at, you know, pushing back our primaries and giving ourselves more time so that we can do that because I do believe that the people of North Carolina would want us to get it right, and I think, as you have so clearly stated, we're only supposed to do this once a decade, and so I want to make sure that we get a chance to, but I'll ask my question now. That was just my statement, Mr. Chairman.

So one of the things, too, is that, you know, the number of the ways in which you split these precincts is -- you know, didn't necessarily seem like you had to. Was there any rhyme or reason for the split of VTDs?

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Again, Representative

Hawkins, the gentleman's asking me just a general question tonight and, you know, sort of being bombarded. And I don't mean that as a --

REPRESENTATIVE HAWKINS: Oh, sure.

CHAIRMAN HALL: -- as a criticism of the gentleman, but we have gone through the most -- the most transparent process in this state's history. I literally drew this in in this committee room. Anybody in the public can go back and watch this video.

I believe that this map complies better with our criteria than the amendment. I don't have a lot of information about the amendment other than a picture of it in front of me that doesn't -- doesn't contain any of the VTDs, and so therefore I would ask the folks -- the members to oppose the amendment.

CHAIRMAN SAINE: Representative Hawkins.

REPRESENTATIVE HAWKINS: Last question.

And, you know, specific to sort of your map, and not the one that was put forth to you tonight, because I do understand that being sort of tougher to digest, but for the one that you drew, that, you know, you did within the last

three weeks, it seems that the southern -- it's specifically those southern precincts that border Lenoir county that seem to be one of the ones that -- you know, some of the issue that I want to sort of take note to and just sort of get a little bit of a thought process behind, you know, why we decided to do those because, you know, the way the county is broken up, it just didn't seem like it had to be done that way. So this is just referring specifically to the map that you drew, Mr. Chairman.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Again, Representative Hawkins, the map complies with the criteria. It actually -- it looks -- in my opinion, it looks like a better district when you look at Pitt county compared to the amendment, basically splitting the county in half from -- a northern portion and a southern portion, and I would ask the committee members to oppose the amendment.

CHAIRMAN SAINE: Representative Richardson -- Representative Hawkins, did you exhaust your question?

Okay. Representative Richardson, you are recognized.

REPRESENTATIVE RICHARDSON: Yes. Just for a brief making a point.

I don't know much, but I know this, that whenever you take a county as vital -- and I want to underscore vital -- to eastern North Carolina as this county is and you make it less competitive on both sides, it's not good.

You know, I know what the criteria are, but everybody in this room knows exactly what's going on here, and it needs to be -- this -- one of those districts needs to be a very competitive district. We get better people up here when we have competitive districts. Thank you.

CHAIRMAN SAINE: Thank you, Representative Richardson.

Any others wishing recognition.

Representative Hall.

CHAIRMAN HALL: Mr. Chairman, I'll yield to Representative Reives.

CHAIRMAN SAINE: I'm sorry. Representative Reives.

REPRESENTATIVE REIVES: Thank you, Mr. Chair, and thank you, Mr. Chair.

I had one question with Pitt. One of

the things that we've talked about -- first I'll make a statement just for clarification. And I appreciate the chair's comments earlier that, you know, this wasn't an intentional spring. You know, staffs had to do a yeoman's job trying to get all of this stuff together for all of us, and we started putting together amendments as soon as we could based on once we saw the map we'd be working from. We did think it would be unproductive that every time somebody came in here and did a map that we would then come right behind them and tell them, hey, you've got to fix this or do this, and I tried to be considerate of people's process.

But with that being said, my question is so far with the amendments we've had, one of the things that we've emphasized have been minimalist changes to the prior maps. My question is what is it that was different about this county that -- you know, because, clearly, I mean, when you look at the maps and you look at the former map, there haven't been minimalist changes here but there have actually been a lot of changes. What is it about this particular map that caused this to have so many more

changes?

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: One of the things was that previously Pitt county had roughly two and a half members and now, because of population changes, they just have two members. And so just because of that fact alone, it's going to have to change. And again, I want to -- I do want to correct a couple of things that were said.

This does not -- this grouping in this map for Pitt county does not split any precincts at all in the chair's map.

And the other point that I want to speak to is Representative Richardson's comments about outcomes. I have not looked at any political data in drawing these maps, and so I do not know what the partisan outcome may be.

CHAIRMAN SAINE: Any others wishing recognition on the amendment. Seeing none, we'll move to a roll call vote. The clerk will call the roll.

THE CLERK: Adams.

REPRESENTATIVE ADAMS: No.

THE CLERK: Brockman.

CHAIRMAN SAINE: Brockman signifies aye.

THE CLERK: Carney.

REPRESENTATIVE CARNEY: Aye.

THE CLERK: Cooper-Suggs.

REPRESENTATIVE COOPER-SUGGS: Aye.

THE CLERK: Dixon.

REPRESENTATIVE DIXON: No.

THE CLERK: Hardister.

REPRESENTATIVE HARDISTER: No.

THE CLERK: Harrison.

REPRESENTATIVE HARRISON: Aye.

THE CLERK: Hastings.

REPRESENTATIVE HASTINGS: No.

THE CLERK: Hawkins.

REPRESENTATIVE HAWKINS: Aye.

THE CLERK: Jones.

REPRESENTATIVE JONES: No.

THE CLERK: Mills.

REPRESENTATIVE MILLS: No.

THE CLERK: Reives.

REPRESENTATIVE REIVES: Aye.

THE CLERK: Rogers.

REPRESENTATIVE ROGERS: No.

THE CLERK: Szoka.

REPRESENTATIVE SZOKA: No.

THE CLERK: Warren.

REPRESENTATIVE WARREN: No.

THE CLERK: Zachary.

REPRESENTATIVE ZACHARY: No.

THE CLERK: Richardson.

REPRESENTATIVE RICHARDSON: A big aye.

THE CLERK: Saine.

CHAIRMAN SAINE: No.

THE CLERK: Torbett.

REPRESENTATIVE TORBETT: No.

THE CLERK: Bell.

REPRESENTATIVE BELL: No.

THE CLERK: Stevens.

Hall.

CHAIRMAN HALL: No.

THE CLERK: 7 yes; 14 no.

CHAIRMAN SAINE: In the opinion of the chair, and according to the vote, the amendment fails.

REPRESENTATIVE RICHARDSON: Mr. Chairman, a point of order.

CHAIRMAN SAINE: You're recognized for a point.

REPRESENTATIVE RICHARDSON: In the interest of time, I think the last five votes have been 7 to -- 14 to 7. Can we short circuit this and say does anybody want to change their vote from the last five votes on the next amendment, speeding it up.

CHAIRMAN SAINE: Representative Richardson, while the chair certainly appreciates the notion behind the request, I'm going to honor Representative Reives' original request. And we only have two more to go so I think we can make it through, but I do appreciate it and thank the gentleman.

Next we will take up HBA Amend 2 which is Wake county. Who is the sponsor of this amendment?

Representative Reives, you are recognized.

REPRESENTATIVE REIVES: And thank you for honoring the ayes and nos request. I appreciate that.

CHAIRMAN SAINE: Yes, sir.

REPRESENTATIVE REIVES: And as to this amendment, like in the chair's map, it doesn't split any VTDs, doesn't double-bunk anybody.

The maps also have the same Reock compactness averages, but this amendment has a much better Polsby-Popper average, and so we feel it complies better in our compactness criteria, and therefore, based on that and based on the fact that we do a better job of not splitting any municipalities, like Rolesville, Morrisville, Fuquay-Varina, we'd ask that you support this amendment.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Thank you, Mr. Chairman.

Members, the chair's map does a better job of keeping the smaller, more rural municipalities in Wake county intact instead of lumping them in with Raleigh. Examples are Fuquay-Varina, Apex, Wake Forest, Roseville, and Angier.

And so the other note that the chair would make, again, and I made this a few times, but I want to be clear. I had -- we had -- there's a tab on our website for member-submitted maps, and I submitted a map, and I asked others, and I've announced this on the floor several times, get us a map if you

want to put it out. So none of these amendments, none other than my map, were put out as member-submitted maps for members of the public to be able to take a look at.

So again, as was the case for the other amendments, I would ask you to oppose this amendment.

CHAIRMAN SAINE: Thank you. Those wishing recognition.

Representative Hawkins.

REPRESENTATIVE HAWKINS: Thank you.

And, you know, I want to make sure that the chairman hears that, you know, the time and the talent that went into drawing these is something that I'm just enamored with and so that's why I have sort of the questions that I do about sort of how you originated with some of these maps and sort of how you -- because Wake county is -- you know, it's the most populous county in the state so it's not an easy draw, and that was probably 50 percent of your time here while you were drawing.

But one of the things that I wanted to ask so that we can -- you know, especially for those who are in the committee just for their

pleasure and for those who are potentially watching at home, one of the questions, you know, for me is, you know, where did you start? And as a potential starting point, you know, did you look at and start with District 35? And so District 35 is sort of -- according, I guess -- you know, I make sure that I would start with Durham, but then, you know, I sort of center everything else around that, but District 35 is southwest Wake county. And so did you start there, you know, with District 35 in the north and then 39 and 40 in the south before filling in the rest of the map? So walk us through how you built your -- your Wake county structure.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Thank you, Representative Hawkins.

I know the gentleman's question is in good faith, but from my perspective, I sat in this room for three weeks, I made probably thousands -- or directed thousands of clicks on this map, and so to expect me to remember literally which one of these districts I started on in this map I don't believe is a fair question. And again, I'm not saying it's a

question that's in bad faith at all, but it is 8:30, I've been in here for three weeks, but I will try to answer the gentleman's question.

When drawing a map like Wake county, it's typically easier to start somewhere on the outside than it is to sort of start in the beginning and going out. And the gentleman knows, you sat in here and drawn some of these maps as well. So if the gentleman goes back and looks at the instant replay of how I did it, he'll be able to see which one I started with.

REPRESENTATIVE HAWKINS: Follow-up, Mr. Chairman.

CHAIRMAN SAINE: You are recognized for a follow-up, Representative Hawkins.

REPRESENTATIVE HAWKINS: I didn't realize that was an option, but now I may take you up on that.

The follow-up question for me is, you know, the amendment that was given -- was put forth does split fewer municipalities than your map, Mr. Chairman, in all due respect. And so in particular, why is Morrisville split 50/50 between two districts? Is there -- and I know, again, in broad strokes, you may not

remember -- well, in broad strokes, you may remember, but detail you may not, but that's a pretty broad question about a major municipality and why it was split in half between two districts.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Well, in large part, it is because of Adcock and Dahle's residences makes it very difficult to draw a map that doesn't do that.

REPRESENTATIVE HAWKINS: Thank you, Mr. Chairman. Follow-up.

CHAIRMAN SAINE: You are recognized for a follow-up.

REPRESENTATIVE HAWKINS: And so one of the things -- and I do, I think -- not to -- again, with all due respect, you know, the amendment has a better compactness score. And again, you put a lot of work into yours, and so one of the -- that was put forth, but one of the questions is is that if you look at, you know, the VTDs and if you're looking here, you look at what -- this looks like -- almost like a red finger. And so, you know, why did you include that red finger VTD in District 45 instead of in

District 35? And so if you're, again, looking at the map here, you're looking at District, sort of, 35, which is southwest Wake county, sort of towards the bottom of Wake county, and if you're looking at the one that's sort of, you know, next to it, it sort of has a little bit of a red finger. And so I wanted to make sure that we sort of asked the question about sort of the red finger VTD that looks like that. And I'm just -- you know, that's something that we can all sort of look at and use as a common because the majority knows what a finger looks like, but thinking about sort of how you got to that process and why that was put there.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Representative Hawkins, that is the shape of the VTDs, and my map does not split any VTDs in Wake county.

REPRESENTATIVE HAWKINS: Okay. Thank you, Mr. Chairman.

CHAIRMAN SAINE: Thank you, Representative Hawkins.

Any others wishing recognition? Seeing none, the clerk will call the roll.

THE CLERK: Adams.

REPRESENTATIVE ADAMS: No.
THE CLERK: Brockman.
REPRESENTATIVE BROCKMAN: Aye.
THE CLERK: Carney.
REPRESENTATIVE CARNEY: Aye.
THE CLERK: Cooper-Suggs.
REPRESENTATIVE COOPER-SUGGS: Aye.
THE CLERK: Dixon.
REPRESENTATIVE DIXON: No.
THE CLERK: Hardister.
REPRESENTATIVE HARDISTER: No.
THE CLERK: Harrison.
REPRESENTATIVE HARRISON: Aye.
THE CLERK: Hastings.
REPRESENTATIVE HASTINGS: No.
THE CLERK: Hawkins.
REPRESENTATIVE HAWKINS: Aye.
THE CLERK: Jones.
REPRESENTATIVE JONES: No.
THE CLERK: Mills.
REPRESENTATIVE MILLS: No.
THE CLERK: Reives.
REPRESENTATIVE REIVES: Aye.
THE CLERK: Rogers.
REPRESENTATIVE ROGERS: No.

THE CLERK: Szoka.

REPRESENTATIVE SZOKA: No.

THE CLERK: Warren.

REPRESENTATIVE WARREN: No.

THE CLERK: Zachary.

REPRESENTATIVE ZACHARY: No.

THE CLERK: Richardson.

REPRESENTATIVE RICHARDSON: Aye.

THE CLERK: Saine.

CHAIRMAN SAINE: No.

THE CLERK: Torbett.

REPRESENTATIVE TORBETT: No.

THE CLERK: Bell.

REPRESENTATIVE BELL: No.

THE CLERK: Stevens.

Hall.

CHAIRMAN HALL: No.

THE CLERK: 7 yes; 14 no.

CHAIRMAN SAINE: In the opinion of the chair and according to the vote, the amendment fails.

The chairman is in possession of one last amendment which we attempted to take up earlier from Representative Reives. It's HBA Amend 1, and it's Mecklenburg county. We

were giving Chairman Hall a little bit of time to gather some information. We're back on that amendment.

Representative Hall, you're recognized.

CHAIRMAN HALL: Thank you, Mr. Chairman.

And I want to speak to Representative Carney's question. And one of the reasons I wanted to get a copy of the map because I -- and I may have misunderstood the lady, but I thought I heard the lady say that we had two split precincts, and my recollection, off the top of my head, was we only had one split precinct in Wake county, so I wanted to get a copy of my map, and I've gotten that. I'm sorry. Mecklenburg county. And I've gotten that now, and I've confirmed that only one precinct is split in Mecklenburg county.

The other thing that I will note on this map is what I did here was essentially start with a version of the current map because the current version of Mecklenburg county, if folks will remember back in 2019, when we redrew these, was basically largely drawn by the Democratic members of the House in this

committee room. And, of course, you know, we were all in front of the computer, but at the time this was one that the Democrats really had a huge amount of input on. And so one thought in drawing it this way was, well, Democrats have had a bunch of input on that and nobody seemed interested in giving me any other input during this process, so I took the prior input into consideration in drawing this map, but it only splits one precinct, and therefore I would ask you to vote no on the amendment.

CHAIRMAN SAINE: Representative Hastings -- excuse me, Representative Hall.

Representative Hastings, your mic is on.

I apologize Representative Hall. Had you concluded your remarks?

CHAIRMAN HALL: I've concluded.

REPRESENTATIVE HASTINGS: I apologize.

CHAIRMAN SAINE: No problem, Representative Hastings.

And the chair does apologize to the committee. We did find one more amendment, so we will have one more left in my stack of stuff, but those wishing recognition on the amendment.

Seeing none, we will move into a roll call vote. The clerk will call the roll.

THE CLERK: Adams.

REPRESENTATIVE ADAMS: No.

THE CLERK: Brockman.

REPRESENTATIVE BROCKMAN: Aye.

THE CLERK: Carney.

REPRESENTATIVE CARNEY: Aye.

THE CLERK: Cooper-Suggs.

REPRESENTATIVE COOPER-SUGGS: Aye.

THE CLERK: Dixon.

REPRESENTATIVE DIXON: No.

THE CLERK: Hardister.

REPRESENTATIVE HARDISTER: No.

THE CLERK: Harrison.

REPRESENTATIVE HARRISON: Aye.

THE CLERK: Hastings.

REPRESENTATIVE HASTINGS: No.

THE CLERK: Hawkins.

REPRESENTATIVE HAWKINS: Aye.

THE CLERK: Jones.

REPRESENTATIVE JONES: [Inaudible.]

THE CLERK: Mills.

REPRESENTATIVE MILLS: No.

THE CLERK: Reives.

REPRESENTATIVE REIVES: Aye.
THE CLERK: Rogers.
REPRESENTATIVE ROGERS: No.
THE CLERK: Szoka.
REPRESENTATIVE SZOKA: No.
THE CLERK: Warren.
REPRESENTATIVE WARREN: No.
THE CLERK: Zachary.
REPRESENTATIVE ZACHARY: No.
THE CLERK: Richardson.
REPRESENTATIVE RICHARDSON: Aye.
THE CLERK: Saine.
CHAIRMAN SAINE: No.
THE CLERK: Torbett.
REPRESENTATIVE TORBETT: No.
THE CLERK: Bell.
REPRESENTATIVE BELL: No.
THE CLERK: Stevens.
Hall.
CHAIRMAN HALL: No.
THE CLERK: 7 yes; 14 no.
CHAIRMAN SAINE: The amendment does fail.
Last, unless someone produces something else, I believe we've got the last amendment.

It's HBV Amend 2, and it's Buncombe county. And who is the sponsor of that amendment?

Representative Reives, you're recognized.

REPRESENTATIVE REIVES: Thank you, Mr. Chair.

In this particular amendment, again, I understand there's been an attempt to stick to minimal changes, and I think on the chair's map on this particular district -- or set of districts, we do have a lot of changes. In both my map and the chair's map, we split Asheville and one smaller municipality in the county. Neither of us split any VTDs, nor double-bunk any incumbents.

I would ask that the committee support my amendment because this proposes a much more compact drawing of the three districts in Buncombe. Average Reock score of my amendments 49 compared to 42. Difference with the Polsby-Popper is even greater with a 32 compared to 23. And because of the huge difference in compactness, I would ask the committee to support this amendment.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Members, in this particular map, Asheville -- we attempted to keep Asheville in as few districts as possible. The amendment essentially slices Asheville into -- as far as I can tell in just looking at this without any municipality overlay and, again, just seeing it last night, along with all the amendments before you and some other proposed amendments, it looks to me like what this does is equally splits Asheville. And I believe that it's better to try to keep Asheville in as few districts as possible, and so therefore I would ask you to oppose the amendment.

CHAIRMAN SAINE: Anyone seeking recognition? Representative Carney.

REPRESENTATIVE CARNEY: Thank you, Mr. Chairman.

And again, I'm going to point out to all the members in here and to the chair, I wish that the podium was back in the middle of the room because over here we have to turn to watch -- look at the people we're speaking to, so I apologize if my back or side is to you, Mr. Chairman.

So I just have a question about the -- obviously, when you look at the map, the chairman's map, Chairman Hall's map and then you look at the configuration of Representative Reives' map, there's a big, vast difference when you look at the compactness of it. I mean, it's blatant.

But I'm just curious that why -- well, the District 16 -- 116 and 117 are in very different shapes, and when you look at the map of Representative Reives, it's very -- it's a map that citizens can look at and it makes sense to them and it shows that it's compact, but we don't have that with the way you've drawn it.

Could you -- could you elaborate on why you chose 116 and 117 to draw them the way you did.

CHAIRMAN HALL: And I believe the numbers are different --

CHAIRMAN SAINE: Representative Hall, you are recognized.

CHAIRMAN HALL: The numbers are different in my map, but, you know, essentially, the amendment splits -- again, splits Asheville. It looks to be sort of an equal -- in equal

spaces. And so what I tried to do is in this map try to put Asheville in two districts rather than trying to split it equally between the three districts to try to keep it as whole as we could, and that's the difference that you see.

REPRESENTATIVE CARNEY: And a follow-up.

CHAIRMAN SAINE: Representative Carney.

REPRESENTATIVE CARNEY: Thank you, and thank you, Mr. Chairman.

In District 117, that district in the last court rulings in the last decade, it was ruled as unconstitutional. It looks very similar as far as partisan gerrymandering. If partisan gerrymandering was -- partisan, rather, data was not used, how did you arrive again to this shape of 117?

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Again, I'm trying to put Asheville in as few districts as we could to try to keep Asheville as whole as we could.

CHAIRMAN SAINE: Any others wishing recognition? Seeing none, we will move into a roll call vote. The clerk will call the roll.

THE CLERK: Adams.

REPRESENTATIVE ADAMS: No.
THE CLERK: Brockman.
REPRESENTATIVE BROCKMAN: Aye.
THE CLERK: Carney.
REPRESENTATIVE CARNEY: Aye.
THE CLERK: Cooper-Suggs.
REPRESENTATIVE COOPER-SUGGS: Aye.
THE CLERK: Dixon.
REPRESENTATIVE DIXON: No.
THE CLERK: Hardister.
REPRESENTATIVE HARDISTER: No.
THE CLERK: Harrison.
REPRESENTATIVE HARRISON: Aye.
THE CLERK: Hastings.
REPRESENTATIVE HASTINGS: No.
THE CLERK: Hawkins.
REPRESENTATIVE HAWKINS: Aye.
THE CLERK: Jones.
REPRESENTATIVE JONES: No.
THE CLERK: Mills.
REPRESENTATIVE MILLS: No.
THE CLERK: Reives.
REPRESENTATIVE REIVES: Aye.
THE CLERK: Rogers.
REPRESENTATIVE ROGERS: No.

THE CLERK: Szoka.
REPRESENTATIVE SZOKA: No.
THE CLERK: Warren.
REPRESENTATIVE WARREN: No.
THE CLERK: Zachary.
REPRESENTATIVE ZACHARY: No.
THE CLERK: Richardson.
REPRESENTATIVE RICHARDSON: Aye.
THE CLERK: Saine.
CHAIRMAN SAINE: No.
THE CLERK: Torbett.
REPRESENTATIVE TORBETT: No.
THE CLERK: Bell.
REPRESENTATIVE BELL: No.
THE CLERK: Stevens.
Hall.
CHAIRMAN HALL: No.
THE CLERK: 7 yes; 14 no.
CHAIRMAN SAINE: And the amendment does fail.
Back on the original proposal. Anyone seeking -- Representative Harrison and then Representative Hawkins.
REPRESENTATIVE HARRISON: Thank you, Mr. Chair. I have a question for Chair Hall.

CHAIRMAN SAINE: You are recognized.

REPRESENTATIVE HARRISON: Thank you.

I'm -- we heard -- we heard a lot of comments from the public about the maps. We -- I think there have been more than 4,000 submitted online. I haven't had a chance to go through all of them, but I'm wondering if you all had a way to -- I've been trying to get through them, but there are a lot.

How did -- did you all have a way to organize those comments and to consider them in terms of the map drawing?

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: I don't know if I really understand the question. We were in the same committee room together listening to what folks were saying. We all had an opportunity to listen to that. The chair has directed -- as the chair of this committee, I've directed staff to regularly send out the public comments to everybody on the committee so we've all had time to read those.

CHAIRMAN SAINE: Representative Harrison.

REPRESENTATIVE HARRISON: Follow-up. I

think my question was just more specifically how were you taking into account public input when you were drawing the maps, but that -- that's good.

I also wondered how -- so if you had criteria that were in conflict -- we had the list of criteria that we had adopted back in August. Was there -- I know that, if I recall, you declined to create a hierarchy, but how did you prioritize when they were in conflict, such as compactness versus splitting voter tabulation districts or splitting municipalities or incumbent protection.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: I looked at it holistically and tried to comply with as much of the criteria as possible.

REPRESENTATIVE HARRISON: I appreciate that. I -- there are -- we heard a lot of comments from the public about the Princeton Gerrymandering Project and how it gave the House map and the Senate map and the proposed Congressional maps grades of F, but I appreciate that.

I'm mindful of the fact that if I

recall from some previous research that we spent $11 million in taxpayer money on the past decade of redistricting litigation, so this drawing maps that are not going to pass court muster is expensive to the taxpayer, and I want us to be mindful that there's a way to do it and a way to do it right, and we thought we had proposed some good amendments that would have fixed some problematic areas. I just will -- those will be it for now. Thank you.

CHAIRMAN SAINE: Thank you.

Representative Hawkins.

REPRESENTATIVE HAWKINS: Thank you, Mr. Chairman.

And hopefully I'm the last voice that you may hear. Hopefully it's one that's impactful and helps to inform decisions about how you want to improve these maps. I'm glad to be that person for you, glad to be that colleague for you.

But one of the things that I want to talk about is the PCS, and so that should be fresh in your mind because we just got that last night and it was, you know, sort of proposed today, so we should be able to sort of discuss

that with a clear mind and potentially some detail.

You know, one thing about Durham is that it has not sort of gone through -- I think what I've heard quite a bit is that, you know, some of these areas have gone through litigation. Durham sort of -- and now this new grouping of Durham and Person have not for whatever reason. I guess I'm glad for it.

But one of the things that I sort of, you know, wanted to sort of dig into the detail just a little bit on is the fact that if, you know, you're looking at sort of this breakdown of how the maps and the individual VTDs were broken down, one thing I guess for the -- sort of the pleasure of the group is could you walk through -- you know, sort of what does it mean when it says VTD and then has all these little numbers by it? Is that something that you can sort of explain? Because not only are we, you know, trying to make better maps, but we're also trying to inform the greater public about sort of how this is going because I think that that's just worth, to me, a little bit of detail because then it sort of sets up another question

about some reasoning and how you wanted to construct VTDs in some of those areas.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: VTD is a voter tabulation district. And some of the numbers that you might see when you're looking at these maps are the census data for folks who live in that particular VTD.

REPRESENTATIVE HAWKINS: Yep. And so that -- follow-up, Mr. Chairman.

CHAIRMAN SAINE: You're recognized.

REPRESENTATIVE HAWKINS: And so, you know, one of the things that we see as you go through this -- thank you for that clarification for the public -- is that as you go through VTD and you're started to looking at VTD 32, VTD 37, VTD 44, VTD 45, you get to a place like VTD 30-2 which in this grouping and the way that it was drawn seems pretty intentional. And so, you know, I'm pretty familiar with this grouping, and so it does sort of beg the detail of the question about after that, you're right. So many different individual census blocks were chosen to sort of build out the rest of this grouping alongside the Person county.

And so again, we just got these, they were just PCS last night so they, you know, should be fresh detail because those decisions should have just been made. Is there a reason that we decided to go into that individual precinct and pick those individual, you know, census blocks in that VTD? Because, you know, again, that sets up my follow-up, Mr. Chairman.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Thank you, and I'll try to answer the gentleman's question.

Because there was no amendment on this particular grouping, I don't have a map -- a layered map that shows which VTDs the gentleman's talking about, but what I can say is that the -- that part of Durham, as you get down into the bottom of District 51 on the chair's map, the precincts or the VTDs are very large in number, and when you get down there it becomes very difficult to try to keep your populations correct.

And so some of the comment that we heard through public comment was the changes in deviations or the discrepancies in deviations, and one of the things that I did today is I went

in and tried to equalize those deviations. And I can tell you, at least as to the change today, that was the purpose of doing that was to change those deviations.

REPRESENTATIVE HAWKINS: Follow-up, Mr. Chairman.

CHAIRMAN SAINE: You are recognized for a follow-up, Representative Hawkins.

REPRESENTATIVE HAWKINS: And related to -- and I'm pretty sure we'll get into some of this tomorrow, too, but, you know, for that side of town, you know, that sort of VTD, we have 30-2 and then VTD 32. And so the detail that I'm following are -- you know, it's not necessarily overlaid in a map, but it is outlined in the PCS. And so not only does it do every VTD that's in a district that also gives all the census blocks that are associated, and so we don't necessarily need the overlay to answer these questions.

But, you know, can you also talk about sort of what you think -- and I know as we have gone through a lot of this, we have talked about communities of interest and we talk about sort of making sure that areas are compact and that,

of course, voters understand who their representative is and people that have things in common. Can you talk about what you think those people in this side of Durham in VTD 32 have in common with the people in Person county in the remainder of the grouping.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Part of the problem, Representative Hawkins, is, you know, the grouping of Person and Durham counties. The gentleman probably agrees that Person and Durham, they don't really have a whole lot in common, but unfortunately, or depending on how you look at it, the Supreme Court has said there's a way to do groupings. And I think everybody agrees this is the optimal county grouping for Durham county, Durham and Person.

Obviously, you've got to include a good chunk of Durham to get enough population into Person. So what I tried to do is to create a district that, as best I could, was compact and complied with our criteria, and I think that's what we've done.

CHAIRMAN SAINE: Thank you. Any others seeking recognition.

Representatives Harrison.

REPRESENTATIVE HARRISON: Thank you, Mr. Chair.

I just wanted to raise a couple questions about the Voting Rights Act. I reviewed Stephenson in advance of today. I'm going to review Gingles tonight again, but Stephenson, from my perspective, mandates that we would draw the Voting Rights Act districts prior to drawing the rest of the plan, so I'm trying to figure out how -- how did you ensure VRA compliance.

CHAIRMAN SAINE: Representative Hall.

CHAIRMAN HALL: Thank you, Mr. Chairman.

And the lady is correct as to what Stephenson says, but the rest of that story is there was a case called Covington versus North Carolina that was from 2016, and in that case the court found there was not sufficient evidence of legally significant racially polarized voting in North Carolina. And so since that time, we have operated under the draws that we've done under a race-blind approach. That has been successful in court,

and so we're going to continue with that.

REPRESENTATIVE HARRISON: Follow-up. Sorry.

CHAIRMAN SAINE: Representative Harrison, you are recognized.

REPRESENTATIVE HARRISON: Thank you.

And I remember Covington because I believe my district was one of the 28 that were race -- considered racially gerrymandered that the legislature had to redraw, and they found them unconstitutional, the districts unconstitutional racial gerrymanders. I'm just reading some facts here, unconstitutional racial gerrymanders, those 28 districts, and they acknowledge that there were two reports before the legislature indicating that there was statistically significant racially polarized voting in the state.

So I will just like -- I disagree with y'all's perspective on this. I think that this is a very big problem for us, and we're reminded of it through communications from the very first day of public comments that we heard back in August. So I just -- I think this is a big problem for us, and I just -- I think we need a

racially polarized voting analysis. I think that in order to comply with Stephenson and the federal Voting Rights Act, excuse me, we need to be mindful of this problem. And I'll stop there. Thank you.

CHAIRMAN SAINE: Any others seeking recognition.

Representative Richardson from Webex. Representative Richardson, we don't have your audio. If you'll unmute your mic.

REPRESENTATIVE RICHARDSON: Thank you, Mr. Chairman, and I'll be very brief.

I just want to raise two points. In listening to us tonight and in watching us tonight, somebody asked a very pointed question, all we pay attention to is what the public hearing citizens demanded of us and requested of us.

And the second observation has to do with this process is virtually impossible to do and to do fairly if you don't listen to what the people are telling us to do. And let's go back to that. We heard time and time and time again that we need to have an impartial committee. And I know it takes a constitutional amendment,

but that's real simple to overcome and that is you can add legislative approval to the recommendation, but we need to have an impartial committee that -- commission that does this and we vote on it and approve it.

But the bottom line is we're not going to be a good body, we're not going to do what we need to do unless we have very competitive districts to draw out the best in all of us, in the ones that are elected. It just is essential that we go back to as many competitive districts as we possibly can have and then we let the people draw these lines. We're just not going to get anywhere. This is -- this process is impossible. A good man like Representative Hall, it's just so hard to do. You just -- you know, and follow all these guidelines and these theorems and these theories and what -- you know, and these precincts.

Let's just draw competitive districts, let the people draw competitive districts and let's move on. That's what we should do. That's what they want us to do. Thank you.

CHAIRMAN SAINE: Thank you.

Representative Carney.

REPRESENTATIVE CARNEY: Thank you, Mr. Chairman.

And to that point I just wanted to share with the members that I looked up, and since 2003, when I came to this legislature, there have been 39 -- 39 independent redistricting commission bills filed. 39. I just wanted you to know that. And that's -- the public has been weighing in all the years I have been up here and we still haven't done it.

CHAIRMAN SAINE: Representative Hawkins.

REPRESENTATIVE HAWKINS: To speak to the bill.

CHAIRMAN SAINE: You are recognized.

REPRESENTATIVE HAWKINS: Thank you.

I just want to sort of talk about the fact that before we sort of go into votes on this fairly soon, the remainder of the body, you know, that democracy just depends on what we do. And so the people -- the ten and a half people that call the great state of North Carolina home sort of depend on the 120 of us, and those specifically on this committee, to make sure that we're making the best decisions possible so

that they can have faith in the systems that we put forth, in the elections process, democracy, and so the way that they will be governed are potentially for the next decade and sort of how they will have relationship with the people who represent them, right. And so many want to make sure that they have a pretty decent hand in that, and so one of the ways, of course, we can always do that is by having fair maps, making sure that something is pretty, you know, dear to me and I know dear to all of you who give of your time and your talent to come to Raleigh is that people have faith in -- faith in these processes, but most importantly that they know who their representatives are; that we keep communities of interest whole so that when voters are making decisions and having conversations that we're talking about some of the same things. And so if a city, municipality is split in half or if an area is sort of placed in -- you know, awkwardly in a district that it doesn't have anything in common with, that sort of hurts the way that people understand and are able to connect to the important work that we do.

And so that goes down to making sure that we lessen the amount of split VTDs, which I know has been a goal; that compactness is something that -- as we look back and make final decisions is something that's absolutely paramount because, again, you know, many of us get a chance to dig into the details, like the chairman and I have just here today, by looking at and actually understanding what a VTD is and what a census block is, but so many people don't. They look at the actual map and they do the eye test, right. They make sure that they understand that, well, it looks like I should be in this area and it looks like, you know, myself and my neighbors should be able to vote for this same person, and when they can't do that, it puts us all in jeopardy.

And again, I want to commend the 120 members who come up here every single day. Some people come here for three or four hours away, some people come from 30 minutes, some people come from ten, but you give up your life, your talent and being able to do something else because you believe -- you know, was it Esse Quam Videri, that we are -- you know, we

are to be rather than we are to seem, and so we want to make sure that we're doing all the things that put us in the best possible light of the people because, again, we don't spend time here until 8:00 or 9:00 just for our health. We do it because we love this state, and so we have to make sure that we are being rather than seeming. And so I just want to leave this committee with this tonight, and I hope that when we have this discussion tomorrow it will be fruitful. Thank you.

CHAIRMAN SAINE: Any others seeking recognition. Seeing none, I believe Representative Torbett has a motion.

REPRESENTATIVE TORBETT: Thank you, Mr. Chairman. My motion is that the House Committee on Redistricting report favorably to House Bill 976 as amended wrote into a new PCS with H976-ABA-31 controlling for Chatham, Lee, Moore, Randolph, and Richmond counties and leave the committee for staff to alter the short title to reflect the new resulting map.

CHAIRMAN SAINE: You have heard the motion, and the clerk will call the roll.

THE CLERK: Adams.

REPRESENTATIVE ADAMS: Aye.
THE CLERK: Brockman.
REPRESENTATIVE BROCKMAN: No.
THE CLERK: Carney.
REPRESENTATIVE CARNEY: No.
THE CLERK: Cooper-Suggs.
REPRESENTATIVE COOPER-SUGGS: No.
THE CLERK: Dixon.
REPRESENTATIVE DIXON: Aye.
THE CLERK: Hardister.
REPRESENTATIVE HARDISTER: Aye.
THE CLERK: Harrison.
REPRESENTATIVE HARRISON: No.
THE CLERK: Hastings.
REPRESENTATIVE HASTINGS: Aye.
THE CLERK: Hawkins.
REPRESENTATIVE HAWKINS: No.
THE CLERK: Jones.
REPRESENTATIVE JONES: Aye.
THE CLERK: Mills.
REPRESENTATIVE MILLS: Aye.
THE CLERK: Reives.
REPRESENTATIVE REIVES: No.
THE CLERK: Rogers.
REPRESENTATIVE ROGERS: Yes.

THE CLERK: Szoka.

REPRESENTATIVE SZOKA: Aye.

THE CLERK: Warren.

REPRESENTATIVE WARREN: Aye.

THE CLERK: Zachary.

REPRESENTATIVE ZACHARY: Yes.

THE CLERK: Richardson.

REPRESENTATIVE RICHARDSON: A regretful no.

THE CLERK: Saine.

CHAIRMAN SAINE: Aye.

THE CLERK: Torbett.

REPRESENTATIVE TORBETT: Aye.

THE CLERK: Bell.

REPRESENTATIVE BELL: Aye.

THE CLERK: Stevens.

Hall.

CHAIRMAN HALL: Aye.

THE CLERK: 14 yes; 7 no.

CHAIRMAN SAINE: The ayes have it. The motion passes.

With no other business being before the committee, we stand adjourned.

(Transcription from YouTube ended at 11:57:36.)

(Transcription from YouTube started at 36:33.)

CHAIRMAN HISE: The committee will come to order. Thank you for everyone being here. Welcome to the Senate Committee on Redistricting and Elections.

Our sergeant-at-arms today are -- for the Senate, John Enloe, Dwight Green, right here, Ed Kessler, Chris Moore, and Hal Roach, right there. Thank you all for being here today in this process.

Members, we have -- on the agenda today, we have three bills, all representing submitted congressional redistricting plans. We will present, as we have with every other bill we do in committee, we will consider each bill individually, and if an appropriate motion is made, we will consider it favorable or unfavorable for review to the floor.

Any questions about process? I wanted to get that out of the way before we begin.

Seeing none, we will begin with Senate Bill 740, Congressional Redistricting Plan 21 CST-13.

Senator Daniels will be recognized to

explain the bill.

CHAIRMAN DANIEL: Thank you, Mr. Chair, members of the committee.

So this is going to be a little dry, but I'm just going to explain the map district by district, beginning with District 1.

So Congressional District 1 is a coastal district. It's anchored in eastern North Carolina. In contains 15 whole counties. The 15 counties are Beaufort, Camden, Carteret, Chowan, Craven, Currituck, Dare, Gates, Hyde, Jones, Lenoir, Pamlico, Pasquotank, Perquimans, and Tyrrell. And it has two partial counties: Onslow and Pitt.

The district takes in the Outer Banks and most of the state's shoreline. Its shape is mostly dictated by the Atlantic Ocean. There are zero municipalities split by the district's boundaries. VTDs are only split for the purpose of equalizing population to zero deviation. This district keeps all of the finger counties in northeastern North Carolina together in the same district as well as most of the counties that run along the Virginia border. Ms. Keesha Adobe spoke at the Pasquotank public hearing and

asked that the northeast be maintained as a community of interest. That public input helped inform the construction of this district.

Congressional District 2.

Congressional District 2 is a district taking in most of rural northeastern North Carolina. It contains 16 whole counties: Bertie, Caswell, Edgecombe, Franklin, Granville, Greene, Halifax, Hertford, Martin, Nash, Northampton, Person, Vance, Warren, Washington, and Wilson. There are two split counties: Pitt and Wayne. There are zero municipalities split by this district. There is one precinct split in Pitt county and one in Wayne county for the purpose of equalizing population.

Congressional District 3.

Congressional District 3 is a district based in southeastern North Carolina. It improves upon the compactness of the current district by keeping mostly rural counties closer to the coast in the same district as the remaining coastal counties. It contains seven whole counties: Bladen, Brunswick, Columbus, Duplin, New Hanover, Pender, and Robeson, and one split county, Onslow. The district contains zero

split municipalities, and the only split VTD is required in order to equalize population.

The district is a product of input from the New Hanover public hearing where Barbara Guerrero asked that the Cape Fear River basin be kept in one congressional district. Herb Harton and Frank Williams, a Brunswick County commissioner, asked that New Hanover and Brunswick counties be kept together, and Keith Graham asked that Bladen and Columbus counties be linked in a district.

Congressional District 4. Congressional District 4 is a nearly perfect four-county district south of where we are right now. It includes Cumberland, Harnett, Johnston, and Sampson counties, and a small portion of Wake -- of Wayne county to balance the population. These counties have similar geography, industry in proximity to the population base in the region near Fayetteville and Raleigh. The district is extremely compact and contains zero split municipalities. There is one VTD in Harnett county and one in Wayne county. Both were split to equalize population between the districts.

In an online public comment from Linda Devore submitted on September 22, she asked for Cumberland, Harnett, and Sampson counties to be kept together in a congressional district. By adding the population of Johnston and one precinct in Wayne county, this forms the ideal population for one compact district.

Congressional District 5. Congressional District 5 is based entirely in Wake county. It is made up of Garner, Knightdale, Raleigh, Rolesville, Wake Forest, Wendell, and Zebulon. Raleigh and the other municipalities in Wake county share common interests. Many people live and work and commute between the different cities and towns in Wake county. There are no split municipalities in this district, and any VTDs that are split are done for the purpose of maintaining municipal boundaries or equalizing population.

Congressional District 6. Congressional District 6 is made up of Durham county, Orange county, and the portion of Wake county that contains Apex, Cary, and Morrisville. This is a district that has

existed in one shape or form for decades. As the population has grown in the area, it has been concentrated more specifically in the Triangle. It is home to some of the state's most prominent universities and hospitals. Along with Charlotte, it is the preeminent urban population based in our state. There are no split municipalities in the district, and any split VTDs are located in Wake county and split to equalize population or to keep municipalities whole.

Congressional District 7 is made up of four whole counties and portions of five other counties that includes all of Alamance, Chatham, Lee, and Randolph, and parts of Davidson, Guilford, Harnett, and Wake. The district runs from the Triangle west through the central Piedmont region. It's made up of the smaller cities and towns as well as the rural areas that make up this area of the state. There's only one split municipality in the district as it contains a very small portion of Greensboro. VTDs are only split for the purpose of equalizing population or keeping cities together.

I'm going to pause for a minute to get a drink of water.

So we'll move on now to go Congressional District 8. Congressional District 8 is made up of eight whole counties: Anson, Hoke, Montgomery, Moore, Richmond, Scotland, Stanly, and Union, and part of another, Mecklenburg. The district takes in most of the counties considered to be in the Sandhills region. There are no split municipalities in the district, and one VTD is split in Mecklenburg county for the purposes of equalizing population.

In an online public comment submitted on September 30th, Maurice Holland Jr., chair of the Moore County Democrat Party, asked for Sandhills counties, including Moore, Scotland, and Hoke, be kept together in a Sandhills district. By adding in Anson, Montgomery, and Richmond, we believe this district will be rooted in the Sandhills and represent that region of our state well.

Congressional District 9 is a Charlotte district. Charlotte's population is too large for one congressional district so it must be

split. 97 percent of this district is made up of Charlotte, and 83 percent of the city is in the congressional district. VTDs are split only to equalize population and ensure that there are no other municipalities in the district.

Congressional District 10 is made up of three whole counties: Cabarrus, Davie, and Rowan, as well as parts of Iredell, Davidson, and Guilford. This district takes in the counties and suburban and exurban areas that stretch between the two population centers of Charlotte and the Triad. There's only one split municipality, as mentioned before, in Greensboro.

The district does contain all of High Point as Martha Schaeffer requested at the Forsyth public hearing that High Point be kept whole in one congressional district. VTDs are only split for the purpose of equalizing population.

Congressional District 11 is based in the northwestern corner of North Carolina and is made up of eight whole counties. Those whole counties are Alexander, Alleghany, Ashe, Caldwell, Stokes, Surry, Rockingham, and Wilkes.

The district also contains a portion of Guilford county and one precinct in Watauga county where the current incumbent lives. There is one split municipality, Greensboro, and more than 90 percent of Greensboro residents are kept together in this district.

Congressional District 12 is made up of four whole counties and one partial county. It contains all of Catawba, Forsyth, Lincoln, and Yadkin counties, plus a portion of Iredell county. It is a compact district that connects the suburbs outside Charlotte to the area in and around Winston-Salem. It splits no municipalities, and it splits -- and splits VTDs in Iredell county for the purpose of equalizing population.

Congressional District 13 is made up of seven whole counties: Burke, Cleveland, Gaston, McDowell, Rutherford, and Polk, and a portion of Mecklenburg county that contains the municipalities and towns to the west and north of Charlotte.

In an online public comment submitted on September 24th, Mary Elizabeth Voss asked the towns of north Mecklenburg, including Cornelius,

Huntersville, and Davidson not be split and kept together in a district. The only municipality split in this district is Charlotte because it must be, and VTDs are split only to equalize population.

Finally, Congressional District 14 is a western North Carolina district and takes in most of the mountain counties in the westernmost tip of North Carolina. It contains 14 whole counties, including Avery, Buncombe, Cherokee, Clay, Graham, Haywood, Henderson, Jackson, Macon, Madison, Mitchell, Swain, Transylvania, and Yancey. It splits one VTD in Watauga county to avoid double-bunking two incumbents. There are no municipalities split by the district. The district is a result of public input from CJ Breland at the Jackson County public hearing who asked that McDowell and Polk be removed from the current district and which is currently Congressional District 11 and that the district be drawn into Watauga county.

Going through our criteria, all 14 of the districts are drawn to zero deviation or to one person less than ideal. There's no point contiguity used in this map. The map divides 11

counties solely to equalize population. There are districts wholly within Mecklenburg and Wake counties which are the only two counties of sufficient size to contain a congressional district.

Racial data was not used in drawing of this map. VTDs were only split when necessary for balancing population or keeping municipalities whole. There are 24 total split VTDs in the map. All of the districts are compact. Only two municipalities are split in the entire state. This map was not drawn using partisan data, and member residence was considered. Community considerations were made to try to keep communities together, particularly in terms of cities and towns.

And, Mr. Chair, that is the presentation of the map.

CHAIRMAN HISE: Thank you, Senator Daniel.

Any questions or comments regarding the map? Senator Nickel.

SENATOR NICKEL: Yeah. I have a question and want to use a display here to try to explain it.

Here we've got -- what I see is what you started with which is a map of North Carolina as a 50/50 state. 50 percent Democrats, 50 percent Republicans. We voted for Donald Trump for president and Roy Cooper for governor. And we can start and draw the maps any way we want here with these circles. So I've got 14 rows, five red, five blue. And we could start and we could gerrymander for competition. We could make every single one of these a 50/50. It would look a little weird, but we could do it.

But what you've done here is pretty basic. You have drawn 6/4, and it's this great little pattern that I use where I do 6/4, 6/4, and then I do the same pattern again with my blue marker. So you've got six red circles, six, and four blue, so 60 percent Republican. And then we've got some Democrats left so we do another one here, 80 percent Democrat, 20 percent Republican. Same pattern again, 6 and 4, 60/40, again 60/40, again 60/40. And again, the blue marker for the rest with our district here, 80 percent Democrat, 20 percent Republican. Last one here, 6/4, again 6/4, and

again 6/4. And then we've got the blue marker again for this Democratic district. And then the last one -- we've got two more left here. You know, this is -- we'll call it 6 Republican, 4 Democrat, but I really think GK Butterfield's district is a lot closer than this, but just in fairness we'll call it 6/4, 6/4.

So that gives us 10 to 11 for the red circles and 3 to 4 for the blue circles. And that's what we've seen here. We're a 50/50 state.

We heard the public comment that gerrymandering is less popular than herpes, in Durham. That was one of my favorites. But, you know, I think it's important -- as we look at this, this is -- this is -- this is what this map is. It's a 10 to 11 -- or sorry -- a 10 to 4 or an 11 to 3 depending on that one area where GK is. And we've been through decades of litigation on this.

Ten years ago, David Lewis was the lead Republican author when we drew maps. He's now a convicted felon. At the time he said "I think electing Republicans is better than electing Democrats, so I drew this map to help foster

what I think is better for the country." He then said, "I propose that we draw the maps to give a partisan advantage to 10 Republicans and 3 Democrats because I don't believe it would be possible to draw an 11 to 2 map."

Now, Mr. Chairman, I know you are too smart to say something like that. And I'm not going to try to play gotcha here because I know you're briefed and you're not going to say something as bad as that, but I do recall on the floor, the last go around, when Senator Tillman was talking, I thought you were going to have a heart attack when he started talking about how Republicans were going to draw Republican maps, and he made his position very clear about that.

And, you know, it would be great if we could have an honest debate about this, but this is what we see here. And you don't need to say anything because this map speaks louder than words. You can't argue with the math, and it's right there in front of us. We've heard the public comments, we've heard the outside experts, and you can see in my diagram exactly what's going on. This is a map that robs 10.7 North Carolinians of any real choice at the

ballot box. It's a map that guarantees that 10 or 11 Republicans will be elected in our 50/50 state. It doesn't pass the eye test. It doesn't pass the smell test.

I wish I could make this committee understand why this is so wrong, why this is so wrong for every single voter in our state, and I wish we could sit down and have a private conversation about this with folks who would truly listen and truly find a compromise on this. And I wish we could have a competition at the ballot box for the best ideas, but you can't have a competition at the ballot box for the best ideas when you decide the outcome in advance. This is not a fair fight.

You know, we could do 50/50 districts in every part of the state. And I think the most important question is very simple. With this whole process, you know, in this committee and on the floor of the senate is how greedy are you going to be with these maps. If you pass an 11 to 3 or a 10 to 4 map, I think you can guarantee action by the State Supreme Court on state constitutional grounds. We have heard what they said the last go around, and we fixed

our maps.

We came back and drew an 8 to 5 map. Now you're taking seats to make an 11 to 3 map or a 10 to 4. Control of the next congress will be decided by just a few seats, and just by drawing the lines, we can decide who's going to be in control of the next congress. So this is a big deal for my constituents, for all of our folks.

And listen, I look at this like a father. When I talk to my kids, who are still probably sleeping from their Halloween candy hangover, and I explained it to my six-year-old daughter and my nine-year-old son, and there's only one way to describe it: It is cheating, plain and simple. You are cheating and robbing the voters of any real choice at the ballot box with this map.

And so I thank the committee for listening to me here. And I just have one question, Senator Daniel.

You just said you didn't consider partisan data at all. So how do you get a map that is an extreme partisan gerrymander that completely favors Republicans?

CHAIRMAN HISE: Senator Daniel -- and I will remind the committee, as with all committee process, questions are directed to the chair and the chair will direct those questions for an answer.

Senator Daniel.

CHAIRMAN DANIEL: Well, I think, Senator Nickel, you know, Senator Berger has probably said this best many times, you know, both on the senate floor and in public, that -- you know, the population of our state is such that Democrats have congregated themselves in urban areas, so really the only way to accomplish what you're suggesting is to gerrymander. And I would just reiterate that the Senate plan splits 11 counties, only 2 municipalities in the whole state out of probably over 400, I don't know the exact number, and it splits 24 VTDs. So I would just challenge -- I mean, I think those statistics are hard to beat.

CHAIRMAN HISE: Senator Perry.

Any other questions or comments regarding the map? Senator Marcus.

SENATOR MARCUS: Thank you, Mr. Chair.

When I look at this map, I see something really obviously problematic with it which is that you've targeted the three largest counties and split them each three ways. I'm wondering how -- first, Mr. Chair, how you ranked the criteria that this committee adopted and whether you took unnecessary splitting of counties into account. Because when I look at this, these counties are split more than they need to be, and I'm wondering why you did it that way.

CHAIRMAN HISE: To briefly respond to the first question, as you are well aware, there is no ranking of the criteria that was placed in -- the committee did not approve a ranking order of any of the criteria so one was not in place. And the map before you splits 11 counties in the state, the lowest of any map submitted.

SENATOR MARCUS: Follow-up.

CHAIRMAN HISE: You're recognized for a question.

SENATOR MARCUS: Thank you.

I understand that they weren't ranked. We asked for there to be some ranking for some

clarification, but I will just state that I think splitting these three counties three times is unnecessary and to me a clear indication of an intent to give one party a partisan advantage, but just to be a little more specific, I noticed that when the map was presented, there were mentions of citizen input to justify many of the districts. There was no mention of any citizen input to justify putting part of Mecklenburg county with what you call the Sandhills district.

I was at all the hearings. I reviewed many of the online public comments. I saw absolutely zero requests for part of Mecklenburg to be added to this more rural Sandhills district made up of Union, Anson, Richmond, Scotland, Hoke, et cetera.

I guess my question to the chair is are you aware of any input from folks in Mecklenburg requesting to be spread out so far to the east in these rural counties?

CHAIRMAN HISE: I'm not aware of specific input for many decisions made within the map, but thank you for your comments.

SENATOR MARCUS: Okay. Can I ask

another question.

CHAIRMAN HISE: You are recognized for another question.

SENATOR MARCUS: Thank you. Again, a similar question. I was at all the hearings, and I actually know the person that you mentioned to justify what you did to the northern and northwestern part of Mecklenburg county, which is to split the county again into a third piece and put us -- that's where I happen to live so I'll say us -- put us in this purple district that goes very far to the west also with a rural part of the state.

You mentioned Mary Elizabeth Voss. I know Liz Voss. She did ask that north Mecklenburg be kept together, but she never said please put us with a rural county to the west with people we have very little in common with to justify a congressional district perhaps for Speaker Moore. I know she didn't say that. What she wants is what we all want in Mecklenburg county, and I would say everyone in this state wants, is to stay with our communities of interest. North Mecklenburg towns live in Mecklenburg county and we deserve

to have a congressional district that honors that.

And so I'm asking if you would like to give any other reason, other than the one you mentioned about what Liz Voss said, because that's not -- that doesn't justify this. Is there any other way to justify putting a third part of Mecklenburg county in with yet another rural area district?

CHAIRMAN HISE: Senator, I will say that it is obvious that Charlotte and Mecklenburg county is too large for a district. And I'm sorry for your comments the people outside of that district don't want to be with anybody around them.

SENATOR MARCUS: That's not what I said.

CHAIRMAN HISE: Do you have another question?

SENATOR MARCUS: Not right now.

CHAIRMAN HISE: Okay. Any other questions or comments?

SENATOR BLUE: I do, Mr. Chair.

CHAIRMAN HISE: Senator Blue.

SENATOR BLUE: Thank you, Mr. Chairman.

I'm trying to get a handle on looking at what you've drawn, but Senator Daniel indicated that Raleigh and other municipalities in Wake county shared a common interest; is that correct? Question to Senator Daniel.

CHAIRMAN HISE: Senator Daniel, would you like to respond?

CHAIRMAN DANIEL: Senator Blue, can you --

CHAIRMAN HISE: Can you restate your question.

SENATOR BLUE: I'll be happy to.

You commented that --

CHAIRMAN DANIEL: Reference by a district number would be helpful.

SENATOR BLUE: Well, your comment was that Raleigh and other municipalities in Wake county shared a common interest, and I'm talking about -- let's see how many of them. Talking about District 5, District 6, and District 7. And --

CHAIRMAN HISE: I believe we're going to try to get a larger version up on the -- of where you're talking about in Wake county.

SENATOR BLUE: Okay. I think I got the

same map that I'm looking -- yeah. I'm talking about District 5, District 6, and District 7 on the map. It's S740 that was on my desk. I guess that's the same as the one you have up.

You had commented that citizens of Wake county -- Raleigh and the citizens of Wake county and the municipalities shared a common interest.

CHAIRMAN DANIEL: That's correct.

SENATOR BLUE: Yeah. Why don't the remaining municipalities in Wake county share a common interest?

CHAIRMAN DANIEL: I mean, they probably do, Senator Blue, but, you know, a congressional district can only be 700 and some thousand people, and you can't fit, you know, every municipality in Wake county into one district.

SENATOR BLUE: Yeah. Follow-up.

CHAIRMAN HISE: Follow-up.

SENATOR BLUE: I was just trying to sort out your justification for the whole district which you have no choice and you had to create one, and any one that you created was going to involve some of the municipalities in Wake county. There are 11 of them, by the way.

And so if in fact that is true, that the municipalities of Wake county, that is, the remaining 400,000 plus people, shared a common interest, was there any effort made to keep them together because they share a common interest with each other? Not necessarily with the whole district that you've created.

CHAIRMAN DANIEL: Senator Blue, my understanding is that the Congressional District 5 -- you said there's 11 municipalities in the county. Eight of those are entirely contained in Congressional District 5, and then the remaining three were placed in Congressional District 6.

So I think the answer is, without knowing the numbers off the top of my head, that, you know, we put as many as we could population-wise into one district and then the remaining three we put altogether in a separate district.

SENATOR BLUE: Another question. If I can call your attention to the map.

CHAIRMAN HISE: You are recognized.

SENATOR BLUE: Are you saying that none of the yellow portion in Wake county, at the

bottom of Wake county, there at the southwest 90-degree angle that comes together there at Wake county, are you saying none of those are in a municipality? Is Fuquay not down there?

CHAIRMAN DANIEL: I'm not sure. Apex, Cary, and Morrisville are in 6. And I'm not sure where -- Fuquay would make 12, then, because I've already counted 11.

SENATOR BLUE: Fuquay, Holly Springs.

CHAIRMAN DANIEL: So there's more than 11.

SENATOR BLUE: Okay. Got too many. We only got 11. Ten plus the county got --

CHAIRMAN DANIEL: The small ones, I didn't know.

SENATOR BLUE: Okay. Another question, Mr. Chairman.

CHAIRMAN HISE: Yes.

SENATOR BLUE: Was the same observation made about Guilford county, that -- Guilford county, the citizens of High Point and Greensboro share a common interest, is that correct, based on your reasoning of Wake county's municipalities and the city of Raleigh?

CHAIRMAN HISE: Senator Daniel.

CHAIRMAN DANIEL: I don't know what those folks would say. High Point's a furniture town and Greensboro is probably a textile town.

UNIDENTIFIED SPEAKER: Wait. I have to talk on that one. I have to talk on that one.

SENATOR BLUE: Let me ask him another question, if I could, Mr. Chairman.

CHAIRMAN HISE: You're recognized for another question.

SENATOR BLUE: What -- I grew up and took mandatory North Carolina geography in the eighth grade. It's been a while, but I remember a lot of it. What counties do you consider the Sandhill counties, and where do you consider the anchor of the Sandhills based on your eighth grade geography course?

CHAIRMAN DANIEL: I don't know that I can answer that question, Senator Blue.

SENATOR BLUE: If I could comment.

CHAIRMAN HISE: You are recognized for a comment.

SENATOR BLUE: Wasn't Cumberland county an essential county that you learned in the eighth grade was the anchor of the Sandhills?

CHAIRMAN DANIEL: I don't recall.

SENATOR BLUE: One other question in that regard.

Was Union county a Sandhills county based on how the Sandhills got their name in sort of prehistoric geography and the way the ocean deposited sand in that area of the state?

CHAIRMAN DANIEL: I just can't remember my eighth grade history, Senator Blue.

SENATOR BLUE: Okay. Let me ask one other one related to this and I'll move on.

CHAIRMAN DANIEL: I would say that -- I mean, I think sometimes we split hairs over, you know, communities of interest. I think, you know, we're all Americans, we're all North Carolinians, and I think we're sometimes making too much of a "I shouldn't be with the county next door to me because we're different." You know, I mean, we're all North Carolinians and we travel to shop in the same places with our next-door neighbor counties.

SENATOR BLUE: Let me ask you this, then, if I could, Mr. Chairman.

CHAIRMAN HISE: You are recognized.

SENATOR BLUE: You indicated that keeping municipalities whole was a priority.

CHAIRMAN DANIEL: It was.

SENATOR BLUE: High Point -- High Point is in four counties. Was it kept whole?

CHAIRMAN DANIEL: My understanding is High Point was kept whole, and the only two municipalities that were split were Greensboro and Charlotte.

CHAIRMAN HISE: Senator Blue, I will clarify that county line splitting municipalities is not a municipal split. It is -- as the system reads it, it would be a municipality within a county, whether that is split is how the system would determine. We also -- for clarification purposes, a split that was zero population is not a split.

CHAIRMAN DANIEL: So I'm not sure of the answer to -- if I answered your question right then or not, Senator Blue.

SENATOR BLUE: Make a comment, Mr. Chairman.

CHAIRMAN HISE: Recognized for a comment.

SENATOR BLUE: Yeah. I point that out because we go through great lengths to not say what is obvious, but the lawyers in here know

darn well -- and I don't know who the lawyers are, who is advising anybody, that -- now, there's not always direct evidence from the standpoint of somebody saying something is something. Circumstantial evidence is just as good as direct evidence to prove a point, prove intent and all of those kinds of things, and I think that what we fail to realize is that the kind of illustration that Senator Wiley just made, every mathematician in this state would agree that that's what the mathematics says. And at least I'm one who still believes in the science and in mathematics, and if the mathematics says it, I'm enough of an inherent to scientific proof and theory that I believe it's got to be so until you disprove it, and I haven't seen any proof, hypotheticals that would disprove that.

And so I'm saying that the proof of what is behind drawing this map is obvious to anybody who takes a serious look at it. And I am concerned that we went through this exercise two years ago and we came through it victorious. Not -- not that it was everybody got what they wanted, an 8/5 split is not a 50/50 split, but

the court blessed that split, and here we are two years later, just merely two years later spitting in their face saying that 8/5 is what we did because you made us do it, but we really wanted 11/3.

And that does not make commonsense to me. I'm a simple guy, and commonsense is what I try to use to determine what really ought to happen, informed by my basic belief in, you know, what I learned in Sunday school when I was five or six years old. And so I'm trying to figure out what is the commonsensical basis of taking 450,000 leftover people in Wake county, 450,000 leftover people in Mecklenburg county, and then all of the 500,000 people in Guilford county, treating them differently than you're treating every other county in the state. The magic running through these three counties is -- you are treating counties that still have 400 plus thousand people to contribute to the redistricting effort differently than you're treating every other county in the state.

And you pointed out that the Democratic concentration is in urban areas, and it's not coincidence that it's only in the urban areas

that you subject these counties to that kind of treatment. And I'm saying that commonsense would inform me if I were a judge, which I never had the desire to be, but it would inform me that you got something else at work here rather than the comments that you made about who wanted districts run in a certain way. And I'm really hoping that we can look seriously at redistricting this state in a way that does not offend the basic fairness of the process, offend people all across the state but -- so that you can retain some aspect of legislators playing a role in this process.

You know, I happen to believe in neutrals doing this because of the experiences I've had over the years, but this kind of radical, extreme effort simply takes us out of the process. And I think that you're as convinced as I am that it's not going to stand so why don't we fix it right while we have an opportunity to do it and not be governed by what interests outside of North Carolina tell us we ought to do in handling North Carolina business.

CHAIRMAN HISE: Thank you for your comments.

I next have Senator Perry and then Senator Lowe and then Senator Davis.

SENATOR PERRY: Thank you, Mr. Chairman.

I just want to share some comments and thoughts. And I heard my colleague mention commonsense approach. He also asked or mentioned he didn't know how many lawyers were involved, but I know how many lawyers are involved. In my opinion -- and no offense meant to my colleagues in the room, but I'll say it's too many, and entirely too many, too many attorneys up here that preplan every conversation that goes on in any committee we go to, especially this one. And it seems to have lost the flavor of the citizen lawmaker.

But I did have a question. I was looking at the visual aid that Senator Nickel provided and I was trying to figure out which one of those represented the congressional district that he's running for. And when I was looking at the map, it hit me. In these metropolitan areas, when the population's over 700,000, they're going to be split. They have to be. You got -- but not only do they have to

be split because of population, but those places are going to have three members of congress representing them. That's a lot more horsepower to advocate for things and bring things back for an area. And I probably see it that way because coming from a rural area where we lose population and districts get bigger, it feels like we always have less representation. So I look at that and I think there's no way not to do it, and it's actually beneficial to them to have additional members of congress advocating for that area.

Now, that's not a legal argument that lawyers are going to make. That's nothing salacious or interesting or headline grabbing for most, but it is the commonsense view of just an average non-lawyer citizen lawmaker. Thank you.

CHAIRMAN HISE: Senator Lowe.

SENATOR LOWE: Common citizen. I'm just a country preacher from a tobacco town, and when I look at this map, I gotta say it, and I see Winston-Salem, I see Greensboro, I see High Point. I think we have more in common than most on this map, and to split us up like this,

it's -- I can't make sense of it. And I really want to understand it because when I see Forsyth county swinging around and we're connecting to Lincoln, I mean, what in the hell do we have to do with Lincoln? It doesn't make sense to me. And I want to understand this, but I don't get it.

And I know that there's a lot of lawyers here, mathematicians and indian chiefs and all kinds of stuff here and people that are far smarter than me, but when I look at what has been going on in this community that I live in for the last 30 years as it relates to industry, as it relates to communities of interest and I see the blatant legislative process that pulls this apart. And you can do it, you got the votes. You've heard me say this before, but it just -- when I talk to the citizens in my community, I don't hear any of them jumping up and down about this, and I gotta say something.

Now, some of you I've talked to about all kinds of things, and some things we agree on and some things we don't agree on and then we go out and eat together, but when I look at this and when I look at Guilford and Forsyth, that is

a natural to be together, it's just a natural progression in the order of things. So I really want to understand the rationale for discombobulating -- maybe that's a good word -- this. Help me.

CHAIRMAN HISE: Senator Daniel, any comments?

CHAIRMAN DANIEL: I think, you know, we followed the criteria to the best we could, and we were able to only split 11 counties and 2 municipalities in the whole state.

CHAIRMAN HISE: Senator Davis.

Do you have any follow-up?

SENATOR LOWE: I meant -- you know, my brother's a lawyer.

CHAIRMAN HISE: Follow-up, Senator Lowe.

SENATOR LOWE: Follow-up.

My brother is a lawyer, and there are some conversations I've come to grips with that are useless to have with him, and it seems like we're getting to that point, but you can give me the real answer. I know there is one. I may not know it, but I know there is a real answer, and the answer you gave me is not it. Thank

you.

CHAIRMAN HISE: Thank you for your comment.

Senator Davis.

SENATOR DAVIS: Thank you so much, Mr. Chair.

And I guess in listening to all these comments, I'll start by just making sure everyone knows, I'm not an attorney either. I come from -- I'm a small town country boy.

But one thing that is important to me is the people, their voices in this process, and not just this process but in all processes. Everything that, you know, we engage in, whether it's the good, whether it's the bad, you know, the ugly, just taking the time to listen to the residents of the state.

So I want to first, actually, if I could change the tone just a second and thank you for making adjustments along the way because I know there was concerns -- I continue to hear concerns along the way about the public hearings, you know, making sure that there were enough before the map was released and then making certain there were -- there was an

opportunity to comment after, then the map was released. I know efforts were made then to do so.

Now, I continue to hear along the way, you know, there were still concerns about things like, you know, individuals wanting to comment, but when they went in, it was locked out and they couldn't get in and things like that. But I do appreciate those comments -- or at least what efforts were made even though, again, I continue to hear the desire for more.

But my question, then, is -- I was listening to Senator Daniel today, and I'm just curious. In this process, what was the total number of individuals that actually made comments and those that came in on the public portal?

CHAIRMAN HISE: Senator Davis, I'm not sure that anyone has that information, a tally in front of them at this point, but I'm confident staff can get you that report.

SENATOR DAVIS: Okay. Thank you, Mr. Chair. Follow-up.

CHAIRMAN HISE: Follow-up.

SENATOR DAVIS: Okay. Can -- I'm just

curious, because I know specific names. I guess some members know who they were. I don't know necessarily all the names that were mentioned in sharing the input that was made and considered in this map. Do we -- and I'm just curious to have kind of a total number that were used that went into this specific map that we pull from wherever the portal, from comments that were made because obviously I'm assuming you've reviewed it in order to incorporate some of those names.

CHAIRMAN HISE: So just from what I received from staff, it says the total online comments to date are 4,037.

SENATOR DAVIS: 4,037. Okay. And follow-up. Just going back to the question I had before that, and thank you for that.

How -- based on -- there were names that were shared today. Do we have any feel for how this map aligns with those comments, those over 4,037 plus?

CHAIRMAN DANIEL: I don't think we know any statistics about that.

CHAIRMAN HISE: I think that even whether those 4,000 comments relates directly to

the map is sometimes in question. Some -- more seem to be about the process or the others that are going. But do we have a tally of how many made an impression on the map drawers and others and was something they utilized, I don't know that that even exists.

SENATOR DAVIS: Okay. I was just curious. Thank you.

CHAIRMAN HISE: Okay. Thank you.

Is there anyone else who's not spoken yet who would like to be recognized? If not, I'll go back to the repeats.

Okay. Senator Nickel is recognized for a second time.

SENATOR NICKEL: Thank you. And I am a lawyer, and I'm proud to be one because I understand how our -- how our system of government works and how the court system works. And I think this map is begging for court action. And when the courts have gotten involved, we've seen much better outcomes that give voters a real choice at the ballot box.

My question, though, is about Section 10 of the North Carolina Constitution, and it states all elections shall be free.

Now, we had a unanimous ruling by a three-judge panel in 2019, and they said it is not the free will of the people that is fairly ascertained through extreme partisan gerrymandering, rather, it is the carefully crafted will of the map drawer that predominates.

So my question is in two parts. Number one, how do you define an extreme partisan gerrymander? And number two, is a map that elects 71 percent to 79 percent of members of one political party to the delegation of Washington an extreme partisan gerrymander?

CHAIRMAN HISE: Senator Nickel, I will immediately respond. I'm not going to give a definition for a term the court came up with coming in that the legislature did not, but I will say that a free election, there would be no different in a map orchestrated or designed to elect 7/7 individuals that -- if it doesn't have variance, it doesn't have variance that's with coming in in order to occur. And so I think the maps that I've seen elsewhere that we'll discuss later that are clearly drawn for partisan reasons that's coming in.

I will say that we have not looked at any partisan data in drawing this map, nor have we looked at racial data as consistent with the criteria of the committee, and the results are as they are.

SENATOR NICKEL: Follow-up.

CHAIRMAN HISE: Do you want to respond to the question or -- okay.

Senator Nickel is recognized.

SENATOR NICKEL: So getting rid of lawyer terms, is a map that elects 79 percent Republicans a fair map?

CHAIRMAN HISE: A map that predetermines the outcomes based on partisan data would be an issue that -- inconsistent with the criteria of this committee.

SENATOR NEWTON: Mr. Chairman.

CHAIRMAN HISE: Senator Newton.

SENATOR NEWTON: For the reasons articulated by Senator Daniel, I'd like to move for a favorable report on Senate Bill 740.

CHAIRMAN HISE: We have a motion for a favorable report. Last chance. Any comments from the committee?

SENATOR BLUE: Mr. Chairman.

CHAIRMAN HISE: Senator Blue.

SENATOR BLUE: How can you entertain a motion for a favorable report if you've adopted this bill and be fair to the other mapmakers who have bills that are before this committee on the same subject?

CHAIRMAN HISE: Senator Blue, as consistent with all the processes of the committee as I have been here, they consider one bill at a time. There is no limitations of what bills can receive a favorable or unfavorable report, and all bills from committee are referred to the floor with either a favorable or unfavorable report.

SENATOR BLUE: Follow-up.

CHAIRMAN HISE: Follow-up.

SENATOR BLUE: So you're telling me that this committee can pass out three bills on the very same subject, bills conflicting with each other?

CHAIRMAN HISE: The -- as I'm sure you're aware, the arbiter of law is the passage of both chambers, and what a particular chamber or both chambers, for that matter, can consider are not limited, and that has been consistent in

the 11 years that I've been here. I've discussed many bills with the House that we have had differences of opinion on the passage of the bills, and that's why we have a conference committee process as well.

SENATOR BLUE: Follow-up.

CHAIRMAN HISE: Follow-up.

SENATOR BLUE: There is no conference committee process in the Senate with competing bills unless I missed something, right? So once we've passed something out of a committee, that is the official position of the committee. And what I'm asking is how can we then conflict it -- or how can we then consider anything else unless it's an amendment to the bill that we're discussing?

CHAIRMAN HISE: So, Senator Blue, there is no process for the committee to consider two things simultaneously. That is not in our process.

Any other questions or comments?

Seeing none, Senator Newton has moved for a --

SENATOR MARCUS: Mr. Chair.

CHAIRMAN HISE: Senator Marcus.

SENATOR MARCUS: One -- a question, please.

CHAIRMAN HISE: You're recognized for a question.

SENATOR MARCUS: One topic we haven't talked is the application of the Voting Rights Act to this map. I asked, when we met earlier, that this committee, before we even set county clusters, and certainly before we vote on a map, that we do a racial polarized voting study. At that time, the chair informed me that there was no intention to do that, at least at that time.

I'd like to ask whether that research has been done and in any way is reflected in this map that we're about to vote on.

CHAIRMAN HISE: No studies have been done by this committee, no evidence of racially polarized voting has been submitted to this committee for consideration, and racial data was not used in the creation of these maps.

Seeing no other comments, Senator Newton has moved for a favorable report, Senate Bill 740. All those in favor please signify by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HISE: Opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HISE: The ayes have it. Senate Bill 740 received favorable report and will be referred to the floor.

Next bill we have up on the calendar, Senate Bill 737, Congressional Redistricting Plan 2021, CCH-6. Senator Clark.

And the packets are being distributed. We did hold those to avoid confusion so that members can have one packet in front of them.

Senator Clark, is it your intent to amend it before discussion?

SENATOR CLARK: [Unintelligible].

CHAIRMAN HISE: Okay. So not at the beginning.

Staff will now begin -- at the senator's request -- at Senator Clark's request, we will pass out copies of the amendment as well. We will consider the bill as is until the amendment is submitted.

Members, as I am reading what is before me, the bill we are considering right now, the map is labeled Senate Bill 738 1st Edition. What is being passed out at this point I'm

understanding will be the proposed amendment from Senator Clark which is labeled as -- the map is labeled as CCG-7. The bill text is attached to both maps.

Seems that everyone -- does everyone have a copy, every member of the committee have a copy of both? Yes. Okay.

Recognizing that, Senator Clark is recognized for his explanation.

SENATOR CLARK: Thank you, Mr. Chair.

CHAIRMAN HISE: And this is -- hold on. I have --

UNIDENTIFIED SPEAKER: Mr. Chair -- [unintelligible] the next bill.

CHAIRMAN HISE: So we'll hold again while we pass out the bill.

738 is Senator Chaudhuri's bill that's coming in. What you will need is 737 1st Edition. That's 738 again. Sorry, Senator Clark.

SENATOR CLARK: No problem. We're not going anywhere.

CHAIRMAN HISE: Again, does everyone have in front of them Senate Bill 737 1st Edition as the map is labeled? Okay.

We -- if everyone has it, we will go ahead and allow Senator Clark to begin his process.

SENATOR CLARK: Thank you, Mr. Chair.

Okay. The bill under consideration has the Plan CCH-6, and I'm going to recommend that we amend that with another plan, but I did not want you to think I'm trying to hoodwink you or anything so I want to explain how the maps differ.

So if you look at the one on the screen or in your hand, we'll start with CCH-6. If you look in the western part of the state -- I guess I shouldn't move away from the microphone.

If you look in the western part of the state, you'll see a configuration for that most western district which I refer to as a tight pack, okay, and you can understand why we'll call it that.

Now, in the bill submitted by the chairs, they use what I call a western slant which is shown there. So what I decided to do is take that western slant -- excuse me -- and included in the bill that I will be putting forth as an amendment. Okay. And one of the reasons I did that was because at the public

hearings, one of the individuals speaking lamented the fact that Watauga was not included in the traditional Congressional District 11, so I decided I would make that change by incorporating the majority's plan with regard to that particular district into mine. Okay.

Another change that is made, I would like to direct your attention to Wake county. And you can see the configuration of Wake county that I had there initially. Well, what I decided to do is modify that. As you see here, it goes further to the south, that particular district that is embedded wholly within Wake county. Essentially what I've done is I've gone to Senator Chaudhuri's bill and I snatched his version of Wake county from him and incorporated it into this plan.

And one other minor change that's not necessarily visible in this particular map here is I changed the boundary just a little bit that separates the east from the west by saving a split VTD; in other words, I reduced the split VTDs by one.

And so that being said, Mr. Chairman, I would like to amend the bill with the plan that

has CCG-7.

CHAIRMAN HISE: Senator Clark, as a request that has come to the chairman, as we have not seen this until now, I think it is appropriate before we -- we'll consider the amendment as proposed before the committee, but before we begin discussions and vote on the amendment, we're going to let the committee stand in recess for about we'll say 20 minutes to review this map, allow us to continue, as many of the members of the committee are seeing this for the first time now.

So we'll pick that up in just a moment and the committee will stand in recess until, let's see, 10:25. So we're in recess.

[In Recess.]

(Transcription from YouTube ended at 1:35:33 and started again at 1:57:30.)

CHAIRMAN HISE: The committee will come back to order.

Where we left out, we had a motion on the floor to amend the bill in whole with CCG-7, the packet that you have.

The chairs have decided for their consideration that they would support the

amendment of the bill on the basis that Senator Clark can submit a bill to be considered by the committee but would do so as to without comment as to whether the amendment is more consistent with our criteria or others as Senator Clark could have just submitted this as his bill.

So I'll go ahead and take all those in favor of the amendment please signify by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HISE: Opposed, no.

The ayes have it. The bill as amended CCG-7 is before the committee.

SENATOR CLARK: Thank you, Mr. Chair.

CHAIRMAN HISE: Thank you.

SENATOR CLARK: Okay. That being said -- let's see. We're now on CCG-7. That is the map that is under consideration before the committee here.

And one thing you think about when you're doing a map is what are my objectives and are there things that I'm trying to make sure that don't perpetuate themselves, are there things that I want to include in the map going

forward. And I want to talk about those things because one of the things that was mentioned by one of the members -- not members -- by one of the individuals who came to the last public hearing, she said, "There's no context here. I don't understand where this map came from or why y'all made the map the way you did."

So for me, the best thing to do, I believe, is to first start from our current congressional maps because there are things in that map that I thought were egregious that I did not want to continue on into the map that is before you now. All right. So that will just take a couple of seconds.

So first of all, this is our current congressional plan. And if you look at it, you see in the center near Mecklenburg county, there is a circle there. From the center of Mecklenburg county out to that circle is the distance of about 20 miles. Within that tight radius there, we have four congressional representatives there. Also, you see some black dashed lines that end in balls that extend far out into North Carolina. And if you follow the trajectory of those dashed lines back into that

circle, you see we have one, two, three, four, five congressional districts that terminate far ends of the state that also have points of contiguity within Mecklenburg county. And to me, something's wrong with that.

And also if you do the counting and count the number of districts that are rooted in the west versus in the east based on population, you'll see that we have eight -- excuse me -- I believe it's seven in the west and only five in the east -- or 8/5, excuse me, and I think something's wrong with that.

I think the common person out there would think, well, we ought to have a balance there, but we don't have that. And so one of the things I wanted to do moving forward in the plan that I have before you today is make sure that in the east and west we have seven districts in each based on a split of the population.

And so that brings us to this diagram here. The area in the green represents the west; the area in pink represents the east. And as you can see, the actual populations are quite similar. As a matter of fact, the deviation

between the two -- there's a minus one/plus one deviation on having equal populations in the west and equal populations in the east.

And as you'll see in the 7/7 plan, as I've been calling it, there will be seven districts in the west, seven districts in the east. No district in the west shall cross over to the east, and no district in the east shall cross over to the west. I know that was not a criteria of the committee, but it was a self-imposed criteria that I placed upon myself because -- by the way, in case you're wondering, I do comply with all of the committee criteria.

But the thing I understand, and I suspect most folks understand, is that in addition to the criteria that we guide ourselves by as a committee, we also have other objectives when we sit down and do a plan, whether it's a legislative plan, congressional plan. And our folks who have come to the hearings and our folks back home, they want transparency. They want to understand why it is that we did what we did. And I'm going to try my best to explain why I did what I did.

And in part of what I did is because of

the constraint I imposed upon myself to bring about an issue of fairness I believe most citizens in North Carolina would agree to. If we split the population in half, we ought to have seven congressional districts in the east and seven in the west.

And in addition to that, I believe that every major geocultural region in the state of North Carolina should have a congressional district rooted within.

This particular diagram is a three-dimensional diagram that shows -- gives a feeling for the population densities in the various major geographical regions across North Carolina. I've circled them in either black or I've circled them, one, in red. If we start in the west, we see that the western region of the state has a congressional district rooted therein. The northwest does, the Triad does, the Charlotte metropolitan region, greater metropolitan region has one. Actually, they have about three or four. I lose count. And then you have the Triangle up there; it does. The northeast, the coast, and the southeast. But who's missing one? The Sandhills.

And by the way, before I forget, our friends across the aisle mentioned that Maurice Holland indicated in his written comments that he wanted a Sandhills district. Yes, indeed, he does. As a matter of fact, I know Maurice. He's the chair of the Democratic Party in Moore county, and he showed up for our last public hearing and specifically endorsed CBK-4 which contained the construct and the plan that I'm presenting to you today as his preferred choice for a Sandhills district.

So that was another one of the self-imposed constraints or objectives I had with regard to a map.

Okay. To summarize, I have my points here. In addition to our criteria and my objective for a congressional plan for North Carolina to have equal representation in the east and west, to have districts that are rooted in each major geocultural region in the state -- and I can't read from here, but I know it says another thing is to not split any county more than one time, which is what we did in our previous congressional plan. We did not split a single county more than once. As a matter of

fact, I made that as a recommendation for the committee, but it was rejected, but the reason I did that, because I've been reviewing a lot of maps over the past year. You know, I have a lot of enthusiasts out there doing their own maps and people really like doing maps.

But one thing that started to become apparent to me is that the gateway to gerrymandering is to go in and split a municipality more than one time. So I was not shocked, I fully expected it, when I saw the map that was produced by the folks across the aisle when I saw three of the large urban counties -- was three -- well, two splits which made three pieces, and I said, okay, they're exercising that gateway to gerrymandering. And I know what they say about the number of splits, but we'll talk more about that later. I don't want to get off track here. Okay. So in my case, I did not split any county more than once.

Okay. So that being said, clearly, I am influenced by other things. Like I said, I've seen a lot of maps, but probably the three most important maps that I took into consideration as I embarked on the effort to do

a congressional plan for the state of North Carolina are the three that we'll go over now.

The first being the North Carolina prosperity zones. If you look up there, you see the state of North Carolina. As a matter of fact, this was done early in the McCrory administration when these zones were established. We have a western region, and surprisingly, or not surprisingly, that looks like a tight pack construction for a western district in the state of North Carolina. And then you see the northeastern region up there, probably looks similar to many of us. Then you have the Triad region, the north central region, the northeast region, southeastern, and you have the Sandhills. Now, clearly, all of those counties you see there are not going to fit in Sandhills. Senator Blue already gave us a geography lesson on the ones that make up essentially the central core of the Sandhills regions which are the ones that were adopted in the plan that I'm going to use.

But also I would like to draw your attention to over in the Charlotte metropolitan

statistical area, you see that gray mass over there. Another one of my objectives was to try to constrain districts to that area to the greatest extent possible because clearly, they have interests in common in that area.

So another map. This is another map generated by the State of North Carolina Department of Health and Human Services for Public Health Preparedness and Response.

If you look on the western side, you see something similar. You see a grouping of counties along the western border, and you also see that configuration in the Charlotte metropolitan area. I think one difference is the Catawba has been added. So I used that to guide my approach as well.

Third map, North Carolina Appalachian Regional Commission Counties. I think there you have about 29 counties that are part of that commission. As a matter of fact, every single one of those counties, say one, except Davie, form what you might call a two congressional district cluster which hold the two western districts that are in the plan that I put forward. I don't think anyone would doubt that

there's a lot of communities of interest within that group.

Okay. So that being said, that brings us back to the CCG-7 plan. Okay. And I included the white line in there which represents the boundary between the east and the west.

So when you're looking at that blank slate of North Carolina, it's like, well, where do I start? Where do I start? Unlike I guess about four bienniums ago when I sat down in the basement of one of the buildings here with one of the staffers with Maptitude and told her I wanted to practice trying to figure out how to do a congressional plan and she asked me where I wanted to start, and I looked at it and I didn't have a clue, but I had a clue this time, I had a clue this time. And you have to sort of think, well, what do the citizens of North Carolina want? What do they want?

Well, first of all, they want us to fully comply with the criteria which in part says if you have a county that has substantial population in which a complete congressional district can be embedded, we must do that. So,

okay, well, I guess I'd better go ahead and take care of Mecklenburg county and Wake county.

So under our current congressional district plan, we've resolved that by essentially pushing the population up against the northern border in Wake -- I mean, Mecklenburg county and taken the balance from the south and pushing that into another district. So I chose to do that in this plan, and I tried, to the extent possible, to the best of my abilities, anyway, to avoid splitting municipalities in that process.

So then I head on over to Wake county. Now, in our current congressional plan, the opposite is done. The population is pushed down to the south, and it's the northern portion of Wake county that serves as an outlet into other districts. I chose not to take that route. I chose instead to push it up to the north and make the outlet the southern portion. So you might ask, well, why did he do that?

Oh, boy, let me back up here. Can someone help me out, one of the technology people, put it back in the proper mode. Okay. I hit the wrong -- you may want to stay there

until I get going again. I think I hit the wrong button on here. Try to back up and see. Okay, that does it. Okay.

Okay. So one thing I knew that was going to happen is if you look in the district labeled 7, we have that boundary constraint there. I knew I was going to have to come across the top and initially connect the first three counties and try to build up to the required population, but I did a full stop at Granville county. So why did I do a full stop at Granville county? Because that's going to serve as the basis for what we consider now to be a VRA district, currently numbered Congressional District 1, congressional -- Congressman Butterfield's district. And I'll talk more about that later, but I just wanted you to know why I did that full stop. Okay. I was going to do that full stop, but -- so I'll come back to that later.

So let's move back to the west. So we have Mecklenburg county taken care of, and I want to take care of another area out west. I think you may appreciate this, Senator Lowe. A lot of folks at those public hearings said that

they wanted to keep Congressional District 6, as we currently call it, pretty much intact. And as a matter of fact, the first iteration of the map that I did did exactly that, and it pretty much looked like the one we had today. I just expanded it a little bit in order to make sure it got up to the ideal population.

But then during the public hearings, one of the speakers indicated that Kernersville should be part of Congressional District 6 and they shouldn't be connected to the west. So I said, well, I guess I better go in and make that fix. And also while I was at it, I decided to fix Walkertown, too, and make it part of that district. And as a result, it became somewhat more compact, and it also helped me eliminate two municipal districts. I began to realize that that was a premium criteria for some around here. So I eliminated two split municipalities, and I tightened it up, gave it a much cleaner appearance and retained it as the folks in that region had asked that we do through the portal and through public comment and hearings.

So now in the west I have Mecklenburg taken care of and I have congressional

District 6, now 12, taken care of.

So where do I go from there? I said, well, okay, let me go ahead and take care of the western part of the state. And as you know now, I started out with a tight pack configuration, but I thought Senator Hise and Daniel's version was better so I adopted the western slant variation, which you see here, which necessitated a change to District 14 up there.

Okay. So now in this version, it runs all the way from Polk county up to -- I can't see my glasses -- without my glasses. -- up to Stokes county. But remember, those group of counties in those most western districts are the same counties that are in that ARC commission, say one, that being Davie county.

So then I said, okay, I got that squared away. Maybe it's time to move east from Mecklenburg county. Now, remember, we're going to be constrained by that east-west boundary because we want to make sure we have seven districts in the west and seven in the east. So I begin heading out and I go from Mecklenburg county to Union, then Anson, and it's time for a full stop. Then I run up and I capture a little

bit there -- let's see -- Richmond, then Montgomery and back to Stanly where I still don't have enough population, and then I group in some of the southern portion of Cabarrus county, and that provides a congressional district that lies pretty much almost completely encased with that eastern portion of Charlotte -- greater Charlotte metropolitan statistical area that we talked about previously.

Okay. Then from there you can move northward to the next one. I take the rest of Cabarrus county and I group that with Rowan, Davie, and then head on out to the west until I get to -- let's see, what do we got over there -- Randolph and that forms another district. Remember, it couldn't go any further because we have Congressional 6 already has taken that territory up northward. Yet in whole for the most part, it too is encased within that greater Charlotte metropolitan statistical area in the region that we saw in the previous maps that impact the way I was going to approach this process.

So if we go to the eastern side, we see

that we have another component of that which includes the counties you see there: Iredell, Catawba, Lincoln, Gaston, and Cleveland.

And I haven't mentioned it before, but since it's on my mind -- and by the way, this map doesn't double-bunk a single incumbent, so all the ones that are out there, they can feel safe. No double-bunking of a single incumbent in this plan.

But then that pretty much takes care of the west. I've achieved half of my objectives so far. We have seven districts in the west. All of them are compact within major geographical regions in the state. All of them are consistent with regions that we have established before within the state, whether it be the economic regions, whether it be part of the ARC, et cetera. There's method to the madness, if you want to call it madness.

So let's head back to these. I'll start up this seven. As I indicated before, I had to come across the top there, pulled in the first three counties and hit the full stop at Granville. So then I had to go grab the three counties beneath. And then when I got to

Durham, of course, it was like population overload, so I'm going to have to reduce some of the population, and I decided to take that out of Durham. So I took that southeastern corner out of Durham and said, well, that will be part of the district that would lie beneath it, okay, which also somewhat adjoins southern Wake county.

But remember, full transparency. I also told you that one of my objectives was going to be to establish a congressional district that was rooted in the only region that does not have one at this point and that was the Sandhills. Yes, citizens did ask for this. As a matter of fact, for those of you who were at the Cumberland county public hearing, 40 percent of the people that spoke requested a Sandhills district that contained these counties. And among the people there were some people from Moore county. There were also people from Robeson county. As a matter of fact, when I went to the public hearing in Robeson county, about 30 percent of those people spoke in favor of a Sandhills district comprising these counties. And Maurice Holland was one of the

people that said they like this version.

But it's more than about the Sandhills, you know. This region is home to a major influence in this state that we call Fort Bragg. I know one of my fellow members, a good senator, linked a community of interest, if you will, with Fort Bragg regarding some three other counties. But let me tell you something, probably unbeknownst to many folks that when they think of Fort Bragg, they just think of the installation itself, but the majority of the Fort Bragg training area lies within the northern portion of Hoke county, spans across the entire tier of Hoke county. And also, in that confluence of counties down there, where you have Moore county, you have Hoke county, you have Scotland county and Richmond county, and in that little knob we have a place called Fort Mackall military installation somewhat linked to Fort Bragg where they train special forces troops, has an impact on them all.

If you run down the southern border of Moore county there, the lower third or lower quarter, if you will, that whole area has been designated in their land use plan as a military

impact area. So when I came into that, I had those things in mind. So, of course, took Richmond. We grabbed what I considered the belt of Sandhills down there. Then we took -- added Robeson county and then Moore county in there, but that still wasn't enough population. So the question becomes, well, do I head over to Bladen county or maybe Sampson county or maybe up to Harnett county. I decided to go up to Harnett county, and I'll explain why, but before I do that, I want to mention something else.

In my initial version of the CBK-4, inadvertently, I guess I had gone up too high and I took a precinct that inadvertently split Lillington in half, and one of the speakers at the last public hearing lamented that she did not appreciate someone putting a map out there that split Lillington that way. So I wasn't sure that I was the one who did that, but I went back and looked at my map and lo and behold, ouch, it was me. So I said, well, let me take that precinct and put it up there in the 6 and take it out of 4.

Now, I didn't have any political data, didn't need any, been looking at these maps a

long time, but I do know that that precinct I popped up to 4 and out of the Sandhills is a Democratic-leaning VTD. I just know that. I suspect you guys in your areas know how various precincts trend; you just know. It's in your area; you just know. And therefore it ended up getting swapped out for a precinct that was more Republican leaning got added into the Sandhills, but that's okay, that's okay. Because my interest is not trying to establish a map that leans Republican or leans Democrat. My total objective, from beginning to end, was to try to develop a map that was fair, fair in the east-west distribution, fair in the distribution of seats into the major geopolitical regions.

Sandhills, I don't know whether that -- if somebody asked me is that going to be a Republican or Democratic district, I don't know, I don't know, but you know what, if it's a Republican or whether it's a Democrat, it will be a Democrat or Republican of the Sandhills and not of Charlotte or Cabarrus county. The people in the Sandhills are tired of being split as population fodder for other districts, so that is why that was done.

So now having -- also, forgot to mention, we also have communities of interest with Harnett county. As you're leaving Spring Lake on to 11 heading into Harnett county, you'll see a large presence of military families. As a matter of fact, they even have military housing up there in that area, a lot of military movement to the houses up there and the businesses cater to veterans, active duty, and retirees, so there is a significant community of interest attached to Harnett county as well.

So now having established that 7 and that 4 as numbered there, essentially I have the makings for 6, but there's not sufficient population. So, of course, there's only one other place to go at this time and it's under Johnston county. So I move east and grab sufficient population to build out the district.

Now, in one of my earlier versions of the map, I had Johnston county connected to the coastal district, and I had Onslow county split with a portion being with the coastal and a portion with the southeast. Some folks didn't necessarily like that. One commented that Onslow county should be kept whole because of

the military presence there that essentially permeated the entire environment of the county, so I honored that and I made Onslow county whole and kept it up in the east. And then some prefer the Johnston county, if it's going to be connected to another region, that stay as it was, which was the southeast region, so I did that. Had to make adjustments to Wayne county in order to rebalance the population, and then you have 3 and 1 as you see on there.

Okay. So I guess that leaves only one other district to talk about, and that's that Voting Rights Act district. And early on we asked our members to say, well, we're going to need to use racial data in order to make sure that we comply with VRA with regarding to the districts we draw, and they didn't want to do that, and that's their prerogative. So since I couldn't use racial data as my guide, I relied on a 2011 drawing generated by this body, the Senate, that has the VRA requirements for the Senate districts that were being contemplated at the time. And essentially what they did is they identified areas that were considered to have significant racial polarization when it came to

voting.

So I said, well, if I keep most of the counties reflected in this document produced by the North Carolina Senate in 2011 and I try to keep most of the counties that were in our current plan, I probably have a chance of, hopefully, making sure I comply with VRA requirements with regard to maintaining that district, so that's what I did. Remember, I said I constrained it to Granville county and we have what we have.

Now, we've heard some talk about different types of data that come into play here. Oops, back up. Erika, I've done it again.

Yeah, the backup kicks me out for whatever reason if I go too far. Don't go anywhere. Okay. Where's forward. Get me forward to the next -- I think I keep hitting something wrong. The next one. Okay. Okay.

Okay. So we've talked about the splits before. There are splits and then there are splits. In this plan I have before you, 13 counties are split. And in the Republican plan that was presented to us, 11 counties are split.

The reason that is is because in that plan they chose to split counties more than one time. And as I indicated to -- sorry.

The reason they did that was because they chose to split counties more than one time which I chose not to do deliberately because in my most humble opinion, when a split counties more than one time, that is a clear indication of an intent to gerrymander. But one thing also that was not mentioned is that that also results in a different number of county splits. So in the plan before you now -- I mean, the number of times a county was split. Before you now, counties were split only 13 times whereas in the other plan, because of all this double splitting, counties were split a total of 14 times, for what that's worth, just to bring a little bit of transparency to that situation.

We talked about municipal splits. Okay. Total number of splits in the plan I have is 41. Total number in the plan presented by my friends across the aisle is 13. Now, altogether we have 553 municipalities in the State of North Carolina, but as Senator Hise informed us, all splits are not the same. There's the kind

of split, I call it a phantom split. I think Senator Hise called in a zero split, so really, they don't count because what happens it's split -- one side is split doesn't have any population in it so it doesn't matter.

Then also Senator Hise mentioned about what I call the cross county splits, when you have a municipality that goes across the counties and therefore is split by virtue of the fact that you don't necessarily combine those counties, had 19 of those, and by my count they had 20, about the same.

Now, the big difference here is in the intra county splits. Clearly, my friends made a very concerted effort not to split those types of municipalities, and they only had two. I think they were in the major cities like Charlotte, if I recall correctly, and one other county they mentioned.

Now, of course, each of those splits will have -- be associated with different populations. And of the 13 of mine, the majority of the three came from the same two as they have here as well as in Pitt county was split into Greenville. Now, the reason I didn't

split Greenville is because I felt I did not want to move too far away from the precedent that had been established in the setting of the VRA district in Congressional District 1 up there. As I look back on all the maps, there's a split there, and I assume it's there for a purpose. Yeah. And I can remember a former senator that was here when I first arrived, he said if you walk up to a fence post and it's tied together with bailing wire, you better think twice before you remove that wire: Senator Nesbitt. So I figured I probably should leave well enough alone and not do too much of messing around in Pitt county.

And also VTD splits, we talked about that briefly. In the plan before you, there are 14 VTD splits, one in most counties that have them and two in one, happens to be Iredell county. If I had had time, I could probably go back and fix that, but right now they'll do.

And in the plan presented by our Republican friends across the aisle there, they only have -- they have 24, and I expect the number's a little bit higher probably due to their efforts to avoid splitting municipalities,

so like you have to pick your poison, split more municipalities or split more VTDs. Sometimes you just have to pick the poison. Depends on what sort of priority you establish. But, of course, we didn't establish any priorities in the committee here. What we did is we said we were going to harmonize. My good friend the chairman said we're going to harmonize the criteria.

Well, folks, hopefully I've harmonized well enough and hopefully you'll consider this bill for adoption. Any questions?

CHAIRMAN HISE: Thank you, Senator Clark.

Any questions, comments. Senator Blue.

SENATOR BLUE: I do have a question of Senator Colonel Clark.

Since you mentioned the military, it might be that -- and you do because you live in it, but as you created the Sandhills district, it might be that folk don't fully understand or appreciate the impact that the military presence at Fort Bragg has in all of those counties, particularly Robeson county, and the residents in Robeson county who go to Fort Bragg every

morning, but as importantly, the civilian workforce that that base, the biggest in the country and I think probably one of the biggest in the world, how it pulls on that whole region and ties together the whole region. And as well as Harnett county because even though it's adjacent to Wake county, sandwiched between Cumberland and Wake county, a significant portion of its population and its housing pattern and industry is predicated on what's happening at Fort Bragg.

And I'm wondering in addition to the things that you pointed out, since you know, you work on the base and you do analysis, since you know the different impacts that that 50, 60,000 troop base has in that area, are there other things that sort of factored into your decision that may have been related to Fort Bragg or Pope Airfield, now they call it rather than Pope Air Force base, that sort of informed you as to how this was probably the greatest community of interest in the whole state that hadn't been recognized.

SENATOR CLARK: That's true, Senator Blue. And you mentioned Harnett county

so we'll start there.

Right on the northern border of Cumberland county, right north of the installation, if you go stand out there until 11:00 in the morning to watch the folks come into that post, the cars will just come, they keep coming and coming and coming. You don't see much traffic going in the other direction in the morning, but you go stand at that same spot in the afternoon, when the folks get off from work, and you just see the cars rolling out, out, out and out.

And a similar thing in Hoke county. As a matter of fact, in Hoke county, about 30, 35 percent of the folks in Hoke county travel over to Cumberland county for work. That's the largest percentage of members in a given county traveling to another county for work in the state, and most of that is tied to the economic driver in the region known as Fort Bragg.

Senator Blue talked about Robeson county where he is from; you have the same thing coming up 95. As a matter of fact, one of my co-workers retired about a couple years ago came all the way from Fairmont down in Robeson

county. And he wasn't alone. You have a lot of folks from Robeson county coming up to Cumberland county to work.

And like I already talked about Camp Mackall, same thing in Southern Pines, lower portion -- I mean, Moore county. They have communities that formally establish their connection to the post. You can go to their websites. They're military veteran friendly. So that really is a giant region that represents one giant ball of common interest.

And additionally, even things not related to that. There's a cultural dimension too. I don't have the racial data or political data, whatever. Just common knowledge of the geography of the state, as Senator Blue indicated, but four of those counties that form the belt of that region are majority-minority counties. And of course, they wonder why it is that they keep getting split like that.

And in this plan before us here, that -- it is just completely intolerable. Not the one before us here. The one that was presented. From that region, it splits off Hoke county in one direction. It takes Hoke county,

Scotland in another direction and Robeson county in a whole other direction, a three-part split. No one, absolutely no one in that region supports that notion.

. And as I indicated before, if you were there present at the Cumberland county hearing, and even if you weren't present and you want the transcript -- I've had my LA produce a written transcript for you so you can read what the 20 people who spoke plus -- 20 plus people spoke at that hearing had to say. Even the chairman -- former chairman of the Republican Party in Cumberland county spoke in favor of that construct that we have here. She said she had been there for -- I forgot how many years -- and seen I don't know how many different configurations of congressional districts coming down into the Sandhills. And it's a shame, it's a shame.

Had a retired army general, General Anderson who spoke, spoke to the commonality of the community of interest related to military interests there, Senator Blue. Had folks from Robeson county -- I mean, Hoke county who came over in favor of that construct that is

in this map here. They're tired of being sliced, diced and split up. They believe they deserve the same as every other major geocultural region in the state, and I just happen to agree with them.

CHAIRMAN HISE: Senator Blue.

SENATOR BLUE: One last --

CHAIRMAN HISE: Then I have Senator Newton and Senator Nickel.

SENATOR BLUE: One last comment that I would point out to Colonel Clark is that there was an interesting article in the local news this weekend, and it may have been in either yesterday or today's newspaper, about a powwow that occurred at the new Dix Park here, and it involved the eight recognized Native American tribes in North Carolina.

And in that cluster of counties that you have in the Sandhills, and I know it because I lived there and grew up with it, but in those four counties, Robeson, Cumberland, Hoke, and Scotland, are contained probably 90 percent of the Lumbee Tribe that still live in North Carolina, a good number here and in Charlotte, the remainder, Mecklenburg and Wake

the remainder. And they constitute the biggest Native American or indigenous tribe east of the Mississippi River. And then you look at the other tribes, and all of them are, you know, cultural preservation and those kinds of issues that are important to people who live there and people who study them and people who understand what cultural connections really mean, and they've been talking about it lately.

And that would be a further reason to seriously look at a congressional district because the biggest challenge to them now is not only recognition but status. It is a tribe that got recognized in 1957 as an Indian or Native American tribe, but they don't have status like the other recognized Indian tribes in Oklahoma or the Cherokee or various others. So that's been in the debate a long time.

And so there are many other reasons, but I just wanted to commend you on basically popping the ball up in the air to discuss the lack of an organizing cluster in those counties as the other sections of the state have, especially with respect to the Sandhills district, but also on -- showing that you can

draw a VRA district simply by knowing what VRA means and what the historical nature of those black belt counties along the top of North Carolina is and the history associated with it and how that is a way that North Carolina got into discussion about the Voting Rights Act in the first place. So recognizing that you can draw that district at a way that is valid without having the specifics of the population in a precinct or the population in a VRA, but simply knowing those counties and knowing what the population is going to add up to. So if you know how to use them to create the population necessary, you certainly know how to use them to destroy the population necessary for the preservation of a VRA district.

CHAIRMAN HISE: Senator Newton.

Thank you for your comment.

SENATOR NEWTON: Thank you, Mr. Chairman. Just a couple of questions, if I could, for Senator Clark.

Senator Clark, in your explanation of your map, you talked about objectives and you used -- you talked about VRA district, you

talked a little bit about a fair number of seats being an objective. So I just wanted to confirm that as you worked through your map and developed your map, you did not consider either partisan considerations or racial considerations.

CHAIRMAN HISE: Senator Clark.

SENATOR CLARK: Thank you for the question.

Absolutely not. As a matter of fact, Senator Newton, if I wanted to be a partisan, I certainly have it within my abilities to create a Democratic partisan gerrymander. I chose not to.

SENATOR NEWTON: Thank you.

CHAIRMAN HISE: Senator, follow-up.

SENATOR NEWTON: I do have a follow-up.

When you ran your amendment off, so we paused, we took a look, and there's a miscount here in terms of the intra county, city or municipal splits. And what I would like to do -- we -- I counted 17 splits that do not exist in the Senate map, so 17 additional municipalities are split under your map that do not exist in the Senate map by my count, but you

said there were 13 additional splits. So what I would like to do is go through the list that I have and maybe you can correct me and tell me which of these municipalities in fact are not split.

SENATOR CLARK: Well, I'm not going to be able to do that unless we sit down together with the maps themselves and with the reports generated by the staff. Certainly I can't sit up here at this podium and figure that out so you may as well save your time.

SENATOR NEWTON: Thank you. Mr. Chairman, I have a follow-up.

SENATOR CLARK: But I am more than willing to meet with you and go --

CHAIRMAN HISE: The senator is recognized.

SENATOR NEWTON: Okay. Well, for purposes of members of the public that are listening, committee members who are -- know the criteria know that it was our goal not to split municipalities. I'm going to list what I have as 17 additional municipalities that are split in your map.

Cary is split -- but in each one of

these they're kept whole in the Senate map.

Chapel Hill is split. Clayton is split. Dunn is split. Durham is split. Fuquay-Varina is split. Greenville is split. Harrisburg is split. Holly Springs is split. Lillington is split. Mooresville is split. Mt. Olive is split. Mount Pleasant is split. Raleigh is split. Winston-Salem is split. And I think that's it.

SENATOR CLARK: What about Dunn?

SENATOR NEWTON: That's it.

SENATOR CLARK: You forgot Dunn.

SENATOR NEWTON: Oh, Dunn. Yeah, I did miss Dunn. Sorry.

SENATOR CLARK: And can I respond to that, Mr. Chair.

CHAIRMAN HISE: You may respond to the question.

SENATOR CLARK: And one thing we need to understand also is that all splits are not equal. The Dunn split essentially splits off one person. It's in an adjoining VTD. So I had the decision to make, well, do I go split another VTD in order to keep from splitting a municipality or do I just leave it as is. One

person. I chose to just leave it as is.

And as a matter of fact, like I said, all splits are not the same. Some splits involve very little population, some involved a lot. And I appreciate the fact that my friends across the aisle made that one of their top priorities, not splitting municipalities. That was not one of my top priorities.

SENATOR NEWTON: Thank you, Mr. Chairman.

CHAIRMAN HISE: Thank you, Senator Newton.

Senator Nickel.

SENATOR NICKEL: I think this is a good -- a good committee discussion, but once all the debate is finished, I'll have a motion on this map.

You know, for the committee, there are I think two things that I want to share that give me nightmares. Number one, it's being on the floor of the Senate and having Senator Hise table my amendments. I think that's probably happened more than any other senator since I've been here. And number two, it's being unprepared in front of Judge Fitch in his

courtroom. There are some judges you just don't mess with, and if you don't have your facts and you lie to them, they get really upset.

And to say that the map that we just passed is a fair map and not an extreme partisan gerrymander is just laughable. And so I would just say to the committee, you know, if you're going to say that, judges get pretty upset, and judges like Judge Fitch, you know, they let you know about it.

But my question for Senator Clark is twofold. Number one, there were a lot of outside groups who have scored these maps. I'd like to know what they scored the map that we just passed and the version of your map that they scored with a letter grade, A through F. And then also would you define extreme partisan gerrymandering as a map that guarantees election of to 71 to 79 percent of seats from one political party.

SENATOR CLARK: Thank you, Senator Wiley.

First of all, unfortunately, we were unable to determine the performance of maps that we had completed within this committee because

we chose not to use the partisan data for the purposes of evaluation. I agree and understand that they did not want to use it in the construction process. However, we all did understand that there were going to be nonprofit entities out there rating these maps.

And, yes, the Princeton Gerrymandering group and the FiveThirtyEight group were among those, and they rated the Clark 7/7 maps, as people referred to them, as A's in every circumstance. And like I said, I didn't seek out with an objective of making a proportional map, but what the map proves, based on what those entities have said, is that it is in fact a proportional map that provides, or likely will provide, proportional representation, and I say that again recognizing that our US Constitution doesn't require that. Our state constitution does not require that. However, it could be an objective of this body, but it is not. But clearly for the common folks out there like myself and Senator Lowe, our idea of fairness, that if you have seven in the west, you ought to have seven in the east. If you have -- if you're going to have one in every other major

geocultural region, you ought to have one in the Sandhills too.

And what was that other question, Senator Nickel?

SENATOR NICKEL: How do you define extreme partisan gerrymandering?

SENATOR CLARK: Oh, extreme partisan gerrymandering, okay.

Well, people have their own definitions of this, but I like to use the construct report to us by the mathematicians and they use what's called an ensemble analysis. So they use their mathematical wizardry to generate hundreds of thousands of maps made, and they take these maps that we've created and they establish a distribution and they see where these maps we've created fall within that span.

Now, if you're somewhere in the central tendency in that process, you'll say that's probably not gerrymandering, but if somehow or another your map shows up on the tail end of that distribution, you have an indication that something might be awry there and that it may not be consistent what might happen in a natural order, in other words, what might happen if we

did things like in a 7/7 way, if we did things in a way which every major geocultural region had a congressional district embedded in it.

You know, it's not likely that such a map is going to show up at the tail end of those distributions. My guess -- and it's only a guess because I'm not a mathematician and I don't personally know how to do it, but if you were to compare the 7/7 map and the distribution such as that, it would likely on the central tendency is my guess. Because there's been this grand myth out there that we can't draw a fair map in North Carolina that will provide proportional representation because, as we've heard before, because all the Democrats live in the cities. Well, I think the 7/7 throws that notion out of the window completely. It reveals that statement for what it is.

So when you have a map that purportedly -- I don't know. I'm not a smart guy. I can't do that kind of analysis -- but purportedly will generate a seat distribution along the lines of 10 Republicans and 4 Democrats on a good day and the one according to FiveThirtyEight, Princeton Gerrymandering

groups, that might generate, I don't know, what, maybe 7/7 or maybe 8/6 or something like that. I think when you compare those two in terms of seat distribution, one certainly would likely lie at the extremes and people would call that partisan gerrymandering, Senator Nickel. I hope that answers your question.

CHAIRMAN HISE: Senator Marcus.

SENATOR MARCUS: Thank you.

Senator Clark, since you're from the Sandhills and I am not, I would like you to provide your belief to this committee about whether any part of Mecklenburg county has ever been considered to be part of the Sandhills region.

SENATOR CLARK: I'm glad you asked that, Senator Marcus. At the public hearing that took place down in Robeson county, there was a lady there who lived in Mecklenburg county -- I mean, excuse me, not Mecklenburg county. Yeah, it was Mecklenburg county. That's correct, Mecklenburg county. And she now lives in Robeson county. And you know what she told us, Senator Marcus. She said that when she was in Mecklenburg county, she was in a

particular congressional district, and she found her way all the way to Robeson county in her new home and lo and behold she was still in the same congressional district. It's like what in the world. How in the world, she thought, could I still be in the same congressional district. Mecklenburg county has absolutely nothing in common with folks out there in Robeson county. It's two completely different worlds. It makes absolutely no sense.

And in our current congressional districting plan, it does not need to be that way. You could have two compact districts there. And it certainly does not need to be there again in the proposed congressional districting plan. Thank you, Senator Marcus.

SENATOR MARCUS: One additional question, if I could, Mr. Chair.

CHAIRMAN HISE: Final follow-up.

SENATOR MARCUS: Senator Clark, do you -- have you had an opportunity to compare compactness scores? That's one of the criteria that this committee adopted, and we haven't really talked about compactness scores. I don't know if you've analyzed your map as compared to

the map we already passed out, the Republican version map. And if so, could you share that information.

SENATOR CLARK: Thank you, Senator Marcus.

When it comes to the compactness scores, I had to take the Senator Lowe approach. I assume he properly shares my approach. What do the common people see when they look at that map, the regular folks out there? We could stand up here and talk about Polsby-Popper, Reock, cut edges, whole convection, whatever, about 30 different doggone compactness scores available in Maptitude, but of course the committee said you can, you may consult those. Didn't say you had to.

And even with regard to the Polsby-Popper and Reock, we didn't set a limit on what value would be considered good. Sometimes Polsby-Popper gives a better reading than the Reock. Sometimes they give the same reading. As a matter of fact, as a trivia question, what geographic figure would give the same reading on a Polsby-Popper and a Reock score? A circle. Thank you, Senator Marcus. A

circle. They both give the value of one. Because when we talk about the Reock, essentially what we're doing is dividing the perimeter -- I mean, dividing the area of the district by the minimum circumscribing circle. And when we do the Polsby-Popper, it's going to be the area of the district dividing by a circle of equal perimeter. But when you start talking stuff like that to our folks back at home, what you talking about? Man, look at that. Did you see my map -- put -- where's my map at. Well, you have a picture of it.

Now, that's a pretty map. And you have to admit -- I know you're not going to admit it, but that's a pretty map. And the folks at home look at that and they say he did a good job on that map. And I know it's true because they've told me so. It's a pretty map. Nothing looks jerked up or jacked up in that thing. And even to the extent it does, if it does, there's a rationale behind it that they understand why it is the way it is. And I've gone through great pains to try to explain to them why the map is the way it is, what was my thinking behind doing that map.

And to the credit of Senator Blue and the attorneys out there, they let me up here to just speak my mind. They didn't try to tell me how to do the map. They didn't say, well, preserve district for so and so or for this person or that person, just do the map. That's what I did.

Senator Hise.

CHAIRMAN HISE: Members, I will just say the Reock and Polsby-Popper scores are part of your stat pack that you've received for each of the districts that are attached to the map.

SENATOR CLARK: So if you want to take a look at those numbers, have at it and come back to me and tell me what they mean.

CHAIRMAN HISE: Senator Daniel.

CHAIRMAN DANIEL: Thank you, Mr. Chair. I'd just like to make a comment.

So, you know, Senator Clark has referred to Senator Lowe quite a bit in his remarks, and I know in the previous bill, you know, Senator Lowe indicated that his county of Forsyth was grouped with Lincoln county in the previous map. Well, in this map Forsyth County is split in half. In fact, Winston-Salem is

split almost 50/50 down the middle. It's actually 55/45, but this district traverses all the way to Polk county. And so if you just -- you know, we've talked about travel times and so forth. So, you know, from Winston-Salem to the county seat of Lincoln county, which is Lincolnton, you know, it's a 90-mile -- 90-minute drive. If you do the travel time from Winston-Salem to the county seat of Polk county, which is Columbus, that's a two-and-a-half-hour drive.

So I'm not sure Senator Lowe, based on his criteria he stated earlier, should be necessarily happy with this map more than the previous map. He can speak for himself, of course.

SENATOR LOWE: I certainly will.

CHAIRMAN DANIEL: But that's the -- that's the reality of this map is it splits multiple -- and Colonel Clark said that splits aren't all equal. Well, that's true. Of course, the Senate map only splits two municipalities in the state. Well, this one splits Charlotte 66/34, Clayton 84/16, Durham 83/17, Greenville 54/46, Harrisburg 73/27,

Mooresville 63 -- 64/36, and Winston 55/45. So there's quite a number of major municipal splits.

So it's interesting that, you know, sometimes we hear the opposing party saying, well, all of us should be all represented by one congressman, but then they embrace, well, it's okay if we split all these into two congressional districts. So I just kind of wanted to note the inconsistency in the arguments that we hear sometimes in this committee.

SENATOR CLARK: Mr. Chair, I would like to respond.

CHAIRMAN HISE: I don't believe there was a question. I believe it was a comment.

SENATOR CLARK: I would like to comment, Mr. Chair.

CHAIRMAN HISE: I'll get to you in just a second.

Senator Edwards.

SENATOR EDWARDS: Thank you, Mr. Chair.

May I ask -- I'd like to ask Senator Clark if he has an overlay of the maps that he started out with in his presentation to

the congressional -- or to CGC-7 [sic], meaning that the presentation started with some very compelling maps that had population concentration, prosperity zones and that sort of thing. I'd just like to know is there an overlay available for us onto this map so that I could see the commonalties.

SENATOR CLARK: Thank you, Mr. Chair.

The slides that I have used are from the public records and you have complete access to them, if that's what you need.

SENATOR EDWARDS: Mr. Chair, do I take that as a no, there's not an overlay?

CHAIRMAN HISE: The committee does not have anything submitted that would be an overlay. I don't know if they could create one, but we don't have one.

SENATOR EDWARDS: Thank you. If I might be allowed to just make a few comments, then.

CHAIRMAN HISE: Recognized for comments.

SENATOR EDWARDS: When Senator Clark began the conversation in presenting those maps, I saw some slides, some data that really caught

my attention, and I thought, okay, these -- this is his basis, maybe we're going somewhere here, but the more that I reflect back on how I remember those slides to indicate those various areas, you know, prosperity zones established by Governor McCrory and population and such. And in my mind I try to overlay those to this map. There's absolutely no comparison whatsoever, and so I'm not sure that there's any relevance to those bases to this map.

My next thought is that I continue to hear this conversation about third parties scoring maps. Every indication that I've seen, in every one of those situations, partisan information has been used, and that's one of the criteria that this committee clearly said that we did not want to use.

And to me, as a member of this committee, I believe that our responsibility and our definition of fair should be did we draw these maps according to the criteria that the committee set out, not necessarily some group from Princeton or someplace else. Did we follow our criteria.

And then the last point that I'd like

to make is while -- I heard Senator Newton ask the question of Senator Clark was racial data used, and I thought that I heard the answer to that as being no. Well, I'm not a lawyer either. I'm just a common citizen legislator, but when I hear that consideration was given to not only VRA districts that are based off of racial data, but there was consideration given to VR districts that are ten years old which I think would be totally irrelevant. The reason we're drawing maps now is that constitutionally we're asked to draw maps after every census. And so I believe that while, obviously, there was some racial consideration in that thought, it's too old to be valid.

And then the last thing that I -- well, I said that was the last one. One more, really. I was part of the map-drawing process in the fall of 2019 when the court ordered us to redraw maps, and I remember vividly that one of the key criteria that we used then was to not split municipalities. And I hear Senator Clark saying, well, Dunn is only -- it's only one person, also it's okay, but then I hear Senator Daniel go through a list of other significant

splits that really worries me that we would set -- if we were to set ourself up with that criteria to the court ordered -- to the court orders in 2019, we would have failed miserably. And so I have a real concern with this map from that perspective as well.

Thank you, committee. I appreciate you indulging me.

CHAIRMAN HISE: Thank you for your comments.

Next, Senator Lowe. Senator Lowe does not want to speak.

Senator Clark.

SENATOR CLARK: I'd like to respond. There are a lot of statements made so I may miss a few so I'll start with the most recent regarding the criteria on municipal splits.

In the criteria we adopted this time is that municipalities may be considered. It did not say that we shall not split municipalities. When the members -- my Democratic fellows asked for a priority of the committee in terms of splits, we were told there was none.

You also mentioned earlier about the prosperity zones not matching up with -- exactly

with the map I have here for consideration. Well, of course not. First of all, there are fewer prosperity zones, and also the prosperity zones are not population balanced. What I said is it served as an input for me in terms of how districts might potentially be grouped.

And I forgot the other two things you said and what Senator Daniel said so it's hard for me to respond. If they really want an answer or just wanted to be heard, that's fine, but if you want an answer to the comment, I'm more than willing to hear the statement again and respond to it appropriately.

Oh, he did mention something that my criteria -- or something I had done may not sit well with Senator Lowe, but with all due respect to Senator Lowe, we get along quite well, but he didn't draw my map. I drew that for the betterment of the citizens as I saw it in the state of North Carolina. And if I caused some offense there, forgive me, but as we all know, there are compromises that have to be made in this process. Sometimes you may have to split a municipality that you don't want to. Sometimes you may have to split a VTD that you don't want

to. Sometimes you have to mess up your pretty map in order to balance the population. Stuff happens. It's -- at the same time it's an easy process but a complicated one trying to do the right thing. That's all I tried to do. I tried to do a map that the citizens would look at and they would say -- not just this committee, but they, folks out there watching this on TV today, they would say that this is a good map.

CHAIRMAN HISE: Senator Nickel, you had been asked earlier to be recognized for a motion.

SENATOR NICKEL: Are we all -- we're finished?

CHAIRMAN HISE: I have no additional speakers that have asked to speak.

SENATOR NICKEL: Move for a favorable report.

CHAIRMAN HISE: There's a motion on the floor for a favorable report for -- let's see. This is Senate Bill 737 as amended, we'll go with rolled into an original PCS unfavorable -- rolled into a new PCS unfavorable as to the original bill.

All those in favor please signify by

saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HISE: Opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HISE: The nos have it, does not receive a favorable report.

Senator Daniel.

CHAIRMAN DANIEL: A motion, Mr. Chair.

CHAIRMAN HISE: You're recognized for a motion.

CHAIRMAN DANIEL: Mr. Chair, I would move that Senate Bill 737 as amended receive an unfavorable report from the committee.

CHAIRMAN HISE: There's a motion on the floor of the Senate from Senator Daniel, Senate Bill 737 receive an unfavorable report to the bill as amended, also unfavorable to the original bill.

All those in favor please signify by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HISE: Opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HISE: The ayes have it and Senate Bill 737 will be reported unfavorably.

Senate Bill 738. Senator Chaudhuri.

And I think we'll go ahead and have staff go ahead and begin the process of passing this out. Oh, yeah, it was passed out.

Does every member have a copy of Senate Bill 738 1st Edition? I do not believe there's an amendment to this. All right. I think everybody's got it.

Senator Chaudhuri.

SENATOR CHAUDHURI: Thank you, Mr. Chair. I don't know if it's necessary to put my map on the screen or not for members of the public, but let me say from the outset, we've had a lot of folks talk about being citizen legislators becoming country folks. I'm just a lawyer, Mr. Chair, and I feel like I'm a caveman lawyer this afternoon. I'm just a caveman lawyer, and your world frightens and confuses me, to quote Saturday night live.

So what I thought I would do is walk through the map that I've drafted and provide an explanation similar to Senator Daniel and then I'll also comment on the objectives. I think one of the things that you will see with this map is it's actually quite similar to

Senator Clark's map, so I say that hopefully in order to avoid duplicative questions and move us along schedule.

So on the far east, you will see Senate District 3 that is a Senate district primarily comprised of the coastal counties. And as we move towards the east -- west, excuse me, you'll see Senate District 1 that runs from Granville county to Pasquotank county as indicated by Senator Clark. If you do look at the 2011 data that he had revealed, this could potentially be a VRA district that I believe would also answer some of the questions and concerns expressed by committee members with regard to the fact that under the Stephenson Supreme Court decision there needs to be compliance with VRA first before drawing the remainder of the districts.

Next, I'm going to move to Congressional District 2 which is a primarily downtown northern Wake district. I think it's important for purposes, as we've discussed here and has been highlighted by Senator Clark, that Wake county district has only been split twice and not three times compared to the Hise-Daniel map.

I will then move to Senate -- Congressional District 13. You will see in this congressional district as an example in comparison to the Hise-Daniel map, this actually keeps together all of southern Wake county. It also puts Cary and Morrisville together which I know is one of the comments that we heard during public comments and then extends to Chatham, Lee, and Harnett county which I believe are natural extensions of the Triangle and also share part of the economic development and recruitment as a region.

From there, we move to Congressional District 7 which runs from Johnston county all the way down to Brunswick and New Hanover county. This is essentially what would be called a southeastern North Carolina district.

Then we move to Congressional District 14. This is a variation of the Sandhills district. I think a couple of points to reiterate. For this district, one is I think the linkage between Hoke and Cumberland county is critical, and we talked about the military community of interest. In addition, I think a question was posed by Senator Blue, it is hard

to design and create a Cumberland county district -- it's hard to draw a Cumberland -- Sandhills district without including Cumberland county in it.

We then move to -- I'm going to move up north to Congressional District 4. This runs from part of Rockingham county to Person and then runs down to Alamance and Durham county. Again, is -- these counties have actually been clustered as legislative -- state legislative districts for a number of years and also share a lot of regional cooperation, including mental health cooperation. Also, it's important to note that I-85 runs through this district as well.

Then we come to Congressional District 6. This combines part of Forsyth and Guilford county. I think this clearly illustrates a Triad congressional county, again, similar to what Senator Clark mentioned and also important in highlighting that these communities of interest stay together. As you'll notice, Forsyth county here is not divided twice but only once.

And then we come to Congressional

District 8 which runs from part of Iredell county to the east of Randolph county, and then we come down to -- coming down to Congressional District 12 which is the Mecklenburg county district. As the criteria states, you should begin by splitting the county once, if possible, and so here we have Congressional District 12 which runs from the western -- southwestern part of Mecklenburg county all the way to the north.

And then we've created a Congressional District 9. Again, this is the eastern part of Mecklenburg county that includes Union and Stanly county which I think are natural part of the growth that we are seeing in Mecklenburg county.

We then come to Congressional District 10 which runs from Iredell to Rutherford county.

Congressional District 5 which is essentially the northwestern district running from Avery to Rockingham county.

And then lastly, Congressional District 11, which is the western North Carolina district as well.

This district -- some of these

districts, I should say, towards the end somewhat come close to the districts that have been presented by Senator Hise and Daniel.

Let me make a few other comments. I'm happy to take questions after that.

So as I mentioned, you know, the criteria that was mentioned -- that was agreed upon by the committee stated that voting districts shall be split only when necessary, and in this instance -- and I think this warrants a discussion if we want to revisit this. In these instances, the districts are only split up into 14 voting districts compared to 24, I believe, in the districts shared by Senator Daniel and Senator Hise.

Secondly, we've made -- I've made a reasonable effort to draw districts that are compact. And while Senator Clark wasn't willing to share his Reock, Polsby-Popper scores, I can tell you that the scores -- the average scores for this were .45 and .36. And those compact scores are certainly worth I think discussing in comparison and contrast to the maps that were shared by Senator Daniel and Hise.

And then finally, I should say

that -- or I should also say that this map attempts to consider member residence. And similar to Senator Clark's map really avoids any double-bunking that takes place.

And finally, I should mention that with regard to communities of interest, again, it's important to highlight the preservation of the Sandhills area and the fact that the three largest counties, Wake county, Guilford county, and Mecklenburg county, are only split once.

And that's my presentation, Mr. Chair.

CHAIRMAN HISE: Thank you, Senator Chaudhuri.

I will add that the previous map discussed was sponsored by myself, Senator Daniel, and Senator Newton, for those who are coming in just to make sure that's not left out.

Speaking of which, Senator Newton, I believe, has some questions.

SENATOR NEWTON: Thank you so much, Mr. Chairman.

Senator Chaudhuri, you identified certain communities of interest. Do you consider municipalities to be communities of interest?

SENATOR CHAUDHURI: Senator Newton, I'm happy to answer that question. Yes, I would consider municipalities be communities of interest, but I would also consider voting districts to be communities of interest, and I would also consider counties to be voting -- of communities of interest.

And I think to Senator Clark's point, it is difficult to identify what the priorities were for the criteria that was set out. And so I think as we discussed, there seems to be a clear trade off between the splitting of counties versus splitting of municipalities.

SENATOR NEWTON: Thank you. Follow-up.

SENATOR CHAUDHURI: Yes.

SENATOR NEWTON: So I have a list of the municipalities that your map splits. It's actually two more than Senator Clark's map split. I'm going to list these. Would you tell me if I'm in error with any of these municipalities.

I've got your map splitting Cary, Charlotte, Clayton, Concord, Durham, Eden, Elizabethtown, Eureka, Fuquay-Varina, Glen Alpine, Goldsboro, Greenville,

Holly Springs, Morganton, Mount Pleasant, Raleigh, Troutman, Wentworth, and Winston-Salem.

Is that a correct list of your municipal splits?

SENATOR CHAUDHURI: How many splits are those, Senator Newton?

SENATOR NEWTON: 19.

SENATOR CHAUDHURI: I didn't know if it was 19 splits, but I thought it was 14, but regardless, if the municipal splits or your count, I will accept your word for that.

SENATOR NEWTON: Thank you, Mr. Chairman.

SENATOR CHAUDHURI: Mr. Chairman, may I respond briefly.

CHAIRMAN HISE: Senator, you are recognized for comment.

SENATOR CHAUDHURI: Again, I think -- I think it's important to point out again that there was no priority identified with the municipal splits. And, Senator Newton, while you've identified some of the splits that have taken place with the -- with the municipalities that you've identified, I would tell you I'm happy to work with you to remedy the splits for

those municipalities provided that we can continue to protect and preserve the county splits. As I mentioned, and I think has been mentioned here a number of times today in this committee meeting, we're also seeing large county splits done twice in the three largest counties here in the state.

CHAIRMAN HISE: Senator Marcus.

SENATOR MARCUS: Thank you, Mr. Chair.

Senator Chaudhuri, you just started to touch on an issue that matters to me a lot from Mecklenburg county. If you could please, for us, compare how your map compares to Senator Hise and Senator Daniel's map on various criteria but --

CHAIRMAN HISE: And Senator Newton.

SENATOR MARCUS: -- specifically -- and Senator Newton. As long as we don't call it "the Senate map" which a few of you have been calling it. As far as I know, there is no Senate map yet.

-- specifically when it comes to slicing and dicing the major -- the large counties, like Mecklenburg, Guilford, and Wake.

SENATOR CHAUDHURI: Sure,

Senator Marcus, I'm happy to provide to you some comparisons and contrasts.

Is that your question about comparing and contrasting?

SENATOR MARCUS: Yes. Yes. That one specific criteria is important -- you know, is important to me, but there are many criteria so I would like to hear them all and hear your comparison between the two maps.

SENATOR CHAUDHURI: So, you know, I think to be clear, the map was not -- was not designed or drawn using partisan data, but as we now know based on third-party analysis, there have been public reports that have compared and contrast the different maps that have been published. And so let me start by first discussing the Princeton Gerrymandering Project.

You know, during the public comment period, we repeatedly heard that the Princeton Gerrymandering Project gave the map that was drawn by Senator Hise and Senator Daniel a fairness grade of F for what's described as a significant Republican partisan advantage. The gerrymandering project further points out that their map receives a partisan fairness

grade -- gives the Republicans a partisan advantage of 21.4 percent. The map that I presented, and I believe Senator Clark's map was similar, gets a fairness grade of A and gives no partisan advantage to either party. And in fact, the partisan advantage is actually zero percent compared to 21.4 percent Republican advantage under Senator Hise's map.

Second, Senator Marcus, I would point out that the analysis carried out by FiveThirtyEight, there were a few takeaways based on this. One is that Senator Hise's map would produce three Democratic-leaning seats, ten Republican-leaning seats, and one highly competitive seat. In contrast, this map would produce four Democratic-leaning seats, six Republican-leaning seats, and four highly competitive seats.

And then secondly, there is a so-called efficiency gap, and this is the idea that there's a difference between each party's share of wasted votes. The efficiency gap that's been scored for the Hise-Daniel map was 21.1 percent favoring Republicans. Generally, an efficiency gap score over 8 percent is a red flag. The map

that I present here before you has an efficiency score of 5.8 percent but still favoring Republicans.

And then lastly, an analysis from our nonpartisan staff found a compactness score, as I mentioned a Reock score of .42 compared to Senator Hise's-Daniel's Reock score of point -- excuse me. Ours was .45 and the Reock score for Senator Hise was .42. And our Polsby-Popper score was .364 versus the Hise-Daniel Polsby-Popper score of .30.

And while we've discussed the splitting municipalities, I should point out that this map splits only 14 voter districts compared to 24 voting districts by the Hise-Daniel map.

SENATOR MARCUS: Follow-up.

CHAIRMAN HISE: Follow-up.

SENATOR MARCUS: Thank you, Mr. Chair.

Two follow-ups. Could you explain what makes a Reock or Polsby-Popper score better. In other words, what do those mean? And then second, could you explain what a wasted vote is.

SENATOR CHAUDHURI: Yep. So as I think as Senator Clark mentioned, a Polsby-Popper Reock score is basically an indicator of

compactness. The closer you get to one, the more ideal the compact score is there. And so as we look at the higher score will be a general indicator of what is more compact in that instance.

And with regard to wasted votes, wasted votes is a measure in determining basically how many voters that would go to the poll would essentially not have their votes counted because of the districts being skewed towards one -- having one partisan advantage or the other.

And as I mentioned, the efficiency score as indicated by the FiveThirtyEight site points out that the Hise-Daniel map had a wasted score vote of 20.1 percent favoring Republicans. Generally, the red flag for an efficiency gap score is over 8 percent.

SENATOR MARCUS: Comment, please.

CHAIRMAN HISE: Recognized for a comment.

SENATOR MARCUS: That last thing that you mentioned, Senator Chaudhuri, we haven't talked about enough in my opinion, the idea of wasted votes because that to me matters to voters. I know you've all heard, I've heard

people say "I don't vote because my vote doesn't count. I feel like it doesn't matter. My district's already decided which party it's going to go for before I go."

And so that efficiency gap really goes to one of the major things this committee should be thinking about. And if we want to waste that high number of votes in order to get the Republican-submitted map here, I'd say that's very un-Democratic.

CHAIRMAN HISE: Senator Blue.

SENATOR BLUE: A question of Senator Chaudhuri.

I heard some issues raised about various things, some questions about your map. Do you think it would make sense to withdraw it and let us look at some of those observations? And if you're willing to do that, perhaps we can see what folk have had time to analyze and determine whether those are actually flaws in your map.

SENATOR CHAUDHURI: Mr. Chair.

CHAIRMAN HISE: Yes.

SENATOR CHAUDHURI: Yes, Senator Blue, I'd be more than happy to withdraw my map at the

current time so that we can reexamine some of the concerns raised by this committee.

CHAIRMAN HISE: We'll let the committee stand in recess just a minute.

[At ease.]

CHAIRMAN HISE: Thank you, members of the committee. After consultation with the chairs as well as with Senator Blue, the chairman will withdraw Senate Bill 738 from today's calendar and for consideration from the committee.

Having nothing else existing on the agenda, this committee will stand adjourned.

(Transcription from YouTube started at 1:00:15.)

CHAIRMAN NEWTON: All right. Good morning, everyone. Welcome to the Senate Committee on Redistricting. We're going to go ahead and get started this morning.

I want to begin by thanking our sergeant-at-arms for helping us today. We've got Michael Cavness. Michael, thank you. Thanks for being here. Rod Fuller is here. Hey, Rod. Jim Hamilton. Jim. Mike Harris and Sherrie Hedrick, thank you so much for being here and being a part of this team.

We are going to hear Senate Bill 739 this morning. Senator Hise is going to present that. Shortly thereafter, we are going to take a break. There are a number of amendments -- proposed amendments that Senator Blue and Senator Clark are going to be offering this morning. Those are in process. So we're going to take a little bit of a recess, then we will get our arms around those amendments, come back, do the Q and A around the map and do the amendments and Q and A around the amendments.

So with that, Senator Hise, the floor

is yours.

CHAIRMAN HISE: Thank you, all members. I'm going to present Senate Bill 739. You should have the map and the bill in front of you. I want to go through an explanation of the 50 districts and, once again, be thankful I'm not in the House. That's for coming in.

So Senate District 1 is created by county groupings chosen in northeast North Carolina. The chairs chose the configuration that makes SD 1 out of the following whole counties: Bertie, Camden, Currituck, Dare, Gates, Hartford, Northampton, Pasquotank, Perquimans, and Tyrrell.

The configuration leaves four of the five finger counties in the northeast in one district. We had some public comments about keeping these counties together or the northern Outer Banks together. Seven of the ten counties and 81 percent of the population in SD 1 are in the Norfolk media market, Camden, Currituck, Dare, Gates Hertford, Pasquotank, and Perquimans, while others are divided between Greenville and Raleigh containing 19 percent of the district's population.

All North Carolina counties in the Norfolk media market are in SD 1 except for Chowan county, this being a whole county district. There are no split VTDs or split municipalities within the counties in SD 1. The incumbent for this district is Senator Bazemore.

Senate District 2 follows the Roanoke River from Warren county to Albemarle Sound in Washington county, Chowan county directly across from the Albemarle Sound from Washington county. It is also grouped -- is also grouped in this district. Hyde county, also on the Albemarle Sound, is in this district as is Pamlico county. Along the Pamlico River and the Pamlico, five of the eight counties in the district are in the Greenville media market with the others being split between the Raleigh media market and the Norfolk media market. Two-thirds of the population of this district live in the Greenville media market. This being a whole county district, there are no split VTDs or split municipalities. In Senate District 2, there are two incumbents in this district: Senator Sanderson and Senator Steinburg.

Senate District 3 is created by the

base county grouping map: Beaufort, Craven, and Lenoir counties. This being a whole county district, there are no split VTDs or split municipalities. The incumbent is Senator Perry.

Senate District 4 is created by the base county grouping map: Green, Wayne, and Wilson counties. This being a whole county district, there are no split VTDs or split municipalities. The incumbent in Senate District 4 is Senator Fitch.

Senate District 5 is created by the base county grouping map: Edgecombe and Pitt counties. This being a whole county district, no split VTDs or split municipalities within counties. The incumbent for Senate District 5 is Senator Davis of Pitt county.

Senate District 6 is created by the base county grouping map: Onslow county. This is a single county district; no split VTDs or split municipalities.

Senate District 7 [unintelligible] together comprise Brunswick, Columbus, and New Hanover counties. Senate District 7 is created by the county grouping choice in southeastern North Carolina. New Hanover county

is slightly larger than the maximum senate district, therefore the chairs chose to move three whole precincts out of Senate District 7 into Senate District 8.

Senate District 7 is thus New Hanover county minus these three precincts: CFO-1, CFO-6 and HO-1. These precincts were selected to keep all the municipalities in New Hanover county whole and to keep as much of the population in the county as possible in Senate District 7. The district based in the county, there are no split VTDs or split municipalities within New Hanover county. The incumbent for Senate District 7 is Senator Lee.

Senate District 8 includes Brunswick and Columbus county plus the previously mentioned precincts in New Hanover county. There are no split VTDs or split municipalities within the counties of the district. The incumbent is Senator Rabon.

Senate District 9 and 12 make a two-district, seven-county cluster also created by the county grouping decision in southeastern North Carolina. Bladen, Duplin, Jones, and Pender counties are whole in Senate District 9.

Sampson county is split between the two districts. The chair chose to leave as much of Sampson county whole in Senate District 9 as possible. They had the choice of moving one precinct from northern Sampson county into Senate District 12; however, this would have split two municipalities and removed more residents from Sampson county into Senate District 12 than the alternative which they selected, which was to split the two precincts leaving the town of Plain View intact in Senate District 12 and the town of Spivey's Corner and the rest of Sampson county intact in Senate District 9. There are two split VTDs and no split municipalities within the counties in the district. The incumbent for Senate District 9 is Senator Jackson.

Senate District 12 is made up of Harnett and Lee county plus the municipalities of Plain View and Sampson county as described above. There are two split VTDs shared within Senate District 9 as previously mentioned and no split municipalities within the counties in the district. The incumbent for Senate District 12 is Senator Berger.

Senate District 10 is created by the base grouping map Johnston county. It's a single county district. There are no split VTDs or municipalities.

Senate District 11 is created by the base grouping map: Franklin, Nash, and Vance. Being whole county district, there are no split VTDs or split municipalities. The incumbent for Senate District 11 is Senator Barnes.

Granville and Wake counties form a six-district, two-county grouping in the base senate map. Within this grouping, the chairs are attempting to keep municipalities whole while splitting as few precincts as possible to accomplish this task and comply with the one person, one vote. The overall population when this -- within this county grouping is 1,190,402, meaning the ideal population for each of the six districts is 198,400, which is only 52 people above the minus 5 percent deviation minimum for senate districts in the state. In other words, all six districts were incredibly close to the minus 5 deviation minimum and some VTDs had to be split to the comply with the one person, one vote within Wake county.

Raleigh is too large for one senate district and, therefore, must be split. The chairs were unable to keep Cary or Apex whole within a district due to the populations and geography. However, all other municipalities -- Fuquay-Varina, Garner, Holly Springs, Knightdale, Morrisville, Rolesville, Wake Forest, Wendell, and Zebulon -- were kept whole. Ten percent were split in Wake county to keep the municipalities whole and balance populations between the districts. Ten precincts were split to keep the populations whole.

Senate District 13 includes Granville county and unincorporated areas in northern Wake county plus the north wake towns of Rolesville, Wake Forest, Zebulon -- and Zebulon. Raleigh, the second largest city in North Carolina, again is too large for a senate district and was, therefore, contained in four senate districts. Over 98 percent of Raleigh is in three senate districts. Senate District 13 has the smallest portion of the population, less than 2 percent. The towns of Rolesville, Wake Forest, and Zebulon are left whole and 100 percent of their

Wake county populations are within Senate District 13.

One precinct was split with Senate District 18 to keep Wake Forest whole. Two precincts were split with Senate District 14 to keep Wendell whole. In the district, there are no incumbents in Senate District 13.

Senate District 14 includes Garner, Knightdale, Wendell, southeast Raleigh and parts of downtown Raleigh. 21 percent of the population of Raleigh is in Senate District 14. There are no split municipalities in the district other than Raleigh. 100 percent of the populations of Garner, Knightdale, and Wendell are in the district. As mentioned, two of the precincts are split with Senate District 13 to keep Wendell whole in Senate District 14. Three precincts are split along the southern edge of the district to keep Garner whole. Two precincts are split in east Raleigh to balance its population with the districts within the deviation range. The incumbent in Senate District 14 is Senator Blue.

Senate District 15 is in west Raleigh downtown and contains a portion of eastern Cary.

36 percent of the population of Raleigh is in Senate District 15. Within the district, 85 percent of the population is in Raleigh and 12 percent is in Cary. Senate District 15 splits two precincts with other districts to balance population. The incumbent in this district is Senator Chaudhuri.

Senate District 16 is centered in Cary and western Wake. 80 percent of the population of Cary is in Senate District 16. 45 percent of the population of Apex is in the district. The town of Morrisville is kept whole within Senate District 16. Of the population of the district, 69 percent is Cary, 15 percent is Morrisville, and 13 percent is Apex. There are two split precincts to balance population. One was Senate District 15 and one was Senate District 17. The incumbent for Senate District 16 is Senator Nickel.

And Senate District 17 includes Holly Springs, Fuquay-Varina, 55 percent of Apex, and 6.5 percent of Cary. Three VTDs were split to keep Garner whole in Senate District 13, and another VTD was split to balance population between 17 and 16. The

incumbent in this district is Senator Batch.

To recap, the Wake county senate map, the chairs decided to split ten VTDs to balance the population of the districts and to make as many of the municipalities as whole as possible. Apex, Cary, and Raleigh were each split into more than one district, and Fuquay-Varina, Garner, Holly Springs, Knightdale, Morrisville, Rolesville, Wake Forest, Wendell, and Zebulon were each left whole within one district.

Cumberland and Moore county form a two-county, two-district grouping in the base map. Senate District 19 was drawn to keep as much of Fayetteville as whole as possible. The city of Fayetteville has an irregular shape and many satellite annexations and shares precincts with other municipalities such as Hope Mills, and the chairs were not able to leave it whole. The result is a district that includes over 88 percent of the population of Fayetteville and nearly 15 percent of the population of Hope Mills. There are no split VTDs in the district. The incumbent in Senate District 9 is Senator deViere.

Senate District 21 was drawn keeping

Moore county whole in part with the remaining rural areas of Cumberland county. As stated above, the irregular shapes of municipalities and precincts containing more than one municipality in them made it difficult to keep all municipalities whole.

Senate District 21 includes 85 percent of the population of Hope Mills and 12 percent of the population of Fayetteville. There are no split VTDs in Senate District 21, and there is no incumbent in the district.

Chatham and Durham counties form a two-county, two-district grouping in the base senate map. Senate District 20 includes all of Chatham county, any unincorporated Durham county, and the peripheral Durham city precincts. The town of Chapel Hill has some territory in two Durham county precincts. The chairs decided to keep the town of Chapel Hill whole and place both the precincts in Senate District 20. Most of the City of Durham is in Senate District 20 and Senate District 22, but SD 20 includes 30 percent of the city's population. There are no split VTDs in the district, and the incumbent is Senator Murdock.

Senate District 22 was drawn within the city of Durham. The city is larger than a senate district and is, therefore, split between Senate District 22 and Senate District 20. 70 percent of the population of Durham will reside in Senate District 22. There are no split VTDs in Senate District 22. Senator Woodard is the incumbent in the district.

Senate District 23 is created by the base county grouping map: Caswell, Orange, and Person counties. This being a whole county district, there are no split VTDs or split municipalities. The incumbent in Senate District 23 is Senator Foushee.

Senate District 24 is also created by the base county grouping map: Hoke, Robeson, and Scotland counties. This being a whole county district, there are no split VTDs or split municipalities. There are two incumbents in this district, Senator Clark and Senator Robins -- Senator Britt from Robeson. Sorry.

Alamance, Anson, Cabarrus, Montgomery, Randolph, Richmond, and Union counties comprise a seven-county, four-district grouping with the Senate Seats 25, 29, 34, and 35. The county

grouping is the base group in the senate map. Because of how the counties are aligned and the populations that live there, the counties must be split between districts are Cabarrus, Randolph, and Union. Alamance, Anson, Montgomery, and Richmond counties were left whole within the district.

Senate District 25 comprises Alamance county and eastern Randolph county. The chairs opted to keep as many precincts whole in Randolph as possible while also keeping municipalities whole. One precinct was split to keep all of Asheboro whole in Senate District 29 and to keep all of Randleman whole in Senate District 25. All other precincts in Randolph county are left whole as are municipalities in the county. Senator Galey is the incumbent for Senate District 25.

CHAIRMAN NEWTON: Senator Hise.

CHAIRMAN HISE: Yes.

CHAIRMAN NEWTON: I just want to congratulate you for being halfway through.

CHAIRMAN HISE: Actually, it's a little more than that, but that's good.

Senate District 29 comprises the rest

of Randolph county, including all of Asheboro and the eastern side of the county, all of Anson, Montgomery, and Richmond, and eastern and southern portions of Union county. Within Union county, the district line was drawn to keep all precincts and municipalities whole. Senate District 29 shares one split precinct with Senate District 25 in Randolph county to keep the city of Asheboro whole. There are no split municipalities within counties in the district. There are two incumbents in Senate District 29: Senator Craven and Senator McInnis.

Senate District 35 comprises of the rest of Union county and parts of the southernmost VTDs in Cabarrus county. The chairs opted to not take the entire VTD, leaving the blocks north of the town of Midland in Senate District 34 to leave as much of the population of Cabarrus county in the district base there as possible, that being Senate District 34, and to make the populations of the districts within the pod fall within the plus or minus 5 percent range. All the districts in this county grouping are above the ideal population number with Senate District 34 and 35

above 218,000 people, just below the limit of 219,227.

A second VTD was split in Senate District 34 to keep the entire municipality of Midland within 30 -- within Senate District 34. The chairs were able to leave the municipalities of Locust whole in Cabarrus county. Most of the town is in Stanly county, but there are portions in Cabarrus. The Cabarrus county portion of Locust is, therefore, split between Senate District 34 and Senate District 35. The incumbent in Senate District 35 is Senator Johnson.

Senate District 34 comprises most of Cabarrus county. There are two split VTDs, as mentioned before, and one split municipality. The Cabarrus county portion of Locust, the incumbent in Senate District 34 is Senator Newton.

Guilford and Rockingham counties form a two-county, three-district grouping in the senate base map. Rockingham county is left whole in Senate District 26. Senate District 26 includes the unincorporated and bedroom community areas of Guilford county along with

Rockingham county. Greensboro is too large to be contained in one senate district and is, therefore, split.

Senate District 26 does not contain any G precincts, Greensboro [unintelligible] that begin with the letter G, but it does include 4 percent of the city's population. One VTD was split, SDRI, in western Guilford county to keep the population of Kernersville, the Guilford county portion, most of the municipalities in Forsyth county but within Senate District 26, therefore in total there is one split municipality, Greensboro, and one split VTD in Guilford county. The incumbent in Senate District 26 is Senator Berger.

Senate District 28 is drawn respecting the city limits of Greensboro as much as possible. The city's too large for one senate district, so Senate District 28 is situated in the northern two-thirds of the city. 68 percent of Greensboro's population is in Senate District 28. There are two incumbents in the district: Senator Robinson and Senator Garrett.

Senate District 27 includes most of the rest of Greensboro, specifically the southern

sections of the city and the city of High Point, leaving the Guilford portion of the municipalities whole. There is no incumbent in Senate District 27.

Senate District 30 is created by the base county grouping map: Davie and Davidson counties. This being a whole county district, there are no split precincts or split municipalities. Senator Jarvis is the incumbent in Senate District 30. 30, 32. Sorry.

Senate District 31 and 32 are in a two-county pod that includes Stokes and Forsyth counties. The chairs opted to pair Forsyth and Stokes instead of Forsyth with Yadkin because the resulting districts both within Forsyth-Stokes county groupings and the Alexander-Wilkes-Surry-Yadkin groupings are more compact and because its configuration leaves two more municipalities whole spanning the two counties Germantown and King which span Forsyth-Stokes county line.

Senate District 31 is drawn to keep Stokes county whole and to keep as many municipalities whole within Forsyth as possible. Senate District 31 keeps the suburban towns

around Winston-Salem whole: Bethania, Clemmons, Germantown, Kernersville, King, Lewis, Rural Hall, Tobaccoville, and Walkertown. This configuration keeps the municipalities King and Germantown whole across the Forsyth-Stokes counties. There are no municipalities that span the Yadkin-Forsyth county line, the alternative option for the two-county groupings, therefore selecting the Forsyth-Stokes county grouping option creates more compact districts and keeps two more municipalities whole across the counties.

Senate District 31 also includes parts of Winston-Salem that are in shared precincts with these two towns. The populations of Winston-Salem is too large for one senate district, therefore it is split between Senate District 31 and Senate District 32.

Senate District 31 contains 16 percent of the city's population. There are no split VTDs in the district. The incumbent in Senate District 31 is Senator Krawiec.

Senate District 32 is drawn within the city of Winston-Salem since it's larger than the population range for a senate district. Senate

District 32 contains 84 percent of the population of Winston-Salem. All VTDs were left whole in Forsyth county. The incumbent for Senate District 31 is Senator Lowe.

Senate District 36 is created by the same grouping choice in northwestern North Carolina: Alexander, Surry, Wilkes, and Yadkin counties. The alternative configuration for this district follows the Stephenson criteria, and Alexander, Surry, Wilkes, and Stokes trading Yadkin for Stokes. The chairs opted for the configuration that includes Yadkin because the district is more compact and leaves two more municipalities whole that span the border of Forsyth and Stokes. There are no split VTDs or split municipalities within this district, and there is no incumbent for Senate District 36.

Senate District 33 is created by the base county grouping map: Rowan and Stanly counties. This being a whole county district, there are no split VTDs or split municipalities within the counties in the district. Senator Ford is the incumbent in Senate District 33.

Six senate districts are contained in

the two-county grouping of Iredell and Mecklenburg county. Senate District 37, 38, 39, 40, 41, and 42. The county grouping is created by the base map.

Senate District 37 keeps Iredell whole and contains the northmost precincts of Mecklenburg county. The municipality of Davidson spans Iredell and Mecklenburg county, so Senate District 37 includes the Mecklenburg precincts containing Davidson, keeping the Mecklenburg and Iredell portions of that municipality whole. Part of Davidson is in Cabarrus county, but that piece of the municipality is in Senate District 34.

The town of Cornelius is too large to also fit in Senate District 37, and a split municipality is unavoidable. Senate District 37 includes 33 percent of the population of Cornelius. This is the only split municipality in the district. There are no split precincts. The incumbents in Senate District 37 are Senator Sawyer and Senator Marcus.

I would like to note that the Senate Democrats' amendment for Mecklenburg and Iredell county contains this same district, Senate

District 37, exactly the same way, creating the same double-bunking.

Senate District 38 is in northern Mecklenburg county, directly south of Senate District 37. This includes the town of Huntersville, 67 percent of the town of Cornelius, and 14 percent of the city of Charlotte. Charlotte, the largest city in the state, has over 857,000 people and is therefore contained in the five Mecklenburg base senate districts. Senate District 38 includes about a dozen north Charlotte precincts. There are no split precincts in this district, and the incumbent is Senator Mohammed.

Senate District 39 is in western Mecklenburg county and includes the unincorporated areas along with the Gaston county along and the South Carolina border along with parts of uptown, west Charlotte, Still Creek and the town of Pineville and southern Mecklenburg county. Of the population in the district, 81 percent is in Charlotte, 5 percent is in Pineville, and 14 percent is in the unincorporated areas of the state. Of the total population of Charlotte, Senate District

39 contains about 20 percent of the population. There are no split VTDs in this district. Senator Salvador is the incumbent in Senate District 39.

Senate District 40 is in northeastern Charlotte and includes 24 percent of the city's population. Of the population in the district, 96 percent is in Charlotte and 4 percent is in unincorporated areas of Mecklenburg along the eastern edge of the county bordering Cabarrus. There is no split precincts in the district. Senator Waddell is the incumbent in Senate District 40.

Senate District 41 includes south Charlotte and the towns of Matthews and Mint Hill. They're unincorporated areas in the district. Of the population in the district, 71 percent is Charlotte, 14 percent is Matthews, 12 percent is Mint Hill, and the remaining 4 percent is Union county base municipalities with territories in southern Mecklenburg and unincorporated areas. Approximately 18 percent of the population of Charlotte is in this district. There are no split precincts, and there is no incumbent in Senate District 41.

Senate District 42 includes parts of uptown Charlotte, south Charlotte, and east Charlotte. 100 percent of the district's population is in the city of Charlotte. The district includes 25 percent of Charlotte's population. There are no split precincts in Senate District 42, and the incumbent in the district is Senator Jackson.

There are two options for county groupings in the southwest part of the state. The chairs selected the county group configuration that combines Cleveland, Gaston, and Lincoln counties in a 3-2 district pod, Henderson, Polk, and Rutherford counties in a 3-1 district pod, and Buncombe, Burke, and McDowell in a three-county, two-district pod. The chairs selected this because the resulting districts are the most compact.

Senate District 43 is drawn within Gaston county and keeps all the precincts and municipalities whole. Five VTDs were pulled out of the Gaston county district, the three Cherryville VTDs, Landers Chapel, and Tryon, to stay within the correct population range. The incumbent in District 45 is Senator Harrington.

Senate District 44 is comprised of the five VTDs from Gaston county and Cleveland and Lincoln counties. There are no split precincts or municipalities within the counties in Senate District 44. The incumbent in this district is Senator Alexander.

Senate District 48 is combined of three county groupings: Henderson, Polk, and Rutherford counties. This being a whole county district, there are no split municipalities or precincts. The incumbent for Senate District 48 is Senator Edwards.

Senate District 46 includes all of Burke and McDowell county plus unincorporated precincts and small towns in Buncombe county. One VTD is split to keep the municipality of Woodfin whole within Senate District 49. There is no split municipalities in the district. The incumbent for District 47 is Senator -- 46 is Senator Daniel.

Senate District 49 includes the rest of Buncombe county, including Asheville, Biltmore Forest, Weaverville, Woodfin -- and Woodfin. This splits one VTD mentioned above to keep Woodfin whole. There are no split

municipalities in the district. The incumbent for District 48 is Senator Mayfield.

The senate based map includes a western North Carolina county grouping comprising three districts, 45, 47, and 50, and 17 counties, Alleghany, Ashe, Avery, Caldwell, Catawba, Cherokee, Clay, Graham, Haywood, Jackson, Macon, Madison, Mitchell, Swain, Transylvania, Watauga, and Yancey. Because of how these counties are aligned and the populations, the counties must be split between districts are Caldwell and Haywood.

Senate District 45 contains all of Catawba county and a portion of Caldwell county. The chairs kept the municipalities in Caldwell whole as Lenoir -- with Lenoir going to Senate District 47 and the small towns in the southeast of Lenoir in Senate District 45. There are two split precincts in Caldwell to keep the municipalities of Lenoir whole. There are no split municipalities within the district. Senator Proctor is the incumbent in Senate District 45.

Senate District 47 includes the rest of Caldwell county, all of Alleghany, Ashe, Avery,

Madison, Mitchell, Watauga, and Yancey counties and a portion of Haywood county. The chairs kept all municipalities and VTDs whole within Haywood county. In Haywood county, Senate District 47 includes the town of Canton. The larger municipality of Waynesville is left whole in Senate District 50. There are no split municipalities in the district, and only the two split precincts shared with Senate District 45 to keep Lenoir whole. There are two incumbents in Senate District 47, myself and Senator Ballard.

Senate District 50 includes the rest of Haywood county, includes all of Cherokee, Clay, Graham, Jackson, Macon, Swain, and Transylvania. There are no split precincts or municipalities in the district. Senator Corbin is the incumbent for Senate District 50.

CHAIRMAN NEWTON: Senator Hise, thank you. That's a lot of work, especially for a math guy. Very well done.

[Applause.]

CHAIRMAN NEWTON: Yeah, give him a hand. Well done.

So, Members, where we're going to go

from here is I'm going to be making a statement of the chairs. We have a number of amendments that are being pulled together that I think will answer or go to many of the questions that you may have for Senator Hise.

So what we're going to do, I'm going to provide you the statement of the chairs, we're going to then pause, go into recess for enough time to get our arms around these amendments, see what we've got, then we'll reconvene and you'll be able to ask Senator Hise any questions you have about the map and then follow that with your amendment if you think that cures a concern that you have.

So, Senator Hise, you're welcome to take a seat at this point because you're not going to have to be asked any questions until a little bit later.

So the chairs wanted to be direct and address an issue that's being raised by some, and that is whether the General Assembly is required to draw districts using racial data. We've also received a lawsuit already from -- against the General Assembly filed before the plan has even passed. This interest

group activity litigated against the General Assembly this past decade and succeeded in developing some of the strict limits on permissible racial consideration -- racial considerations it now asks us to defy. I want to explain at the outset why we cannot do that. So just to be clear, they litigated to limit our ability to use racial data, we're choosing, as we did in 2019, not to use racial data, and now they're litigating, saying we should have used racial data.

So first, the General Assembly, the allegation is, cannot draw districts using race -- well, no, this is the law. Apologies.

First, the General Assembly cannot draw districts using race under the Voting Rights Act unless we satisfy the three Gingles preconditions. They are, one, a reasonably compact majority-minority VAP district; two, a politically cohesive minority community; and three, white bloc voting usually defeating that community's candidate of choice.

To draw VRA districts according to Covington and other recent court cases, the General Assembly would need a strong basis in

evidence -- quote, a strong basis in evidence, for each of those three factors. Specific evidence would come in the form of reliable racial bloc voting analysis by an expert in the field. Spreadsheets and argument based on inadequate data do not create the strong basis in evidence the General Assembly would need to overcome a constitutional challenge.

Second, if we draw districts using race and we do not satisfy the Gingles preconditions, we risk violating the Equal Protection Clause of the 14th Amendment to the United States Constitution. In short, making one districting choice over another for racially predominant reasons will be subjected to strict scrutiny by the courts.

Our present record and most recent litigation does not provide a yes answer to any of the Gingles factors. Our two most recent redistricting efforts, overseen and approved by the courts, in the Covington case and the Lewis case did not consider race. In fact, in Lewis, a three-judge panel analyzed all regions of the state last year, last year, and found no region where the Gingles factors were met. Some have

asked about whether the Stephenson case require that race be used in redistricting. Stephenson says VRA districts must be drawn first only if there are VRA districts. Stephenson does not require VRA districts be drawn independent of the requirements of federal law. Stephenson assumed there would be VRA districts because Section 5 of the VRA then applied here which meant VRA districts would need to be preserved independent of the Gingles factors I just discussed, but the US Supreme Court has held that VRA Section 5 no longer applies which means it no longer protects the General Assembly from racial gerrymandering claims.

Now, I'll discuss district-specific issues several members have asked us about.

In the Wilson-Wayne area, we do not have any proposed plan from any member of this body that includes a reasonably compact majority-minority district in that area. If you have one, and we mean a complete plan with a majority-minority VAP district in that area, please provide it. If no such district can be drawn, then there is no need to continue the Gingles analysis. Creating such a district

would violate the 14th Amendment's Equal Protection Clause.

In addition, the General Assembly cannot justify departure from the whole county rule for expressly and predominantly racial reasons without a strong basis in evidence of the type I described earlier. Under current law, only majority-minority districts required under Section 2 of the VRA can be formed prior to other districts in a plan under Stephenson. Following this request would put the map squarely in conflict with the 14th Amendment.

Some members of this committee have also expressed concern about the grouping decision we made for SD 1 in the northeastern part of the state. The General Assembly is not in a position to create so-called crossover districts in this map. First, Section 2 of the VRA does not require such districts.

Second, if the General Assembly were to engage in such race-predominant drawing, they would run into claims of racial gerrymandering under the 14th Amendment and they would be without the protection of the VRA to survive strict scrutiny.

Finally, no one has given the General Assembly the data necessary to develop a strong basis in evidence for engaging in such drawing. That district was drawn with neutral criteria predominating as just explained when going over the map.

In short, we take our role and the legal precedence that guide it seriously. We reject the notion that we should flout binding precedent and clear guidance from the courts even when facing a lawsuit from a litigious group that developed some of the very guidance it now asks us to ignore.

Now we'll take a short recess in order to see these proposed amendments, and after that we will open the floor for the committee to ask questions of Senator Hise and to consider those amendments. So let's take a break. We will recess until -- what time is it, about ten till. Let's go till quarter after, and if that's not enough time we may have to go back and recess for a few more minutes. Thank you. So we recess now until 10:15. Thank you.

(Transcription from YouTube ended at 1:40:34 and started again at 2:21:59.)

CHAIRMAN NEWTON: We are going to conclude our 15-, 20-minute recess now, and we're at the point in the agenda where we are going to open the floor to members to ask any questions of Senator Hise that you might have but also to offer any amendments that you may have. So, members of the committee, the floor is open for either questions or for amendments.

Senator Clark.

SENATOR CLARK: I'd like to send forth an amendment.

CHAIRMAN NEWTON: Thank you. Senator Clark's sending forth an amendment.

Do the members have that already, Senator Clark? Not yet. Okay. So they'll need to be passed out.

CHAIRMAN HISE: Which one is it?

SENATOR CLARK: SCG-3.

CHAIRMAN NEWTON: Question for staff. Are we going to hand out all the amendments to the --

UNIDENTIFIED SPEAKER: Do you want to do that? Are all the amendments --

CHAIRMAN NEWTON: I'd rather go ahead and hand them all out. Members, we'll try to

give them to you in order so you can minimize the shuffling, but that way you've got them and we won't have to pause for distribution for every -- because there's a bunch of amendments being offered here, so let's go ahead and send them all out.

CHAIRMAN HISE: Do we want to put them in packets and hand them out that way?

[Unintelligible.]

CHAIRMAN NEWTON: Members, just FYI. There are going to be 12-ish proposed amendments. And again, we're going to try to give those to you in order.

So, Members, they're coming to you in reverse order to make your life a little bit easier.

I'm now going to remove my guarantee that they're in reverse order. They may not be. We'll figure it out.

Members, you should be receiving SBVA Amend-3 is the last map you're handed, but it will be the first map we discuss -- or amendment.

Members, we're almost ready to go. We are going to go out of order, just to make

things interesting as we get started here. SCH Amendment 1 is going to be the first amendment to be discussed. If you want to go ahead and shuffle your packet, it should be the second one down in your packet.

All right. Members, we are going to go ahead and get started again. And at this point I'm opening the floor to members for amendments or questions of Senator Hise.

Senator Clark.

SENATOR CLARK: I'd like to send forth an amendment, Mr. Chair.

CHAIRMAN NEWTON: Okay. Thank you, Senator Clark. Which amendment are you sending forth?

SENATOR CLARK: SCH Amendment 1, Cumberland county and Moore county cluster.

CHAIRMAN NEWTON: All right. Thank you. Senator Clark, are you moving for the amendment, or you just want to explain it at this point?

SENATOR CLARK: I will explain and ask that it be accepted.

CHAIRMAN NEWTON: Thank you. You have the floor.

SENATOR CLARK: Okay. Thank you, Mr. Chair. I appreciate y'all's effort to do a grouping -- or should I say separation within the group of a senate district between Moore and Cumberland counties. However, I think I have an option that will probably serve the communities of that -- those two counties a little bit better.

As you come down from Moore county, which is numbered Senate District 21 in this particular iteration, the first thing you see essentially is Fort Bragg, which is that large block Manchester precinct that is there, and adjacent to it in the top right-hand corner you will find the Spring Lake precinct, and then this little knob down at the bottom is what we call west area. Essentially, they provide for a very tight community of interest within the Fort Bragg community that is also associated with this lower tier in Moore county which much of it has been designated as a protection for the military training environment.

But instead of coming down and forming a block such as you all do, I connect this Manchester precinct with some of the

northwestern precincts in Cumberland county as well as Hope Mills. So essentially it is splitting the same municipalities as your plan, both of them split Fayetteville and both of them split Hope Mills, but I believe this supports the community of interest concept much better. And for one thing, like the -- I guess you can say the top portion of this, what looks like a C beneath the Manchester precinct, that is a part of what we call the big bang expansion in Cumberland county, when Fayetteville expanded out from its original boundaries, and it picked that area up. And then to the south of that you have Hope Mills, so we have all of the Hope Mills precincts.

But as you indicated, because of the irregularities in the VTDs within Cumberland county, invariably you're going to, you know, possibly split a municipality, and that's why we split a little bit of Hope Mills, just as your plan does, in addition to splitting Fayetteville.

So that being said, Mr. Chair, I recommend to the committee that we adopt this version of the cluster.

CHAIRMAN NEWTON: Thank you, Senator Clark.

So Senator Clark is moving that we adopt this amendment. First, are there any questions by members before we take that vote? Any questions of Senator Clark on his amendment?

All right. If not, those in favor of Senator Clark's adopting this amendment to the map say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN NEWTON: Those opposed.

COMMITTEE MEMBERS: No.

CHAIRMAN NEWTON: All right. The nos have it.

So thank you, Senator Clark. Are you up next as well?

SENATOR CLARK: I'm not up next. Senator Blue is up next.

CHAIRMAN NEWTON: All right. So just so the record is clear, SCH Amendment 1 was voted nay, and now we have SBV Amendment 3; is that correct?

SENATOR BLUE: Is that the first one? I'm sorry, I'm out of order here. I'm trying to -- is that the northeast one?

CHAIRMAN NEWTON: I have -- we took Senator Clark's out of order at his request.

SENATOR BLUE: I want the northeast cluster.

CHAIRMAN NEWTON: Okay. Senator Blue is asking to go to the northeast cluster which is SBA Amend-2. Is that what you'd like?

SENATOR BLUE: Yes, that's it. It was initially SST 10.

CHAIRMAN NEWTON: It should be the next to last map in your packet, Members, SBA Amend-2. And this is -- Senator Blue is offering this amendment.

SENATOR BLUE: Yes. Thank you, Mr. Chairman. If everybody has gotten it, I'll comment.

CHAIRMAN NEWTON: Okay. Senator Blue, you have the floor.

SENATOR BLUE: Thank you, Senator Newton.

First, I'd like to sort of follow up and explain in this district what the comments that the chair ably stated just before we took a recess, and that is whether the General Assembly is required to draw districts regarding race.

And I simply go back to the Stephenson decision that said that before you do any clusters or do any kind of redistricting, you first must determine the VRA districts. And I say it against this context. At least as I understand it -- and I don't hold myself out to be an expert in this area and haven't litigated in it in 40 years, but let me simply say that if you look at Senate District Number 1 and Number 2, there are two clusters up there, and there was a choice of clusters that the committee made.

I heard Senator Hise explain the historic reason of putting certain counties together in that area, but history indicates just the opposite has happened.

There are seven or eight counties along the North Carolina-Virginia border that historically I'll call the black belt of North Carolina because they're majority black counties, and you don't need to consider race or statistics to know that. If you -- again, I go back to eighth grade geography. It's one of the lessons you learned. And if you go to the efforts in the 1960s, voter registration efforts

and all that, you got it reinforced, and when I was in college in the '70s you got it reinforced again. And those counties have not significantly changed population percentages. They're losing populations like all of the other counties -- almost all of the other counties in that region.

Starting in 1980, after the census, starting in '81, when the districts were drawn, there was no minority district drawn up there. There was one black House member who had gotten elected in 1980, the first African American from that area, that entire area of the state to be elected since 1900 -- either 1898 or 1900. And so following that is what led to the Gingles decision. A lawsuit was filed. It was originally Gingles versus Edmisten, because Rufus Edmisten was the attorney general. A lawsuit was filed. It was a Section 5 lawsuit, meaning that the counties had to be pre-cleared. There were 42 counties in North Carolina under Section 5 of the Voting Rights Act that had to be pre-cleared. You couldn't change them without getting the justice department's permission.

The justice department objected. Went back, tried to fix them again. A district was drawn up there in 1984, after the Gingles decision, and that's where the doctrine that you just recited came from. And the Gingles decision, later changed to Gingles versus -- the successor to Rufus Edmisten as attorney general and later on another name. But anyhow, the court in that case decided that you had to, because of history in that area, and that history was a history of polarized voting, that you had to draw certain districts in there if as -- again, using your criteria, if they were reasonably compact, if there were politically cohesive, meaning they voted primarily, minorities in that area, as a bloc, and you could show racially polarized voting, that is, you could show that whites tended not to vote for African Americans in that district.

The districts were drawn, it later evolved in the mid '80s to a senate district drawn pretty much along that same area, with those seven counties in it.

What you have here is -- and in Senate District 1, with the amendment that I'm

offering, is putting those counties back together naturally, because that's how they've been, and they have elected a minority from that district I think since it was created. That became the case in the 1990s in the various lawsuits that came about. Even when the justice department wasn't sure what they were requiring with congressional districts, they required that one up there. That was the case in 2000, the district was drawn with those counties together, and it was the case in 2011.

Now, an interesting thing happened in America during that time and particularly in North Carolina. Initially, Guilford county and Cumberland county and Mecklenburg county were affected counties because of their voting patterns, and you can show all of these Gingles factors.

Over the course of the last almost 40 years, since the Gingles decision by the United States Supreme Court, areas of the state are less polarized in their voting patterns. Wake county never was a Section 5 county, neither was Durham county. And in fact, in the Gingles decision, the court pointed out that

Durham was not a Voting Rights district because you could not show polarized voting, although you could show the other aspects of it. Durham, as Wake county, had elected African Americans countywide, the judgeships, county commission races, and various other races, so you could not show polarized voting and, consequently, you couldn't create majority-minority districts.

The problem -- and I think the way it was described, and I know that folk interpret this different ways -- is that Rucho -- the case Rucho in 2011 that was filed was because even in places that you had not had -- you could not prove racially polarized voting, this General Assembly took the number of minority voters in every district in the urban areas, in every district that African Americans represented with the exception of Orange county, took them up to 50 percent plus one minority voters, voting age population and minority voters. That way all of the districts that were represented by African Americans were placed in the category of Voting Rights Act districts, they weren't, but what that case brought to the forefront was a doctrine called packing which meant that you

would put all of the African Americans, or the minorities, in as few districts as possible, and that's what you did when -- this assembly did, you were not here so you didn't do it.

So when you took all of these districts up to 50 percent plus, the court did not make the specific determination that they were -- the determination was not made that you could justify 50 percent certainly in non-VRA districts but even more so in VRA districts such as this district was. And it said now because the idea behind the Voting Rights Act was overtime to ameliorate the effects of polarized voting and the inability of blacks to get whites to vote for them, and all of the counties in eastern North Carolina were part of the 42 that were covered by Section 5 of the Voting Rights Act.

Section 2 of the Voting Rights Act covered the entire country, not just this -- the way Section 5 affected 42 counties out of 100 in North Carolina. But the court said in Rucho that what you have done in taking all of these districts above 50 percent is in violation of the Voting Rights Act. First, you haven't shown

the Gingles measurements, and it is possible to have VRA districts that are not 50 percent plus. Justice Kennedy said in his ruling that if in fact you try to dismantle a VRA district where you can create one, then that raises serious questions under the 14th Amendment and the Voting Rights Act, the Equal Protection Clause of the 14th Amendment.

So when you say that you haven't shown any VRA violations, it begs the question that you don't have to show 50 percent in the district for it to be an operating VRA district.

The point that I've been trying to make all along is if you can show that you can draw a VRA district that meets these criteria, you don't have to draw that district because you can analyze what's been going on over time, and you can take that number down because ideally, all of us want that number to disappear, but you gradually take it down without doing it abruptly. And when you do it abruptly, you dismantle districts where you've shown a history of polarized voting.

And that's what the letters to the chairs and to all of the members were trying to

get at; that the preliminary evidence shows that you have a responsibility to inquire as to whether or not there is further need for a Voting Rights Act district. The burden of making the inquiry is on the legislature, not on citizens out here because when citizens do it, they sue you because you haven't done it. And Stephenson says that you will make that analysis before you do all of the clustering and all of the other things.

What becomes obvious here in this cluster -- and mind you, the Voting Rights Act trumps the clustering, and that's why Stephenson says you first make the inquiry as to whether you can create -- or you must create VRA districts. You can show up in the northeast that you can create a VRA district, and you can show that you can -- look, I will tell you, it probably would take four hours to get from one end of the district that you've recommended down to Carteret county. No direct way to do it. You might have to catch boats, planes, and cars to get there. But the point is that there have been districts drawn down there that have been determined to be compact, now, even if they

meander through 8 or 10 or 12 counties and they dip into counties, affecting counties that ought not be affected in it you can draw, because we've drawn in the past, and the population is still there to support a VRA district.

What I've offered in this amendment is a solution to that problem, a simple solution. The fact of the matter is, as pointed out in the communications that have come to the chair, is that this district, as appears up here, that was created by the clustering, not by any drawing that I've done, all whole counties, are certainly much more compact than the two districts that the committee is recommending. But what I've shown is is that you can adopt that cluster and you got a functioning VRA district just by accepting this top cluster with those counties in it.

It is currently represented by an African American woman, and it would still be -- she would still be residing in that district. You're not looking at race figures in the district, but the communication that you got indicated that black candidates, African American candidates had consistently scored

50 percent of the vote -- 50 plus percent of the vote, so you don't have polarization to the extent that whites are not voting for African Americans, and they point out that in those districts, 53 percent of the vote went to these African American statewide candidates. And that's how they suggest that there's enough information that would make you inquire whether or not you can create a functioning district without having 50 plus percent in that district.

Because you can create the district without the disruption that creating a full VRA district would require, it seems the choice would be to create that district because then would you not tear into all of those counties, ferreting out the black vote in all of those counties the way the 1980s, 1990s, and 2000 district initially did before the whole county provision was reactivated in 2003. And prior to that time, I might add, that for 20 years plus, the state was districted without regard to the whole county provision in the state constitution because folk had assumed that it was repealed by the Voting Rights Act.

So that's why I'm offering this

district. The two groups that have communicated with the chair and with this committee have made it plain to you that this is a VRA district. You have all the tools at your disposal to inquire as to whether you can create it, how you would create it, but they point out to you that based on this anecdotal evidence you clearly still have a degree of racially polarized voting. I believe, and I think you believe too, that it's not to the degree that it was in the 1980s or 1990s, but it hasn't gotten to the point that it is in these urban areas which are no longer -- which no longer have the degree of polarized voting that existed, those areas that were covered by Section 5 and, again, all of us by Section 2.

One of the things -- and I'll point this out because I've been asked about it. Gingles, the decision, and you can read it in black and white, points out, and they point it out in Gingles itself, and we've referred to it in many cases since then, that you can do, as far as drawing, whatever you need to in Durham county now, in Wake county, in Mecklenburg county, and in Guilford county, and that on its

face is not violating the Voting Rights Act unless you can show packing again in Guilford county or Cumberland county. But with respect to the others, there is no Voting Rights Act violation unless you unreasonably take the black vote beyond the level where it is functioning effectively, but that doesn't say that you can go 50 percent plus without justification because that was Gingles -- I mean, that was Rucho. And Rucho did not say you no longer look for Voting Rights Act districts and that there are none any more. Rucho just said you hadn't done the study that supports your taking these districts to 50 percent plus. And the case was finally resolved when this legislature redrew the districts, took them down in the 30s and 40s. There are African Americans representing senate districts with 20 some percent African American population that went up to 50 plus. Rucho said you got to bring that back down. There were districts such as mine that went back into the low 30s and had not been in the 40s.

And I'll just make one comment and I'll shut up on this amendment. There were nine senate districts represented by African

Americans prior to 2011. Nine. None of them except this one -- I believe this was the only one. There were three districts in the east, but none of them, I believe except one, had a VRA greater than 50 percent, yet all of them had elected African Americans which showed that the Voting Rights Act was working and you were bringing the polarization down and we were all getting to the point that I hope all of us aspire to.

So I'm suggesting to you that this district, this district recognizes the progress that's been made, but it does not dismantle a district without at least doing the baseline study which has a burden on the General Assembly to do. You indicated you had not done it, you did not plan to do it, and this morning, Senator Newton, you indicated you were not doing it because you didn't see any need to do it because the people who litigated it to the limit -- to limit it now want to make you look at it. The people who litigated it litigated it because you had packed all of these other districts and said you got to unpack and make sure that the Voting Rights Act is working, not that you're going

back to pre-1965 practices.

So this district in the northeast, District 1, whatever it is officially, would -- it's reasonably compact, because it's a cluster; it's politically cohesive, because that's what the information from these various groups have told you that it is; and there is racially polarized voting in it to some extent but not to the degree -- not to the degree that you got to create a district that's 50 percent plus African American minority.

Now, you say that there's no expert evidence available. The burden is on this General Assembly to have the experts tell you that there's no need for it, not on the citizenry to tell you that there is a need. But if you're looking for that, the public hearings tell you that the citizens in this district think you ought to preserve the district as it is and keep those counties together.

What you've done in choosing one option over the other with these two -- and again, they're two clusters. You can choose one cluster over the other. Senator Hise explained why you chose the first cluster. Well, the

first cluster hasn't been like that over the years. It hasn't been like that in the earlier cluster, and it should not present an excuse to you to do it like that when you know that you're dismantling a functioning VRA district.

So I'll answer any questions, but I would move the adoption of the amendment, Mr. Chair, because I believe -- I sincerely believe that in this map that you've presented there are two viable Voting Rights Act claims that would survive in this action.

Now, the theory might be -- and I don't know what the lawyers' strategies may be on this. The theory might be that maybe you want to tee it up and let the supreme court decide further what Section 2 means or what the Voting Rights Act means, but what you do is put the burden of doing that on the taxpayers of North Carolina. And again, we spend tens of millions of dollars litigating something that at the end of the day we're going to lose unless the United States Supreme Court significantly changes the law on it. And we go back up to a fourth circuit that issued some of the harshest rulings in the last cycle about North Carolina's

redistricting than it did of any other redistricting in the country from any of the circuit courts -- or any of the three-judge panels. I'm sorry.

And so I would ask you to really look seriously at this. And I will offer one more amendment so that you can absolve the state of Voting Rights Act violations and litigate whatever else you have done in the context of whether it is political gerrymandering because those are the choices. You had two issues in 2010 decade: Racial gerrymandering, which I have just described to you why the court reversed it, but the court didn't say you didn't have to look at it. And secondly, political gerrymandering. The issues that might remain in Guilford county and Cumberland county or the other urban counties are issues of political gerrymandering unless you far exceed what the court said in 2015 or '16 you had to do with respect to creating minority districts within those areas if you were going to create them, and no requirement that you create them, but you can't unreasonably -- I don't think there's a requirement except maybe again in Greensboro and

Fayetteville because it was covered -- as long as you don't unreasonably discriminate against minorities.

But what I am trying to offer to you is a way to stay clear of federal court with respect to the racial gerrymander and leave open these issues of the political gerrymander, because that's the only thing that I've seen the letters about, these two districts, and those clearly are racial gerrymander issues that bring in other parts of the state that don't have to be involved in we fix them here without leaving it to the courts to send it back and involving a much broader swath of the state.

CHAIRMAN NEWTON: Thank you, Senator Blue.

Senator Hise, or any other members that may have comments or questions.

CHAIRMAN HISE: I'd like to respond.

Members, I think it is clear with what we have here that this is not a consideration under the Voting Rights Act. I think Senator Blue has made it clear several times that that is a separate consideration that must be done first and considered prior to the

consideration of county pods, if it's necessary. We may disagree on the concept of whether those standards have been met, whether the anecdotal evidence proves those standards have been met.

But this decision is clearly about Stephenson groupings in the two districts. We have moved on -- Stephenson requires, says ten counties are grouped in one manner and eight counties are grouped in another, there are two options for doing so. And so his amendment presents one of those options, our amendment presents -- our bill presents a different option chosen. Both meet the Stephenson criteria. Both are drawn under the Stephenson criteria.

As I have said previously, the chairs looked at this extensively and made a decision as to which of those best conformed communities of interest. We looked at compactness. The map you currently have -- not the amendment. District 1 is the most compact of the four districts that are created in the map. The fingerling counties and [unintelligible] are most contained within this map. Four of the five are placed together in the current map. It moves it to a 3/2 split in the other map.

Particularly looking at the northern Outer Banks region, the map that you have contains all of those counties together in a more compact district. So I would ask that the committee reject the amendment and consider the map as is.

SENATOR BLUE: Mr. Chairman, can I ask Senator Hise a question.

CHAIRMAN NEWTON: Thank you, Senator Hise.

Yes, you may. Senator Hise.

SENATOR BLUE: Senator Hise, you indicate that your map is more compact. How do you determine that having a map that runs from Warren county down to Carteret county is more compact than what we see on the board up here.

CHAIRMAN HISE: Senator Blue, I'll be clear on what I said, not transpose what I said.

There are four districts that can be created. District 1 in the map that we currently have is the most compact of the four districts.

SENATOR BLUE: Let me ask another question --

CHAIRMAN NEWTON: Follow-up. Sure, Senator Blue.

SENATOR BLUE: And so it's your testimony that you chose -- you chose the district in your map because it is more compact than the other two?

CHAIRMAN HISE: I can repeat my answer.

SENATOR BLUE: Please do.

CHAIRMAN HISE: District 1 that is created is the most compact of the districts formed. I also stated that it keeps more of the finger counties, which we heard from both comments and others that are community of interest, keeps more of those counties together within that map and keeps the northern Outer Banks region together within a map.

I also talked about in the choice for the districts comparing the media markets that the two were in versus which ones are in the Norfolk media markets and which ones are in the Raleigh or Greenville media markets for those considerations. All of that went into those considerations for determining communities of interest as well as looking at the compactness.

CHAIRMAN NEWTON: Follow-up, Senator Blue.

SENATOR BLUE: Follow-up.

So that I understand, then, compactness is the dominant issue in this choice of districts.

CHAIRMAN HISE: I never said that. I said it is one of the issues.

SENATOR BLUE: What are the other issues that --

CHAIRMAN HISE: Considering communities of interest, and that included a consideration of the fingerling counties, that included a consideration of the media markets that the counties are in and the northern Outer Banks region.

SENATOR BLUE: Follow-up.

CHAIRMAN NEWTON: Follow-up.

SENATOR BLUE: So the media market is in your opinion a legitimate community of interest?

CHAIRMAN HISE: It identifies -- it would help identify a community of interest, yes.

SENATOR BLUE: Follow-up.

CHAIRMAN NEWTON: Yes, sir.

SENATOR BLUE: Did you examine the community of interest of all of these

traditionally African American counties and agricultural counties as opposed to aquacultural counties or various other things that the coastal counties might entail?

CHAIRMAN HISE: Senator, we looked at as many considerations as we could to identify which of these two choices were the better choice to make between the grouping -- the 10/8 groupings of the counties, and from what we concluded, with keeping the fingerling counties whole as well as the northern Outer Banks region together that this better met the needs of that region.

SENATOR BLUE: Further question.

CHAIRMAN NEWTON: Yes, Senator Blue.

SENATOR BLUE: Did you consider the community of interest of the northern border counties?

CHAIRMAN HISE: I would say that with the exception of inland to Halifax or Warren, so -- and the only one of those that happens to be different would be Warren, all the northern border counties are the same -- with the exception of Warren county are in the same district in both maps.

CHAIRMAN NEWTON: Follow-up, Senator Blue?

SENATOR BLUE: Yeah, further question.

CHAIRMAN NEWTON: Yes.

SENATOR BLUE: In looking at the map that's displayed on the screen, could you tell me what the communities of interest are if you start in the northeast at Warren county, which is the extreme -- northwest, rather, in the pink and go all the way down to Carteret county which is in -- below the south central eastern part of North Carolina.

CHAIRMAN HISE: Senator Blue, I did not determine the two possible groupings for the counties. We were just in a position to make a choice between the two possible groupings.

SENATOR BLUE: Further follow-up.

CHAIRMAN NEWTON: Another follow-up.

SENATOR BLUE: My question is what is a community of interest if I flow through them from Warren county, then looks like is it Halifax, Northampton and then down a couple hundred miles or so to Carteret county which is a coastal county?

CHAIRMAN HISE: Other than looking at

what I've said previously about a similar media market for those counties, I would say that we have identified and mentioned the communities we were trying to keep whole and keep together, and when choosing between two groupings of counties, there was only one grouping of counties that did that.

SENATOR BLUE: I think one last question, if I could, Mr. Chairman.

CHAIRMAN NEWTON: Yes, sir.

SENATOR BLUE: Senator Daniel pointed out yesterday, when we were considering the congressional map, that one of the things that you had considered or that you thought about was the travel time. One of the congressional maps caused him some hiccups with respect to travel time. I think it may have been from Forsyth county down to Lincoln county.

Did you have an idea of what the travel time is from Warren county down to Morehead City?

CHAIRMAN HISE: I don't. I'm sure that's a number we could get you on what the travel time is.

I will tell you that it is clear that

when you're doing congressional maps, you are not drawing predetermined poddings of counties that you choose between. So congressional maps are open. There -- we did the analysis. There are no poddings of counties in congressional maps. In this manner, we had two choices of podding between two groups of poddings to choose from.

SENATOR BLUE: So -- and one last one.

CHAIRMAN NEWTON: One last, last one.

SENATOR BLUE: As I understand it -- as I understand it, in this grouping, the only thing that mattered was compactness.

CHAIRMAN HISE: I never said that. I said we looked at a lot of considerations, and what we -- and I could go through them all again, which communities were important to stay as together as possible, what media markets they were in and others and made the choice for the other podding different than this amendment.

SENATOR BLUE: Well, that does call for one last question.

CHAIRMAN NEWTON: Okay.

SENATOR BLUE: And as I understand it, the media market in Warren county, what's that

media market? Is it Raleigh?

CHAIRMAN HISE: I can go back through and see if I've got --

CHAIRMAN NEWTON: Senator Blue, we're hearing someone in the gallery saying, yes, it is in fact Raleigh.

SENATOR BLUE: What about Carteret county?

CHAIRMAN HISE: Bertie, Tyrrell, Northampton, Raleigh.

So I have that the Greenville media market is Carteret, Hyde, Martin, Pamlico, and Washington that's coming in. The Raleigh media market will be Halifax and Warren. The Norfolk media market will be Chowan. The Greenville media market would also be Bertie and Tyrrell in the northern, and Raleigh would be in the Northampton media market. The rest, Camden, Currituck, Dare, Gates, Hertford, Pasquotank, Perquimans, in the Norfolk market.

SENATOR BLUE: Would Carteret --

CHAIRMAN NEWTON: Senator Blue, you have a last, last, last, last, last question.

SENATOR BLUE: Yeah, just a follow-up because I'm intrigued by this media market

element.

CHAIRMAN NEWTON: Sure.

SENATOR BLUE: But is it fair to say, and I'll put multiple ones together, there's a New Bern media market that would be affecting this district, there's a Wilmington media market that would be affecting this district as well as a Greenville media market?

CHAIRMAN HISE: We have identified a Greenville media market. I'm assuming the others --

SENATOR BLUE: Well, there are TV stations in all of those towns.

CHAIRMAN HISE: I come from the mountains so we're all pretty consistent on where WLOS or those go to, but they identify -- those areas identify their media markets.

SENATOR BLUE: Thank you.

CHAIRMAN NEWTON: Thank you, Senator Blue.

Senator Marcus, no, your question has been answered.

Seeing no -- Senator Nickel.

SENATOR NICKEL: Yeah. I just kind of did a double take with the distance and looked

on my phone to try to figure out how long it would take someone to go from Emerald Isle in Carteret county all the way up to -- I found Wise, North Carolina, right along the Virginia border. And Senator Blue is about right, if you stop for a rest break, it's about 4 hours, 177 miles, and that's if you're cutting through Senator Perry, Senator Davis, Senator Barnes' districts to get there.

You know, so my question just is what does somebody living in Emerald Isle, all the way on the bottom there on the coast, have in common with someone living in Wise, North Carolina, way on the Virginia border, up there, in Warren county.

CHAIRMAN NEWTON: So, Senator Nickel, I'll allow Senator Hise to answer that question, but I think it's essentially asked and answered multiple times with Senator Blue, but Senator Hise.

CHAIRMAN HISE: Having served for 10 years in a district that's over a three-hour drive from Marshall to Tryon, about three and a half, if you do that, I understand the complexities of doing so, but that is in a lot

of ways the geographics of the map and the county pods that formed.

CHAIRMAN NEWTON: Thank you.

Anything else, Senator Nickel?

Okay. Well, with that, Senator Blue has moved for the adoption of SBA Amendment 2. All those in favor say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN NEWTON: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN NEWTON: The nos have it.

So the next amendment -- I'll ask the proponent. The next one that I have on my list is actually right back up to the top which is SBV Amendment 3. Is that what you would like to pursue next?

UNIDENTIFIED SPEAKER: Just Buncombe county.

CHAIRMAN HISE: Buncombe, McDowell, Burke. It's red and pink. It's on the screen as well.

CHAIRMAN NEWTON: It's up to the sponsor what order you'd like to take these in. I've done my best.

[Unintelligible.]

CHAIRMAN NEWTON: Okay. Not that one. Members.

SCH Amendment 2. Is that the Moore, Cumberland 21, 19 districts. Okay, very good. All right. And who is going to be offering these?

SENATOR BLUE: I'll talk about it. I want to first ask Senator Hise a couple questions since this is before us, but I want to ask Senator Hise a couple questions.

CHAIRMAN NEWTON: Okay. Go ahead.

SENATOR BLUE: Yes. Senator Hise, I'm trying to get straight in my mind these criteria that the committee adopted, and they were all listed with specific statement by you, I believe, that you couldn't rank order them, but you could consider all of them depending on what you were looking at at the time.

And what I'm trying to figure out about this is you mentioned that keeping municipalities whole was one of the priorities at least in the other maps that you've drawn; is that right.

CHAIRMAN HISE: And continues to be in

both maps, yes.

SENATOR BLUE: Keeping municipalities whole. And following that, what was the next most important criteria that you think you applied?

CHAIRMAN HISE: Senator Blue, I can go through the entire list of the criteria. We have made no statements about most important or next important. These are the criteria of the committee, and we considered them when drawing maps.

SENATOR BLUE: Okay. So is it fair to say --

CHAIRMAN HISE: Each member will make their own choice.

CHAIRMAN NEWTON: Senator Blue.

SENATOR BLUE: Thank you. So is it fair to say that you got this set of criteria and no one criteria determined the outcome?

CHAIRMAN NEWTON: Senator Hise.

CHAIRMAN HISE: So, Senator Blue, I would not say that that -- I think that is true for several criteria. There are criteria in the maps that I do see as absolute. We had said that -- when we said that we would comply with

the Voting Rights Act, we will comply with the Voting Rights Act. When we said that the Stephenson groupings -- so violating the Stephenson groupings would be absolutes for the committee to consider. Not using race, not using political data were absolute considerations of the committee.

Beyond that, we moved to considerations minimizing -- which is not an exact science, but minimizing, dividing counties, dividing VTDs, dividing municipalities. All of those have varying levels that maps are drawn to try to accommodate them, but there were also absolute criteria that we felt were important to comply with.

SENATOR BLUE: Another question.

CHAIRMAN NEWTON: Yes, Senator Blue.

SENATOR BLUE: And what made me ask you that question, Senator Hise, is because in many of the clusters, as you explained them earlier this morning, it appears that you prioritize not splitting municipalities. For example, when you say that next door in Sampson county that you decided -- you went out of the way to split a precinct in order to keep I believe the

municipality of Plain View, one of those places next to the hollerin' capital of the world.

CHAIRMAN NEWTON: Spivey's Corner.

SENATOR BLUE: Yeah, Spivey's Corner. You went out of the way not to split precincts -- or you went out of the way, rather, to split a precinct to keep the municipality whole, but in Cumberland county your map decided to split Hope Mills.

Tell me, what was your thought process in determining the split Hope Mills and not Plain View?

CHAIRMAN NEWTON: Senator Hise.

CHAIRMAN HISE: And I believe in the same map we, by necessity, also split Fayetteville. With coming in, for the way it was coming, it is a balancing factor, and in choosing to make -- you know, could we choose to split a single VTD in order to keep a municipality whole, we made that choice and could do so. Would that choice be different if it required splitting multiple VTDs that's coming in in order to keep a municipality whole would be a different consideration and decision.

SENATOR BLUE: Follow-up.

CHAIRMAN NEWTON: Follow-up.

SENATOR BLUE: Now, in your map, I believe you split Fayetteville several times; is that right?

CHAIRMAN HISE: Fayetteville is split.

SENATOR BLUE: Several times.

CHAIRMAN HISE: Fayetteville is split. There's a portion -- I think it came to 12 percent or something like that of Fayetteville is in a different district.

SENATOR BLUE: Just for information, you had to split it because of Fort Bragg, I believe you got to split it at least once, but you split it more than once.

CHAIRMAN HISE: We did keep -- all the military installations are whole within a district.

SENATOR BLUE: And one last follow-up.

But you split Hope Mills also.

CHAIRMAN HISE: I believe we did.

SENATOR BLUE: And would you agree that a better cluster map in Cumberland county would be one where you didn't jeopardize any of the other criteria? You kept municipalities whole, you didn't split precincts, et cetera,

et cetera.

CHAIRMAN NEWTON: Senator Blue. I mean, I'm sorry. Senator Hise.

CHAIRMAN HISE: He'll answer his own question. That's the attorney side.

What I would say is, again, it is weighing multiple considerations, and the challenge would be, in doing so, taking a district that was 80 percent contained in Fayetteville and trying to divide it to more of a 50/50 district would be something that would weight that decision I think more towards keeping more of Fayetteville within a district.

SENATOR BLUE: Okay. Thank you, Mr. Chairman.

Senator Hise, I offer you a district that does not split Hope Mills in Cumberland county and it splits Fayetteville only in the place that you split it. I believe it splits Fayetteville only at that place. I'm trying to remember my geography of my used-to-be next door neighboring county, but I think it -- but if it splits Cumberland -- or Fayetteville, it doesn't split it more times than you do, but it keeps Hope Mills totally whole as you did the

surrounding districts up in its neighboring Sampson county.

CHAIRMAN NEWTON: Is that a question or a comment?

SENATOR BLUE: It's a statement. And with that said, unless I'm wrong on that, which I don't believe I am, I would move the adoption of the map.

CHAIRMAN NEWTON: Thank you, Senator Blue.

Senator Hise, any other comments?

CHAIRMAN HISE: I am trying to find, and I don't believe that it's in this pack, the percentage of Fayetteville that is now in the district. It now takes Fayetteville I believe to a 53/47 split between the two districts, as I had said earlier, and makes a district that was a predominant Fayetteville district and kept as much of it as whole as possible to almost an even split between the two, and I see no reason and would not support making that decision.

CHAIRMAN NEWTON: All right. Thank you.

Seeing no other comments or questions, Senator Blue has moved to amend the map

SCH Amendment 2. All those in favor say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN NEWTON: All those opposed say no.

COMMITTEE MEMBERS: No.

CHAIRMAN NEWTON: The nos have it.

Okay. Senator Blue, which is your next?

SENATOR BLUE: Yeah, let me get out of my own way.

CHAIRMAN NEWTON: No worries. Take your time.

SENATOR BLUE: Question of -- I'm going to introduce -- the next one I'm going to introduce is going to be SBK 3 is the number I have. I don't know what the corresponding new number for the amendment is.

CHAIRMAN NEWTON: SBA --

SENATOR BLUE: SBK. SBK 3.

CHAIRMAN NEWTON: SBA Amendment 3.

SENATOR BLUE: Is that it?

CHAIRMAN NEWTON: I don't have an SB 8.

SENATOR BLUE: No. It's -- SBK 3 was my old one.

CHAIRMAN NEWTON: SBA 3. Is this it?

SENATOR BLUE: It's a Wake county map.

CHAIRMAN NEWTON: Members, SCG Amendment 6 we think is the -- Granville and Wake. SCH -- SCH Amendment 6? Sorry.

SENATOR BLUE: SCG Amendment 6, is that it?

CHAIRMAN NEWTON: That's it. I got it.

SENATOR BLUE: Question first of Senator Hise. And it might -- it might help if we could have displayed the map that Senator Hise is defending.

CHAIRMAN NEWTON: So I'll ask staff if we can -- you want a split screen, if we can get that.

SENATOR BLUE: Yes.

CHAIRMAN NEWTON: So, staff, if we can -- if not, you just want Senator Hise --

SENATOR BLUE: Just Wake county portion.

CHAIRMAN NEWTON: Wake county portion.

SENATOR BLUE: With the Wake-Granville county portion of Senator Hise -- that cluster.

There it is.

CHAIRMAN NEWTON: How about that.

SENATOR BLUE: That's perfect.

CHAIRMAN NEWTON: Senator Blue, you have the floor.

SENATOR BLUE: Thank you, Mr. Chairman.

And, Senator Hise, correct me if I'm wrong, and I'll ask you because I can't keep up with all this stuff. In looking at your drawing of Wake county, if I could first go to the Granville-Wake county district.

It looks like in doing those six districts you appear to split ten precincts and split three municipalities; is that right?

CHAIRMAN HISE: I believe that is accurate.

SENATOR BLUE: I think you split Raleigh --

CHAIRMAN HISE: I don't have that report in front of me.

SENATOR BLUE: I think you split Raleigh -- Raleigh, Apex, and Cary, I believe.

CHAIRMAN HISE: Yes.

SENATOR BLUE: And did you find keeping municipalities whole to be of higher importance than splitting VTDs?

CHAIRMAN HISE: There were individual cases in which we felt like we could pick an

individual VTD and as a result not split municipalities, but again, there was no priority on the criteria that ranks one higher than the other.

SENATOR BLUE: Then if you -- so none of them have -- again, and you said this, but I want to make sure I understand it. None of them have necessarily a higher priority. It just depends on the specific district that you're drawing at the time.

CHAIRMAN HISE: And we are showing how we considered each of them in the reports for what the results are.

SENATOR BLUE: Okay. If you will take a look at that protrusion from the green district into the blue district up there, that's from -- I can't see the Raleigh district number. I think it may be -- I don't know what the district is, but there's a protrusion reaching sort of north that extends from the green district into the blue district.

Do you see that?

CHAIRMAN HISE: I see it.

SENATOR BLUE: Okay. If you look at that, tell me why you determined to put that

protrusion in the map as you were drawing it.

CHAIRMAN HISE: As I said when I explained this map, our intent was to connect Granville county with the unincorporated, more rural areas of the northern county. All of drawing this two-county pod was exceptionally difficult compared to the fact that our variance for the district was already at 4.9 percent below the average district, and so we really only had an average variance of about 52 individuals per district. I know you and others that have drawn in Wake county ran into this same complexities in doing so.

And so balancing populations required many more circumstances in which you could not keep VTDs whole and others in doing so in drawing it, but literally this district was drawn starting with Granville county and looking at the northern particularly unincorporated areas of Wake county and adding the two of those into the district and then coming down into the district as was necessary to balance population.

CHAIRMAN NEWTON: Senator Blue.

SENATOR BLUE: Follow-up.

So you chose not to split Raleigh where

it protrudes up into the district, that is, the blue district.

CHAIRMAN HISE: Correct. Well, we can't show it on these. On the map you could put the city limits up and I could better respond to that question, but we -- again, by adding the unincorporated areas and kind of moving down to get towards that equal population number.

SENATOR BLUE: Further question.

CHAIRMAN NEWTON: Question.

SENATOR BLUE: In looking at the stat pack on that district, you did split Raleigh, and you have part of Raleigh into the blue district. And so could you tell me why you chose to put the part of Raleigh to the left of that green protrusion into the blue district and not part of the green since both of them are part of Raleigh's corporate limits.

CHAIRMAN HISE: A specific decision for that choice, I think you're looking at as we were coming south, when you look in the other part of the green area, those seem to be smaller, more compact VTDs, particularly with higher populations that's with coming in. And

so when we're trying to balance populations, as we're getting close, we're looking for the VTDs that closest match that in order to minimize the splitting of VTDs.

CHAIRMAN NEWTON: Follow-up.

SENATOR BLUE: Follow-up.

But you could split one precinct and one VTD and make up for any difference in population.

CHAIRMAN HISE: And that would be an additional split VTD.

SENATOR BLUE: Yes, sir.

Another question.

CHAIRMAN NEWTON: Yes. Follow-up.

SENATOR BLUE: And one of the criteria that you looked at, one of the criteria adopted by the committee was not to split precincts except where it was necessary.

CHAIRMAN HISE: Yeah.

SENATOR BLUE: And that was because when you start splitting precincts, you create a lot of districts for election officials in trying to match up all of these areas with what's in and what's out since we elect on a precinct basis.

CHAIRMAN NEWTON: Senator Blue, I'll just note that you're kind of answering your own question there.

SENATOR BLUE: Thank you, sir. Thank you. I don't mean to answer it, but I think he's going to say yes so I'll state it for him, lead him a little bit, if you will.

So if you had a map that didn't split any precincts and still conformed with all of the other criteria, would that not be a superior map?

CHAIRMAN HISE: Senator Blue, I think -- I don't know if there's a distinction being made. The data in the system is by VTDs. In some areas, those are not consistent with what are called precincts but in others they are and I don't have an answer off the top of my head where those are coming in.

I will tell you with an average variance of 52 individuals, not dividing a VTD in Wake county was a -- considering that your VTD probably minimum size is somewhere around a thousand. If there's many below that, there's not many, that's coming in and having to get districts within 50 people of each other

necessitates the division of VTDs.

CHAIRMAN NEWTON: Follow-up.

SENATOR BLUE: So then -- thank you very much.

So, Senator Hise, I'm going to show you, if you would refer to the map that I have up over there which is before us. It is a map that splits no precincts in Wake county.

Would that not be a superior map based on the criteria? No split precincts.

CHAIRMAN HISE: It would meet the criteria of not splitting VTDs more efficiently, but there are other considerations to consider, including what does it do splitting municipalities, what is the change on that, all the other criteria. I could go through the list, but if you're asking if splitting fewer VTDs meets the criteria better of splitting fewer VTDs, the answer is yes.

CHAIRMAN NEWTON: Follow-up.

SENATOR BLUE: I move the adoption.

CHAIRMAN NEWTON: All right. Senator Blue moves the adoption --

SENATOR NICKEL: Can I ask a question first?

CHAIRMAN HISE: Sure.

CHAIRMAN NEWTON: Senator Nickel, yes.

SENATOR NICKEL: We were talking yesterday about Senator Tillman, and I just wanted to dig up what he said in lead up to my question here.

On the floor of the senate, the last session, he said that this process is --

CHAIRMAN NEWTON: I'm sorry, Senator Nickel. Who is he?

SENATOR NICKEL: Senator -- Republican Senator Jerry Tillman.

CHAIRMAN NEWTON: Okay. He is not serving in this body. Is this relevant to today's discussion?

SENATOR NICKEL: It is to my question.

UNIDENTIFIED SPEAKER: Mr. Chairman, point of order. We had a motion on the floor.

CHAIRMAN NEWTON: You are correct, we do have a motion on the floor.

Do you want to speak to that motion without -- something that is germane to the motion on the floor today?

SENATOR NICKEL: I think we've got another Wake map coming up; is that correct?

Senator Blue, we have a second Wake map? I can give my comments then.

CHAIRMAN NEWTON: All right.

Senator Hise, would you like to make any other comments before we vote?

All right. Those in favor of the motion to adopt SCG Amendment 6 say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN NEWTON: Those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN NEWTON: The nos have it.

Senator Blue, do you know which amendment you'd like to propose next?

SCH Amend-6. SCH Amend-6.

CHAIRMAN HISE: That might be the one that I don't have. There's a lot of Wake county options here.

CHAIRMAN NEWTON: All right. Senator Blue, who's going to be proposing this amendment? The question is Senator Blue is going to be presenting this amendment and he has a question for Senator Hise.

You have the floor, Senator Blue.

SENATOR BLUE: Yeah. Senator Hise, in the last series I asked you about was splitting

VTDs and you said that that was important and probably took precedence over splitting precincts, at least as you drew the Granville-Wake county district; is that correct?

CHAIRMAN HISE: Again, I would make -- I'm assuming on this line of question that the VTDs and the precincts are not aligned in Wake county.

SENATOR BLUE: They pretty much are aligned, they pretty much are.

CHAIRMAN HISE: And as we -- because it's the layer in the system, we have looked at this from the lens of splitting VTDs.

SENATOR BLUE: Okay.

CHAIRMAN NEWTON: Follow-up.

SENATOR BLUE: Follow-up.

You think that splitting -- at least as you made the decision here, you wanted to split as few VTDs as possible in Wake county.

CHAIRMAN HISE: We balanced the criteria between splitting VTDs, municipalities, compactness of districts, all that exists in coming up with these maps.

SENATOR BLUE: And if I were to show you a map that split two municipalities as

opposed to the three that you split in your map and it split only three VTDs as compared with the ten VTDs that you split in your map, would you agree that that's probably a better map using the criteria that the committee adopted?

CHAIRMAN NEWTON: Senator Hise.

CHAIRMAN HISE: Senator Blue, I will actually say on what's being presented, SCH Amendment 6, it is our understanding from the report it splits the same municipalities.

SENATOR BLUE: And let me correct that. That's what I was going to point out to you. It leaves six people in one of the -- I think it's an Apex VTD, but those people could easily be transferred out to a neighboring district and it wouldn't affect the numbers.

So if in fact you split two municipalities versus three and you split only -- and you split only three VTDs, that would be a better map using the committee's criteria.

CHAIRMAN HISE: There are a lot of considerations under those specific areas. I will say that if you -- driving this home, if you split fewer municipalities, you have better

met the criteria for splitting municipalities. If you split fewer precincts or VTDs, you have better met the criteria of meeting VTDs. That does not imply in some manner that the overall has better complied with the map drawing because it met any one particular criteria in a better manner.

CHAIRMAN NEWTON: Senator Blue.

SENATOR BLUE: [Unintelligible] a question again and we'll move on and other folk can ask questions.

But if you improve on both of those, which of the criteria you used to determine how to draw this map, you say these are the important considerations, then it is a better map if it's improved on the other aspects of the criteria.

CHAIRMAN HISE: I would not limit my comment to both. If you meet all of the criteria better, then you have drawn a better map.

SENATOR BLUE: Okay. I'll hold it for a minute. I think Senator Nickel --

CHAIRMAN NEWTON: Senator Nickel.

SENATOR NICKEL: My question is about

the partisan intent of drawing the map. And, you know, I represent Wake county so I know every single precinct here pretty well. I know how they perform. I know where people live and how they vote. And in the last session I know Senator Jerry Tillman, who's not here, but he said "This is set up to be partisan. Do you think we're going to draw Democrat maps? We're doing exactly what you all did for 140 years."

And so my question is about intent. And you know, I'm a lawyer, I was a prosecutor, I'm a defense lawyer. You know, we talk to people and you try to ask them to tell you things that will help with their intent for the fact finder, and it's rare that people will say, "Oh, hey, I did it, I did it."

But the question I have is very specific about Wake county. I know if I wanted to drew two Republican maps, I'd do the top part and then I'd do the bottom part, and that's where the Republicans live, on the top part and on the bottom part.

And so one of the things that's neat about this process, and really boring at the same time, is watching people draw maps. And I

got to watch when you were drawing Wake county, and, you know, you did it and you started at the top with Granville and then you did that weird finger thing and the top part of Wake, and then, instead of drawing other districts, you skipped down to the bottom and you did the Republican district on the bottom.

So my question just is I believe if I were trying to draw two Republican maps, that's the way I would do it, but my question is why did you start at the top and then, instead of doing other districts, skip down to the bottom?

CHAIRMAN NEWTON: Senator Hise.

CHAIRMAN HISE: So I appreciate you giving your intent for drawing several of the other options that are available for us to be considered and for what your intent was. I will say --

SENATOR NICKEL: I didn't draw maps.

CHAIRMAN HISE: -- we began this process in the northern because there is actually a requirement under the Stephenson that when Granville does not meet the criteria of a district in size that it be -- that the county can remain whole and be added to another

district. It so happens in this map that it connects to Wake in the northern area of the county, so we knew that we had to come in and transverse into Wake county on the northern end of the county, that's with coming in. So we completed that district first with the others.

Do I have a propensity to start north? South? East? West? It probably depends more which mood I'm kind of in coming in, and most of my maps I've drawn with the state I've started in the west with coming in. I think it's clear versus the first time I was involved in drawing maps ten years ago where we had data that told us the election results of the top ten districts in every precinct in the state or VTD in the state and how it performed and formed those together for that purpose.

We have not considered any political data in doing this, and to somehow suggest that my knowledge of political data in Wake county, you know, some 250 miles away from where I live, was somehow the basis for why, after drawing the required transversal, I then moved to the bottom of the county it seems to me a little ridiculous.

CHAIRMAN NEWTON: Senator Nickel, do you have a follow-up?

SENATOR NICKEL: I mean, my follow-up is just pretty obvious. You know, all the experts who have commented on these maps call it an extreme partisan gerrymander because there's virtually no other way to draw Wake-Granville to make two districts more favorable for Republicans, and that's what I see here.

And, you know, Senator Blue's amendment would have a community of interest, you know, on the top northwest corner. You know, you see on his map, those folks there have a lot more in common with folks from the east and all the way over to the west side. So for me I see, you know, if we're following criteria with that district, one that makes a lot more sense with the committee's criteria.

CHAIRMAN NEWTON: Senator Nickel, are you moving for the adoption of SCH Amendment 6?

SENATOR NICKEL: No.

CHAIRMAN NEWTON: Senator Blue.

SENATOR BLUE: Mr. Chairman, thank you. And I want to thank Senator Hise for catching the same error in this map that I caught, but it

is my intention to fix that error so that it does have fewer things. So I can end the discussion, but I will fix that error in it, but the point is to show you that we can draw a more efficient map. And I say that because, you know, I'm probably the only person around who has represented every single inch of the geography in Wake county. I've represented this entire county in different forms in senate districts, house districts or the county as a whole.

And I will tell you that for those of us in these urban areas, and it's something that you might really take seriously, we look at ourselves as representing the county, for the most part, and that's the way the county looks at us, especially the business community, that we represent collectively the interests of Wake county, the interests of the state, but these nuances and fine pickings, once we get real communities of interest out of the way, don't really carry the kind of sway. We've got a consolidated school system, so we all -- you know, we work for the same school board. We've got commissioners that are countywide, and so

we -- so we see ourselves as representing the county. So these fine points that you're raising don't register as much here as they do in some of the other areas where you have other entities that are being represented in so many -- you know, if you're representing a senate district, most of you have six or eight school districts and those kinds of things or other cities and towns outside the immediate area that you're in.

But I want to fix this map by putting those six people into a -- so that we're not making another municipal split so that you can see that we can draw a map that still protects all of the interests that the criteria pointed out that we were going to consider and have fewer split municipalities and fewer split VTDs.

So with that said, I will withdraw this map -- and no hurry to get it done. I will just offer it again tomorrow. Okay.

CHAIRMAN NEWTON: Thank you, Senator Blue.

All right. So SCH Amendment 6 has been withdrawn.

What's up next, Senator Blue?

SENATOR BLUE: Senator Marcus.

SENATOR MARCUS: Mr. Chair, I believe we are going to move to Durham and Chatham county now, and that's amendment -- SBVA Amend-2.

CHAIRMAN NEWTON: SBVA Amendment 2.

SENATOR MARCUS: Yeah. I said that A twice. Sorry about that. If staff could have the side-by-side up again, that would be I think most helpful for people following along.

CHAIRMAN NEWTON: All right. Senator Marcus, you have the floor.

SENATOR MARCUS: Shall I let Erika get that other map up before I start.

CHAIRMAN NEWTON: It's up to you.

SENATOR MARCUS: Okay, here we go. Thank you so much.

This amendment that we're submitting here is an amendment that honors the criteria of compactness better than the map that is otherwise drawn here, the Republican map.

So the map that we're offering is the one on the screen to the left compared to the one on the right which is the Republican map. And that one on the right has one very compact

district. You can see it's a tight circle around the center of the city of Durham there, that green area inside all the purple.

And then the other part of this county cluster is not compact at all. It's pretty stretched out. It's oddly shaped. It goes around, it goes over the next two and then under Durham and then picks up all of Chatham county, so it's pretty contorted. It also, this map, unfortunately cuts up some communities of interest.

So the amended map that we're offering here makes two equally compact districts instead, that's the one on the left without any odd shape, and it has a better both Polsby-Popper average compactness score. Ours is a 42 versus the map on the right which is 32. The Reock scores are about the same since when you look at an average of the two they come out to be about the same.

So between these two maps there's no difference in municipality or VTD splits, so we don't have to worry about that, and we're offering this alternative to make both districts compact, for the map to make more sense to the

community, and to improve the compactness of the overall county cluster. So unless there are any questions.

CHAIRMAN NEWTON: Thank you, Senator Marcus.

The chair has two questions for Senator Murdock because she's the most impacted -- just not catching you cold. We talked about this with respect to one other amendment and one other senator as well.

Are you in favor of this amendment?

SENATOR MURDOCK: Yes, I am.

CHAIRMAN NEWTON: And is it your view that it complies with the VRA?

SENATOR MURDOCK: That it complies with the VRA?

CHAIRMAN NEWTON: It complies -- is it your understanding, your view, your belief that it complies with the Voting Rights Act if we take this amendment?

SENATOR MURDOCK: It's my understanding.

CHAIRMAN NEWTON: Okay. Very good.

All right. Anybody else have any questions? Senator Hise?

CHAIRMAN HISE: So, Members, I will just add, in choosing this district was unique. We tried to keep as much of Durham as possible, but Durham is sufficiently too large to be contained in a senate district and -- both in this amendment and the map we had to divide Durham in order to do so, and so I'm actually okay with it.

CHAIRMAN NEWTON: All right.

Senator Marcus, have you moved for the adoption of the amendment?

SENATOR MARCUS: I believe Senator Blue would like to be recognized.

SENATOR BLUE: I just want to make one point, Mr. Chairman. And again, I want to disclaim any expertise in the area, but I just don't see any Voting Rights Act violations in Durham, not that there aren't some and maybe experts can tell you differently, but I know that Senator Murdock indicated to her understanding that it complied with the VRA.

I'd rephrase that to say that I am aware of no violations of the Voting Rights Act that exist in the Durham county redistricting. I think that they just want to do it because it

satisfies some community-of-interest issues, but I'm not aware of any VRA issues in the way that Durham county is -- there may be some other issues. As I said, there may be some issues on gerrymandering still, even though it might not have any effect, but again, that's my lay opinion. That's not an expert opinion.

CHAIRMAN NEWTON: Thank you, Senator Blue.

And is there a motion.

SENATOR MARCUS: I move for the adoption of this amendment.

CHAIRMAN NEWTON: Thank you.

Senator Marcus has moved for the adoption of SBV Amendment 2. All those in favor say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN NEWTON: All those opposed.

All right. The amendment is in fact adopted.

Next up. Who would like to lead the charge on whatever amendment you prefer next?

UNIDENTIFIED SPEAKER: Looks like --

SENATOR BLUE: It's my understanding that there's a Guilford county amendment that's

up next; is that right?

UNIDENTIFIED SPEAKER: Yes.

CHAIRMAN NEWTON: Is that SBV Amendment 3?

SENATOR CLARK: Yes. I'll do that, Mr. Chair.

CHAIRMAN NEWTON: Wait a minute. Hold on. I've got the wrong one there. Let's find the right map. Which one is it?

SCG Amendment 3? Is that the one, SCG?

SENATOR CLARK: I will handle SCG Amendment 3, Mr. Chair.

CHAIRMAN NEWTON: Okay. Thank you, Senator Clark. You have the floor.

SENATOR BLUE: Is it SCG Amendment 1, the one that Senator Lowe has?

SENATOR LOWE: Yes. I have 3.

SENATOR BLUE: Senator Clark just said he has 3.

SENATOR CLARK: I have SCG Amendment 3. That's the one that's on the screen now.

CHAIRMAN NEWTON: Senator Lowe has made the handoff, a good, clean handoff to Senator Clark.

SENATOR CLARK: Okay. Thank you,

Mr. Chair. Thank you, Senator Lowe. Sorry for the confusion there.

But anyway, Mr. Chair, I would like to move that the committee accept this amendment. What it does, it follows one of the criteria that we have established, and that is to give, I guess, relief to the double-bunking of members if we can do so in a reasonable way.

And what this particular amendment does is it essentially changes the orientation of the Senate District 28 and 27 as in the plan put forth by the Senate Republicans by shifting it from a north-south orientation essentially to an east-west orientation, and also it avoids the double-bunking of Senators Robinson and Garrett.

CHAIRMAN NEWTON: Thank you, Senator Clark.

And, Senator Robinson, I do have the same two questions for you that we asked Senator Murdock. Are you in favor of this redraw, this amendment?

SENATOR ROBINSON: Yes, I am.

CHAIRMAN NEWTON: And is it your understanding, belief, view that it complies with the VRA to take this amendment?

SENATOR ROBINSON: Yes. Based on the previous ruling of the courts, yes.

CHAIRMAN NEWTON: Thank you, Senator Robinson.

Senator Blue.

SENATOR BLUE: I make the same observation that I'm certainly not an expert, and I don't think Senator Robinson is holding herself out as one in this area, but I believe that the issue in Guilford county that we wrestle with with these two districts the last time had to do with partisan gerrymandering, and there was a special master appointed who drew what had been earlier VRA district and we complied with the special master's recommendation and that's how we settled the last lawsuit. And so I'm assuming that this configuration doesn't change radically anything that the special master did in District 28. I think that was the number of it when he did it the last time, and that resolved the voting rights issues in that district as well as political gerrymandering issues.

CHAIRMAN NEWTON: Thank you, Senator Blue.

Senator Hise, do you have any comments on the proposed amendment?

CHAIRMAN HISE: No, I think [unintelligible] ...functionally equivalent.

CHAIRMAN NEWTON: Okay. So Senator Hise endorses the amendment as well, and Senator Clark has moved that we adopt SCG Amendment 3.

All those in favor say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN NEWTON: All those opposed.

The amendment is adopted.

All right. Senator Blue, we'll look to you to determine which amendment is up next.

SENATOR BLUE: I think Senator Lowe has -- on the list I got is SCG Amendment 1.

CHAIRMAN NEWTON: All right. Senator Lowe, I think we have the pink SCG Amendment 1 in front of us.

SENATOR LOWE: We do have pink.

CHAIRMAN NEWTON: And you have the floor.

SENATOR LOWE: Just looking at this map, it's a much cleaner-looking map, and I think it can be well seen that it's cleaner and

it gets to the point and it does what the criteria is trying to do. And I certainly submit this map -- submit this amendment unto you.

CHAIRMAN NEWTON: Thank you, Senator Lowe.

Members or Senator Hise, do you have any comments?

CHAIRMAN HISE: Yeah. I would just say, technically, I think this amendment would undo the previous amendment we just did and replace the two-county podding with a different two counties, three districts, replace them with different others. This seems to significantly change, I don't have them on top of it, but where High Point would go as well as what in Greensboro would go and how it was configured and would not support -- especially in light of having just changed it to change it again for the committee, I don't think that's a really good fit.

CHAIRMAN NEWTON: Thank you, Senator Hise.

Senator Blue.

SENATOR BLUE: Thank you, Mr. Chair. I

will simply say that's why they were staged in the order that they were staged.

CHAIRMAN NEWTON: Do you want to --

SENATOR LOWE: I will withdraw.

CHAIRMAN NEWTON: The motion to amend SCGA Amend-1 has been withdrawn.

Members, we're getting very close now. Next map or next amendment.

SENATOR MARCUS: Okay, Mr. Chair, I believe I'm up next.

CHAIRMAN NEWTON: What number?

SENATOR MARCUS: This is SCH Amend-5 for Mecklenburg and Iredell.

CHAIRMAN NEWTON: You have the floor to explain proposed Amendment SCH Amend-5.

SENATOR MARCUS: I'll give staff just a minute to get the side-by-side up. I'll get my papers here.

Okay, thank you so much.

So this amendment concerns the new two-county cluster of Mecklenburg and Iredell counties. As you know, this body must carve those two counties into six districts, trying to keep population as equal as possible and following all the other criteria that this body

has adopted. As the chairs have mentioned several times throughout this process, the criteria are not ranked, rather the criteria are considered co-equal and in the chair's own words should be blended to be fair and to honor all of the criteria whenever possible.

So the Republican map, which is on the left, for this cluster, it fails to meet at least two of the criteria that this committee adopted. First, it has low compactness scores. I'll note that when the chair presented the map, he did not even mention this criteria in his discussion of the map to justify why it's drawn as it was and that he also has emphasized frequently, when he was speaking to Senator Blue earlier, that there should not be any one criteria that trumps all the other criteria, that we should blend them all.

The second reason that this map, as drawn, fails to meet this committee's criteria is that it double-bunks two current members of this body, putting the precinct where I live in a district that is now represented by Senator Sawyer in Iredell county. This double-bunk is especially egregious for two reasons. First, it

takes me across county lines, out of the county in the community where I live and I serve, north Mecklenburg, to tack me into a district that is made up almost entirely of Iredell county. And the second reason is it's the only double-bunk that still exists in this entire state map that could have been avoided.

The members of the Mecklenburg delegation thought that we could do a better job of honoring all of the criteria, so we sat together and we drew this map that is now on the right of your screen which I now offer to you as an amendment.

Our map puts all incumbents in separate districts and is significantly more compact. Our Reock average score is .48 which is 11 points higher than the Republican map which scores only a .37. Our map has a better Polsby-Popper compactness score too. Our score is .39 while the Republican map scores only .32.

At the start of this redistricting process, this committee required all current senators to provide a map which marked with an X exactly where we live. I did that. I hoped that that information would be used to honor the

criteria about considering member residences and the rule that this committee has followed in the past with the court's blessing, I will mention, to avoid pairing incumbents in the same district when it can be avoided with reasonable efforts.

Unfortunately, when I saw the Republican-proposed map, it seemed to me that my information was used for the opposite purpose, since the Republican map double-bunks me, pitting me against one of the few other female members of this body who also happens to be of the opposite political party.

Now, it's true that some incumbents from other parts of the state, including one of the chairs of this committee, ended up in the same district with another member due to the county clustering rules. Those double-bunks were unavoidable, they're not in anyone's control, and they will eliminate some members of this body on a partisan-blind basis. But the double-bunk in Mecklenburg-Iredell that is in this map on your screen now is not necessary and in fact drawing the map that way makes it less compact and therefore less fair on two of the criteria that this committee said it would

follow when drawing maps.

In Common Cause v Lewis, the court approved using reasonable efforts to avoid pairing incumbents in the same district. It is certainly reasonable in this case where the map that avoids pairing incumbents is more compact than the map that double-bunks. Now that you've fixed Guilford county's map, there aren't any other double-bunk members when it can be avoided.

And I'm asking you to treat me and the voters I represent fairly based on their public comment that does not like your map and taking into account all the criteria in a blended way and applying those criteria consistently across all districts.

This map that I'm offering is more fair, it is more compact on both Reock and Polsby-Popper, it splits zero precincts or VTDs, and it allows all current members to remain in separate districts. It's fair, and I ask for your support for this amendment.

I'll pause to see if there's any questions.

CHAIRMAN NEWTON: Thank you,

Senator Marcus.

Senator Hise.

CHAIRMAN HISE: Yeah. I think -- I think there's -- and similar to the proposal the Democrats put forward for how to draw this map that we mentioned earlier, there are some absolute criteria in drawing, and that is that when you have this two-county pod, Iredell county must be kept whole, Mecklenburg is divided, and so it is a narrow region in the northern part of Mecklenburg county where you cross into Mecklenburg and are required to transverse into Mecklenburg.

It does not seem unreasonable to find that the most north municipality in Davidson would be wholly contained in that district when it could be wholly contained in that district versus the options in this. I think it's about a 60/40 split of Davidson coming in and intentionally splits that for the criteria that says we may consider members' addresses in drawing maps.

So I think it is the most -- I'll also say that it is really a misrepresentation of the scores for compactness to average six scores

together and compare the averages of those scores. With coming in, that's not how they were designed, and so trying to take six separate circles and the percentage that fills the circle and somehow averaging that over six circles and making conclusions from that misses a lot of variance that's not included in that, but I know I digress on that, but by comparison of what you may look specifically at what district 37 does -- I don't have those in front of me. It seems to what is being changed specifically in this map, but I am not inclined to support this amendment.

CHAIRMAN NEWTON: Thank you, Senator Hise.

Senator Marcus.

SENATOR MARCUS: Could I make a comment?

CHAIRMAN NEWTON: Yes.

SENATOR MARCUS: Thank you, Mr. Chair.

I will just respond to that by saying it sounds to me like Senator Hise is saying that he didn't like the way we're taking an average compactness score on both and that therefore, what, would should -- there's no other way to

assess that. We should just not use compactness in this cluster? I mean, the statistics I showed you are average compactness scores for the cluster on my map and on the Republican map. And so I hope we all agree that compactness is a criteria that this committee adopted and is definitely relevant here as is consideration of member residences which is a criteria you've taken into account in every other district that we've drawn for the whole state.

And so I'm just asking you to consider both of those when you look at this map and find that it is more fair -- my amended map is more fair and meets more of the criteria better than your map.

CHAIRMAN NEWTON: Thank you for your comment, Senator Marcus.

Other questions, comments. Is there a -- Senator Daniel.

SENATOR DANIEL: I mean, I guess, if I could, I would like to ask Senator Marcus a question.

CHAIRMAN NEWTON: Senator Marcus, will you stand for a question?

SENATOR MARCUS: Sure.

SENATOR DANIEL: Do you consider Davidson a community of interest?

SENATOR MARCUS: I do. And you know, this is painful to put up a map that has to split my municipality. I didn't want to do that. It certainly wasn't my first choice the way it seems to be Senator Hise's first choice to put Davidson with Iredell. I heard from so many -- so many people who live in Davidson that don't want to be moved into the much more rural area outside of our county, but there's no other way to draw this map.

You're splitting Davidson as well, I'll point out, going over into Cabarrus county. I know you say that doesn't count, but that's also a split of Davidson. Davidson is an oddly shaped municipality, and I will note that in other cases you specifically took into account the oddly shaped municipality to split some VTDs to make it work there.

So I know that the people of Davidson feel very much part of north Mecklenburg. That is how we refer to ourselves. That's the area where we shop and go to church and go to school. And so at least my map allows some of Davidson

to stay with north Mecklenburg.

CHAIRMAN NEWTON: Senator Daniel, you good?

SENATOR DANIEL: No follow-up.

CHAIRMAN NEWTON: Okay. Any other comments, questions?

Senator Nickel.

SENATOR NICKEL: Yeah. You know, I just want to say I think, you know, if we reject this amendment, you're ending Senator Marcus's career in the senate, and I just -- I hope that this committee and the chairs will continue to meet with Senator Marcus and the members of the Mecklenburg delegation about this issue. We're not done yet, we're not at the floor, and I think the way we address this is going to determine how we proceed as a body. And I hope -- I hope there's a way to find a solution here that follows the committee criteria and allows folks to have a real choice here.

So I know where this is going, I believe, but I truly, truly hope that, you know, the conversation can continue here because I have been with Senator Marcus here since I got here and seen how hard she works every day to

represent her constituents.

CHAIRMAN NEWTON: Thanks, Senator Nickel.

Senator Lowe, do you have a comment or are you good?

SENATOR LOWE: Yes. As I look at this amendment, I am really hoping that there is a way that given the criteria that is given that we can make the necessary adjustments so that we don't have these two senators double-bunked. I think that there is a way. As a matter of fact, I know there is a way. If we put our heads to it, we can figure this one out, and I'm hoping that we'll do everything that is necessary, hopefully in this meeting, to figure this out so that we don't have a two of our members double-bunked. I think it's important to the work that we're doing to figure this one out.

CHAIRMAN NEWTON: Thank you, Senator Lowe.

Any other comments, questions?

SENATOR BLUE: One here, Mr. Chairman.

CHAIRMAN NEWTON: Senator Blue.

SENATOR BLUE: Yeah, and I would simply say that there is precedent for what

Senator Marcus is asking for. In the dialogue between Senator Hise and me a little bit earlier, I think I pointed out to him that decisions are made to split townships or not split -- not townships. I'm sorry. -- towns, municipalities, and we've done it in Sampson county, putting it together, but yet we come to Cumberland county and we split Hope Mills, a town which I'm very familiar, they still stay in the same cluster, and that's in effect what you would be doing here. Yeah, you come down from the north, which is what Granville did to Wake county, came down from the north, and you decided to take a radical left turn. That's strange, but you took a left turn when you could have taken a right turn coming down in Wake county from Granville. Took a left turn to go over to Zebulon and in that area.

And here you're coming down, you got these four, five precincts across the top -- or towns across the top of Mecklenburg county, you can come down the -- as I look at it, the left edge from here and allow this split in that city just like you did in Hope Mills. And that's what I was trying to get at. If none of the

criteria trumps the other, that is, if none is more important than the other criteria and you got eight or ten criteria, none is more important than any other criteria and you got eight of them, you've shown that you're willing to elevate one to a higher level depending on what you're trying to achieve.

So there's no reason not to split Davidson, it's still got the same group of people representing it, and you can do it within these other five districts in Mecklenburg county in that cluster without -- you can accommodate the question of members who already occupy this body. That's why you put it in as one of the considerations, one of the criteria.

And as I told you privately, I'll tell you publicly, I appreciate the efforts that the three of you have made to unbunk Democrats because we're the ones in the urban areas who ended up being double-bunked. You did it in the case of Wake county. You did it in one instance in the case of Mecklenburg county. You did it in Guilford county. You may have done it somewhere else, but you've done it in the places where we ended up double-bunked.

Certainly, you didn't have to split municipalities or anything like that, you can shift things around, but again, this is a case where you can do some of the things that you've done in other districts and observe that criterion in this decision.

Again, as Senator Nickel said, there are ways you can do it and still preserve the efforts that you've made in the rest of this map, and you know you can in southern Mecklenburg county still preserve the effort that you've made down there, but not just end up in this being the single double-bunk where you could do something about that you didn't do something about.

CHAIRMAN NEWTON: Senator Blue and Members, in the discretion of the chair, I'm going to recommend that we displace this amendment. Let's get our heads together. I will -- I will point out, just for fun, the humor in the fact that I think Senator Marcus championed an amendment to remove consideration of members' residences from the criteria, but that's okay, that was yesterday. Today's today. And why don't we displace this and we'll spend a

little time seeing if we can find a solution.

All right. Thank you. Next amendment.

SENATOR MARCUS: Mr. Chair, can I just set the record straight on that since you represented what I said.

This caucus, not me, did put forward an amendment when we were adopting these criteria to say let's not consider anybody's residence, to be fair, and the committee turned that down. They said, no, no, we want to consider member residence. So my amendment, for the record, was to say let's be fair and make sure that we use that data for everyone to not double-bunk.

CHAIRMAN NEWTON: Thank you, Senator Marcus.

SENATOR MARCUS: And you turned that amendment down. So we are where we are for exactly that reason. I don't think I've been inconsistent. I'm trying to be consistent and honest. Obviously, I have feelings about this, and I hope you'll forgive me for being a little bit emotional about it, but I don't want you to misrepresent or suggest that I've been inconsistent in how I feel about this issue.

CHAIRMAN NEWTON: Thank you,

Senator Marcus.

SENATOR MARCUS: And I'll be happy to displace this for today.

CHAIRMAN NEWTON: Thank you.

Senator Blue, what's the next amendment?

SENATOR BLUE: Since this one is displaced, Mr. Chair, I have I think one other amendment, and I'll be very brief on that. That's SBK 4. It's a VRA district based in Wilson county.

CHAIRMAN NEWTON: I don't have that nomenclature before me.

SENATOR BLUE: Let's see.

SENATOR MARCUS: Senator Blue, I believe it's SCH Amend-7.

SENATOR BLUE: Okay. I've got it here. SBA Amend-3.

CHAIRMAN NEWTON: Okay, got it.

So, Members, it's SBA Amend-3.

SENATOR MARCUS: I'm sorry.

CHAIRMAN NEWTON: Members found that map, we're good to go. The map's up on the screen.

Senator Blue, you have the floor.

SENATOR BLUE: Is that it?

CHAIRMAN NEWTON: Vance. That is not -- that is not it.

SENATOR BLUE: That's not it.

CHAIRMAN NEWTON: How about to the left there. Yeah.

SENATOR BLUE: Yeah, that's it, that's it. I'm looking at the wrong one.

I won't repeat everything I said about a VRA district, but this was one of the originally created VRA senate districts, and it stayed in place through 2011. I think it was created in the -- in 2003 with the whole county provision applicable, and this body redid it in 2011, and Senator Angela Bryant was representing various portions of it.

The only thing I've done here -- and again, this is a solution to a problem before it becomes a problem. The only thing I've done is take districts whatever it was beforehand, but as to Wilson, Nash, Edgecombe area, and it starts up in Vance county, comes down to Franklin, then through Nash. It takes those two clusters -- there are two clusters. It takes those two clusters and it combines them because

you can create the functioning VRA district without going through the exercise of the original VRA district which had Wilson, Nash, Edgecombe, Northampton -- I think Northampton, but Halifax and Warren and maybe even Vance, but it went into all of those counties.

And its configuration after Rucho -- or as a result of Rucho was Wilson -- Wilson, Halifax, and Edgecombe, those three counties, and it met the requirements of a VRA district as it was intended to be. And once it got thrown into this new cluster that it was thrown into, it dissolves that VRA district. And as I said earlier, Stephenson can't in and of itself dissolve a VRA district. You've got to make the study. It, too, was one of the districts pointed out by those who were telling you some problem areas and it showed the statistics.

What this would do is preserve that district and it would combine those two districts so that the remaining district -- again, just as with my first formulation over in the northeast, it would combine the districts, and the remaining district would be the second district of those two. It would still be three

counties. It wouldn't cause any other configurations under the Stephenson criteria because you will have created a VRA district and then you are left with three counties from that VRA district -- from creating that VRA district just as it is going into it. So it's a three-county cluster. It would still be a three-county cluster. The cluster around it would still be a two-county cluster, and this would be a cluster going into three or four counties, but it would be a VRA district so it wouldn't count against that, and it solves a problem before you have to address it in any other proceeding win or lose. It gives you certainty through this decade, and it doesn't do any harm to the other stuff that you've come up with cluster-wise or any other way. So I offer it to you for your consideration and move its adoption.

CHAIRMAN NEWTON: Thank you, Senator Blue.

And before we take up the motion, Senator Hise.

CHAIRMAN HISE: Thank you, Mr. Chairman.

I guess I want to point out that this fails to create a two-county pod for Edgecombe and Pitt, a three-county pod for Wilson, Greene, and Wayne, and a three-county pod for Vance, Franklin, and Nash, and instead creates an eight-county pod that it divides among three members. No evidence to suggest that that is required that I have seen before you bypass the entire podding and destroy three pods.

Even if I accepted that, I do not -- the challenges of why Edgecombe would be divided seems to make no sense to me when Edgecombe and Pitt form a two-county pod already, and so you've got this small, little blip that was divided just because.

But trying to get into those, I think that the request here is to throw out the Stephenson poddings of a two-county pod and two, three-county pods and instead make that an eight-county pod and divide it among three districts, splitting all those counties and others.

They claim that -- the claim is being made that there are some VRA requirement that has to do so. I refer everyone to the statement

we've made earlier today that we don't see that, and I think it would be a tremendous mistake for us to go this far in violating all the pods and others in order to accommodate with certain other people's opinions of what's required of us.

CHAIRMAN NEWTON: Thank you, Senator Hise.

Senator Blue, comment.

SENATOR BLUE: Just to be clear, Stephenson says you first draw the VRA districts. That's an instruction to the General Assembly. Nobody disputes that. That is the first thing that the opinion says that you do. It says first draw the VRA districts.

After you draw the VRA districts, then you group counties, those that can be separate in and of themselves, a single-member district, you do that. Those that contain within themselves a concrete number of districts, then you do that. So you get Wake -- you used to get Wake and Mecklenburg, and that's how you got Onslow.

Then it says after -- after you do the VRA district, you do the clustering. After I've

done this proposed VRA district, the clustering is still the Pitt-Edgecombe cluster. That's the cluster. That's a two-county cluster because it disregarded what you did to draw the VRA district. The cluster is still Nash, Wilson, and Wayne, a three-county cluster which is what it is now. So those are the clusters that you draw after you've drawn the VRA district.

And that's what Stephenson says you do, no difference than what you did when you started initially. You just didn't recognize the obligation to do a VRA district. That's all this does. It doesn't make an eight-county super cluster. You haven't -- remember, you haven't done the clusters when you do the VRA district. You do the clustering afterwards, and that's why it leaves these counties intact. You don't -- you're still observing the clustering mandate.

Remember, the whole theory behind Stephenson was that you harmonized the whole county provision with -- and that's the language from the case, you harmonize it with federal law, which is what I just tried to do, and that's what I was pointing out to you. It does

not create an eight-county super cluster.

CHAIRMAN NEWTON: Thank you, Senator Blue.

Seeing no other comments or questions, Senator Blue has moved for the adoption of SBA Amendment 3. All those in favor say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN NEWTON: Those opposed no.

COMMITTEE MEMBERS: No.

CHAIRMAN NEWTON: The nos have it, so we will not be amending the map.

All right. So I know Senator Blue said that was his last amendment, but I do have a couple other maps here. I don't know if somebody else moving for those amendments, or are those withdrawn at this point? I've got SBVA Amend-3 and SCHA Amend-7.

SENATOR BLUE: SCH -- I pulled back SCH 10 Amend-7 because you said you're going to set the discussion that Senator Marcus was having aside.

CHAIRMAN NEWTON: 3 and 7.

SENATOR BLUE: Yeah. So it wouldn't be appropriate to do that one until I see how that's resolved.

CHAIRMAN NEWTON: So that takes care of 7. And then so I still --

SENATOR BLUE: And we're pulling back on 3.

CHAIRMAN NEWTON: You're pulling back on 3 as well? Okay.

So that is all the amendments. Am I missing anything? That's all the amendments you wanted to offer today.

SENATOR BLUE: I think it is. It's all that I have. I don't know whether some other members have other amendments.

CHAIRMAN NEWTON: Okay. I want to make the committee aware that we will be having a committee meeting tomorrow. The time is TBD because I think it's dependent on some work the House is doing, but I wanted to put that on your radar. As soon as we know the schedule, we will certainly let you know.

And I'd like to stand at east for just five minutes or less here. The chairs need to caucus a second.

SENATOR BLUE: Can I do one thing before you go at ease --

CHAIRMAN NEWTON: Sure.

SENATOR BLUE: -- to make sure that the -- so the staff knows where we're going.

Again, and I appreciate publicly the effort that the three chairs made with respect to not unnecessarily changing district numbers in the same counties, and I acknowledge that, and I certainly appreciate it for those members in these counties who are returning who order their supplies in great quantities -- in great quantities so that you'll save some trees. And I'm sure that Senator Hise recognizes that from the western part of the state where they just cut down Christmas trees.

But so that the staff will understand, in case there's a need for them to renumber whatever the final districts are within your map where you've changed, and we won't be rushed to do it, if you could sort of give them some direction in that regard. I know you changed mine in the ones in Wake county, but I didn't know whether there were others where you had made those kinds of --

CHAIRMAN NEWTON: Thank you, Senator Blue. The staff's got that on their radar.

ERIKA CHURCHILL: Mr. Chair, if I might, we're happy to engross today's amendments into an underlying map if y'all will give us a couple of hours and then we can reopen the drawing room if Senator Blue and the chairs would like to come in and instruct us how to renumber.

CHAIRMAN NEWTON: All right. Let us caucus here for just a moment. Thanks.

[At ease.]

CHAIRMAN NEWTON: I'll start with just a little housekeeping. The chairs have discussed with Senator Blue the best mechanism for -- if we can come to agreement to cure the double-bunk that Senator Marcus has, we can do that as a floor amendment, so we're going to proceed today to vote out the map as amended with any changes thereto either being technical which we're going to give the staff the ability to make at the direction of the chairs or it can be done on the floor.

And with that, Senator Hise has a motion.

CHAIRMAN HISE: Thank you, Mr. Chairman.

I move for a favorable report to Senate Bill 737 as amended rolled into a new PCS with leave for staff to make technical and informing changes inclusive of the numbering of districts as technical, unfavorable to the original bill on the direction of the chairs.

CHAIRMAN NEWTON: That is well done, Senator Hise.

Any comments, questions? Good.

All those in favor --

SENATOR BLUE: One --

CHAIRMAN NEWTON: Senator Blue, of course. I should have known.

SENATOR BLUE: No. No. I want to make a statement so the record is clear.

I was iterating the different versions of Edmisten, and the second iteration was Gingles versus Thornburg.

CHAIRMAN NEWTON: Thank you so much for that clarification to the record.

All those in favor of the motion say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN NEWTON: Those opposed.

The ayes have it. And so the motion

that's been adopted is unfavorable to the original bill, favorable to the bill as amended rolled into a new Proposed Committee Substitute with a favorable report to the committee substitute and to make technical changes which include renumbering of districts under the direction of the chairs, and with that we stand adjourned. Thank you.

NCLCV v. Hall
21 CVS 15426
LDTX082

(Transcription from YouTube started at 6:57.)

CHAIRMAN HISE: ... Rod Fuller, Mike Harris, behind me, Charles Marsalis, he's over here, and Linda Matthews. I saw her in the back. Thank you all for being here today.

Welcome back to the Senate Redistricting Committee. I wanted to start off by thanking members of the public who came out to our 13 public hearings held across the state last month. There were a number of constructive and useful suggestions made throughout the process as the committee will be able to better respond to the concerns of North Carolinians as a result of hearing that feedback.

I also want to thank the members of the committee who were able to attend those meetings to hear from our constituents. Finally, and probably most importantly, I thank our staff and our sergeant-at-arms and General Assembly police for helping make that process run as smoothly as possible.

What we're here to do today is to begin the map-drawing process. In doing so, it will be important for this committee to understand

the county groupings to be used in the 2021 Senate plan. As the criteria this committee adopted several weeks ago say, we will use state constitutional standards as interpreted by the North Carolina Supreme Court in Stephenson I, Stephenson II, Dickson I, and Dickson II to create these county groupings. These decisions specify the procedure for how the county grouping process works to give effect to the state's constitutional whole county provision and the one person, one vote principle.

I won't recite verbatim what those decisions say, but in layman terms, this means the county population will be used to identify the maximum number of single-county districts that can either support one or multiple legislative districts. Next we will find -- after that is completed, you will find the maximum number of two-county districts that will support one or multiple districts that don't landlock parts of the state without a district, then to three, then to four and so on through the process until no more counties are allowed to be grouped.

So in a moment, we'll hear from our

nonpartisan staff about the different options that are available for county groupings and how they comply with the state constitution and the Stephenson decisions. I want to emphasize that the chairs believe that there are multiple options for grouping counties in a way that is legally compliant.

This committee will consider maps that use the constitutionally compliant county groupings as our adopted criteria require us to do. Maps that do not use legal county groupings will not be considered by this committee.

I will now ask Erika Churchill to explain the county grouping options for the 2021 senate plans. And I think they have passed out the packet of 16 plus a blank map that's for coming in with some other information.

Does everyone have that? It appears everyone has it, Erika.

ERIKA CHURCHILL: Very good. So we're going to be looking at it on the screen as well.

CHAIRMAN HISE: Senator Clark, if you can just --

SENATOR CLARK: How do we introduce additional constitutionally compliant cluster

maps into the process?

CHAIRMAN HISE: Anything you'd like to -- anything will be open for you to draw or consider what you want. She's getting ready to present what we think the options are for constitutionally compliant maps, those kind of things, so those will be open for anyone, but I'm going to let her finish her presentation and we'll go through some questions.

SENATOR CLARK: Thank you, Mr. Chair.

ERIKA CHURCHILL: Okay. Jessica and I are going to walk through this the best we understand it.

So we were asked to start with a paper entitled North Carolina General Assembly County Clusterings from the 2020 Census. It was written by Christopher Cooper, Blake Esselstyn, Gregory Herschlag, Jonathan Mattingly, and Rebecca Tippett, and is available on the Duke University website Quantifying Gerrymandering, which is a nonpartisan research group centered at Duke Math. To the best of my knowledge, the post that released this was posted on August 17th of this year.

So they started with trying to

determine, as Senator Hise mentioned, what are all the single-county clusters, meaning a county that is within a population range of plus or minus 5 percent deviation off of the ideal deviation for a Senate district. The ideal population for a Senate district for the 2020 decade is 208,788 people according to the federal decennial census, with a plus or minus range, that means a range of 198,348 people to 219,227 people.

So in starting their process, this group determined that there are 17 clusters containing 36 of the 50 districts that are fixed based on determining optimal county clusters. They are represented by the colored county groupings in the map that you have before you that are crosshatched. This will stay static throughout the presentation. There are 16 additional maps of how the counties in white can be grouped for the remaining 14 districts.

For the fixed districts, 10 of these contain a one single-member district, meaning that 10 of the 50 Senate districts would be fixed under this particular configuration. Those would be District P in Onslow county;

District L, which is Beaufort, Craven, and Lenoir; District N, which is Edgecombe and Pitt; District Q, which is Wilson, Greene, and Wayne; District J, which is Johnston; District I, which is Nash, Franklin, and Vance; District H, which is Person, Caswell, and Orange; and District O, which is Davidson and Davie; District K, which is Rowan and Stanly; District M, which is Hoke, Scotland, and Robeson.

The remainder of the groupings would be multi-member groupings, which means they would have to eventually be divided into single-member districts within that plus or minus 5 percent ideal range for a single member.

So now comes the interesting part.

JESSICA SAMMONS: So what we did was take the available options from those groupings that were in white from that first map that was on the screen and in your packet, and according to this group, there are multiple configurations that those counties could be grouped into, and so we created this chart of the different configurations.

For each of the groups in white, you'll see that there's kind of four distinct groupings

in white on that first page, one involving Buncombe county to the west, one involving Wilkes, Yadkin, Surry, Stokes, Forsyth, Alexander, one to the southeast, and then one to the east and northeast up at the top.

ERIKA CHURCHILL: I will jump in and note, starting with our western grouping, including Buncombe, this is sufficient population for five single-member Senate districts.

For that northwestern corner with the Wilkes-Surry-Forsyth area, that is sufficient for three single-member districts.

For this southeastern corner with Brunswick, New Hanover, Pender in it, that is sufficient for four single-member districts.

And starting with Caldwell, Pamlico and all the way back over to Warren in the northeast corner, that is sufficient for two single-member districts.

JESSICA SAMMONS: So what we did is we took the options that were in the article Erika mentioned from Duke, at Math, that Quantifying Gerrymandering group, and they had two different options for each of those white areas from the

first page. And we basically did all the configurations and came up with 16 different maps. And what we're going to do now is just roll through all 16 of them.

This first one, as you can see, fills in all those white spaces with one of the available options.

ERIKA CHURCHILL: And I would note for each of these, remember, the crosshatching is the fixed area from the Duke report.

The second thing that I would note is when you see the, like R2, which is Buncombe, McDowell, and Burke on Duke Senate 01, the "2" means that is a two-member district. When you see T1, which is Henderson, Polk, and Rutherford, that means that is a single-member district.

JESSICA SAMMONS: So explaining this map, you will see that here for Grouping R, that includes Buncombe, McDowell and Burke grouped together; Henderson, Polk, Rutherford grouped together; Lincoln, Gaston, Cleveland grouped together; and then move up to that second grouping, Wilkes, Alexander, Surry, Yadkin grouped together; Surry and Stokes -- Stokes and

Forsyth grouped together; and then over in the southeast, Harnett, Lee, Sampson, Duplin, Jones, Pender, New Hanover grouped together; Bladen, Columbus, and Brunswick grouped together; and then over to the east and northeast, Pamlico, Craven, Hyde, Dare, Washington, Chowan, Perquimans, and Pasquotank grouped together; and then the remaining of those eastern -- northeastern counties grouped together.

ERIKA CHURCHILL: As we scroll through these, you will notice that you see a variation on a theme. There will be one district -- or one area of the four that will be changed in each one of these. The remainder will remain the same from a previous version. So it is simply the configurations of how these four areas of the state could potentially be broken down in two different ways and then reconfigured with the rest of the state that can also be broken down in two different ways.

So we're happy to scroll through these and read through each of the counties and each of the groupings, if the chair would like.

CHAIRMAN HISE: Yeah.

JESSICA SAMMONS: Okay. So In the

second map, you have -- looking back over at the west, you have a grouping of Buncombe and McDowell and Burke; you have a grouping of Henderson, Polk, and Rutherford; a grouping of Cleveland, Lincoln, and Gaston. To a little bit northeast of that, you've got Wilkes, Alexander, Yadkin, and Surry grouped together; Stokes and Forsyth grouped together. Down to the southeast, Buncombe, Columbus, and Bladen grouped together; and then Lee, Harnett, Duplin, Jones, Sampson, Pender, New Hanover grouped together. And Then moving over to the east, you have Warren, Halifax, Martin, Washington, Chowan, Hyde, Pamlico, and Carteret grouped together; and then the remainder would be in a grouping by themselves.

ERIKA CHURCHILL: For Duke Senate 3 --

UNIDENTIFIED SPEAKER: Mr. Chair.

ERIKA CHURCHILL: -- back over in the west, Buncombe, McDowell, and Burke would still be grouped together for a two-member district.

CHAIRMAN HISE: Excuse me for a second.

Senator Marcus.

SENATOR MARCUS: Sorry, Erika, to interrupt you. I think it would help me if you

could maybe point out, as you're going through these, which section of it is different from the map before. I don't know if that's what everybody else was doing, but I'm flipping back and forth between the one we just talked about and then the next one. So maybe if you could, you know, obviously do as the chair's requested, but if you could also mention where the change is so our eyes could go there first, I think that would be helpful.

ERIKA CHURCHILL: So the first of these series --

JESSICA SAMMONS: The first four -- the first eight.

ERIKA CHURCHILL: -- the first eight of these we're going to go through --

JESSICA SAMMONS: It's the same.

ERIKA CHURCHILL: -- the western part of the state, the Buncombe-McDowell-Burke trio, the Henderson-Polk-Rutherford trio, and the Cleveland-Lincoln-Gaston trio will not change for the first eight maps.

For the first four of these maps, that Forsyth-Stokes combination, with the Wilkes-Alexander-Surry-Yadkin combination, also

will not change for the first four. The changes will be in the eastern part of the state.

CHAIRMAN HISE: It may just be simplest if you focus on each of the four grand pod areas and show what are the two options for that area, holding everything else in the state kind of consistent. That might --

ERIKA CHURCHILL: Great idea.

So starting with Duke Senate 3, let's look at the southeastern portion of the state. One option is what is now will be labeled District X. It would have two members. It would be Columbus, Brunswick, and New Hanover. And then the remainder of that southeastern portion would be Lee, Harnett, Sampson, Duplin, Jones, Pender, and Bladen with two members as well. If you want to;

JESSICA SAMMONS: Page 18.

ERIKA CHURCHILL: I'll go back up. Oops, went too far. If you will back up to Duke Senate 01, that same area -- sorry. I was trying to get to 2.

To Duke Senate 02, that same area of the state, that southeastern corner, can be broken down differently. District X would be

Lee, Harnett, Sampson, Duplin, Jones, Pender, and New Hanover, and it would be population sufficient to support three single-member Senate districts. The remainder, District Y as labeled, would be Bladen, Columbus, and Brunswick, and it would be a single-member Senate district.

Again, staying in the eastern part of the state, staying with Duke Senate 02, that northeastern corner, one option would be to combine Warren, Halifax, Martin, Chowan, Washington, Hyde, Pamlico, and Carteret for a single-member district, and to combine Northampton, Hertford, Bertie, Gates, Perquimans, Pasquotank, Camden, Currituck, Dare, and Tyrrell for a single-member district.

JESSICA SAMMONS: Go back one. 3, go to page 3.

ERIKA CHURCHILL: The other option in that northeastern corner will be to combine Carteret, Pamlico, Hyde, Dare, Washington, Chowan, Perquimans, and Pasquotank for a single-member Senate district, and for Warren, Halifax, Northampton, Hertford, Bertie, Martin, Tyrrell, Gates, Camden, and Currituck to be

combined for a single-member Senate district.

JESSICA SAMMONS: You need to go to Map 9.

ERIKA CHURCHILL: Skipping ahead to Duke Senate 09, the -- well, let's back up to Duke 08 for a second just to look at that southwestern area one more time.

Option 1 would be Buncombe, McDowell, and Burke for a two-member Senate district; Rutherford, Polk, and Henderson for a single-member Senate district; Lincoln, Gaston, and Cleveland for a two-member Senate district.

The other option in that southwestern corner would be to combine Buncombe, Henderson, and Polk for a two-member Senate district; McDowell, Rutherford, and Cleveland for a single-member Senate district; and Burke, Lincoln, and Gaston for a two-member Senate district.

Moving to that northwestern corner or area, the first option would be to combine Forsyth and Stokes for a two-member Senate district; and Surry, Wilkes, Yakin, and Alexander for a single-member Senate district.

JESSICA SAMMONS: Go back one.

ERIKA CHURCHILL: The other option in that northwestern corner will be to combine Forsyth and Yakin for a two-member Senate district; and Stokes, Surry, Wilkes, and Alexander for a single-member Senate district.

CHAIRMAN HISE: Members, I will take a moment now to see if there are any questions. As I summarize this, there are four areas of the state where the podding, for example, in the west, will contain three three-county pods. There are two options for what counties cluster together for those three. So with four areas in the state, two options in each, that will give you a total of 16 possibilities that could be selected for a map.

Staff's here and we'll continue to -- and I will answer any questions you may have. If you will please direct your questions to the chair.

Senator Blue.

SENATOR BLUE: Thank you, Mr. Chair.

It might be that the staff can answer this, but I'll ask you directly because I have the greatest amount of respect for Mattingly, Tippett and the various others that you talked

about who were involved in this project. And maybe staff knows, but do you know whether or not, in drawing these initial maps, what the total criteria was? You say the Stephenson criteria. I didn't hear you mention some of the lawyers who would have interacted in this to determine whether in their laying out these maps they looked at first Stephenson criteria which is that Voting Rights district requirement -- Voting Rights Act requirements.

And so do you know whether they factored in that initial criteria in Stephenson in drawing these maps or they just did it on population and the Stephenson criteria generally on the whole county?

ERIKA CHURCHILL: Senator Blue, I'm going to read directly from their --

SENATOR BLUE: Okay. That would be helpful.

Erika CHURCHILL: -- work because I'm not really sure other than to read directly from what they said. And this is in the very first paragraph.

"However, there are often multiple county clusterings that minimize county

splitting." And it has links to two different blogs.

"The release of the 2020 census data allows us to determine the possible county clusterings for both North Carolina State House and State Senate redistricting processes. The one part of Stephenson v Bartlett which this analysis does not reflect is compliance with the Voting Rights Act. To determine the county clusters, we use the implementation of the court-ordered procedure described in Cater, et al., which has a reference to optimal legislative county clustering in North Carolina.

"Daniel Carter, Zach Hunter, Dan Teague, Gregory Herschlag, and John Mattingly, Statistics and Public Policy, Volume 7, 2020."

SENATOR BLUE: Follow-up.

CHAIRMAN HISE: Follow-up.

SENATOR BLUE: And the reason that I mentioned that is that Tippett is an absolute asset to the state and her population center, whatever the name of it is, over at Chapel Hill, and she projects those numbers and understands them as well if not better than anybody else in the state. And so she's a -- I want to say

cartographer, whatever the term is that describes those who study population and create maps based on it.

Mattingly, on the other hand, is, again, public policy, statistician, and a great one at that, a mathematician/statistician, but it seems to me that if they are saying that they have not done the first thing in the Stephenson requirements, then these clusters would be suspect until that kind of determination is made.

And I say all of this, Mr. Chairman, because I've lived through this -- those eastern counties, and again, it's totally an exercise in academics to talk about anything initially other than the 42 eastern counties plus two or three urban counties that were involved in the Section 5 formulation of the Voting Rights Act.

In the 80s, in the litigation, it was a determination not by the legislature, but by the courts that they were going to basically nullify the maps in the Gingles case because of that. And since they were able to penetrate two or three urban areas, Cumberland, Mecklenburg, and Gilford, they were able to impose a broad

standard across the state with all of the urban areas.

And In the 90s, they determined that they would not just take the Section 5 issues but they would impose Section 2 issues across the state. That's why you got the weird district from Gastonia to Durham, congressional district. But they cleaned it up, and then Stephenson came along in the first part of this century, the Stephenson case, and imposed the whole county provision on it, but recognized the jurisprudence that it evolved over the prior 20 years under the Voting Rights Act.

And So that's why I think Stephenson said the first thing you got to do, since state law doesn't trump federal law, is try to figure out how you comply with the Voting Rights Act as you do clusters and as you do districts.

Now, I go back again to the fact that Cumberland, Mecklenburg, and Gilford are outside that range now, so you're really narrowing it again to the areas up in eastern and northeastern North Carolina which got us on this treadmill in the first place.

And if there's been no analysis made to

whether or not there's going be compliance of the Voting Rights Act, then we're setting ourselves up again perfectly to sort of lead with the chin and be the poster child for redistricting nationally that gets struck down in this decade.

And so I asked you, since you -- staff pointed out that they made that an exception to their maps, can we do legitimate maps without a constitutional -- without seeing what the constitutional requirement is?

CHAIRMAN HISE: I don't know if you want to respond to that or not.

So the response I will give to the question is we believe that constitutionally compliant maps can be presented under the Voting Rights Act under these county clusters. As much as we are required to -- what's remaining of the Voting Rights Act to comply, we will comply and believe it can be done within these existing clusters. I see them as two separate things. We must comply with federal law, we must comply with state law, and within these clusters, we believe there is the option for doing both.

SENATOR BLUE: Could I follow-up,

Mr. Chairman.

CHAIRMAN HISE: You may.

SENATOR BLUE: Because I want to do that, but how would you propose to comply -- what would be the analysis to determine that you are complying with the Voting Rights Act? That's the ultimate question because Gingles set forth the criteria that you have to use to determine whether there's a Voting Right Act violation.

CHAIRMAN HISE: Well, having gone through all these cases as much as I could, I wish it was a simple standard in which they could determine what was the demographics or the process of a district in order to comply with the Voting Rights Act.

But we believe that however these districts may form or the options that are chosen for how these districts form, it is still very much possible to create districts, and intend to, that comply with the Voting Rights Act.

SENATOR BLUE: One last question. So it's the chair's position that you can actually determine clusters without doing the first

Stephenson analysis? Analysis is replicable. I mean, that's what a scientific approach to it is, that folk have to understand that you have to have specific criteria and you can replicate it.

And so is it your position that we can comply with the Voting Rights Act without doing the analysis to determine whether there are Voting Rights Act requirements before you do the clustering, which is what Stephenson says you have to do?

CHAIRMAN HISE: Is there a determination that you can comply with both laws at the same time? Yes.

SENATOR CLARK: Mr. Chairman.

CHAIRMAN HISE: Yes. Senator Clark.

SENATOR CLARK: Thank you, Mr. Chairman.

During the last decennial redistricting process, the General Assembly identified three Senate districts as being VRA districts: Senate District 3, Senate District 4, and Senate District 5. Those three were located in the northeastern region of the state of North Carolina.

If I look at this Duke Senate 3 here, I would say that they were in the area where you have Z1, Y1, I1, N1, Q1, and L1. So what we have there are three clusters, each showing what I would call single district clusters, six of them. So how do we know that within that grouping that there are three that are VRA compliant as is the case currently with Senate District 3, 4, and 5?

CHAIRMAN HISE: I can only say at this point that having nothing been done that we believe that compliant districts can be drawn within these clusters.

SENATOR CLARK: Follow-up, Mr. Chair.

CHAIRMAN HISE: Follow-up.

SENATOR CLARK: Mr. Chair, could we have staff provide us with the total BVAPs for those particular clusters I just identified?

CHAIRMAN HISE: I believe at this point we don't have a sense of what a total package is, but we can provide the information that's consistent with the guidance of this committee at this point, not including racial data as were coming in.

SENATOR CLARK: Well, a BVAP is racial

data. It stands for Black Voting Age Population, and TBVAP is Total Black Voting Age Population, and those were used during the 2011 redistricting process. And I know our criteria says that we will not use racial data in the construction of legislative districts; however, Stephenson has already created them for us in that particular case. Therefore, I just want the data to evaluate what Stephenson has done.

CHAIRMAN HISE: As I said, the committee will continue on the process of data that's available under its stated criteria. And I don't even know that that's available in the system.

ERIKA CHURCHILL: At this time, central staff have followed the committee's instructions, and total population is the only data available to evaluate.

CHAIRMAN HISE: Senator Nickel.

SENATOR NICKEL: I'm just kind of trying to figure out the foundational part to how we do all this. And if we're going to comply with state law and federal law and the Voting Rights Act and Stephenson, race is a central part of all this. So how can we comply

with federal law and all of this without looking at any racial data?

CHAIRMAN HISE: So we've been through multiple decisions. The last decade, the General Assembly was told by the federal courts that there is not sufficient evidence of racially polarized voting in North Carolina to justify the use of race when drawing districts. So no additional information has been presented to this committee regarding racial polarized voting and none was received during the public comment period held last month. As we have said in the past, if information does come forward regarding racially polarized voting, we will consider it.

SENATOR CLARK: Mr. Chair.

CHAIRMAN HISE: Senator Marcus is next.

SENATOR MARCUS: Thank you, Mr. Chair.

It seems to me that the way to answer the question is that this committee should conduct a racialized polarized voting study, and I'm asking now whether you intend to do that either before we set these county clusters or before we set the final maps.

CHAIRMAN HISE: I would repeat that no

evidence has been presented to this committee of racially polarized voting. When We went through this 10 years ago, we put mountains of information together that the court found would be insufficient for doing so, and we have taken no additional action, and I'm aware of no commission study or others from this committee or from the General Assembly but would consider anything presented.

SENATOR MARCUS: Follow-up.

Just to clarify, so I hear what you're saying is nobody else has presented this committee with this information, but it's my belief, and I think many others, that it is incumbent on this committee to make that determination, and to do so, you would need a racialized polarized voting study.

So are you saying, Mr. Chair, that you are not going to order that study? As chair of this committee, that it's somehow up to somebody else to present it to you?

CHAIRMAN HISE: I will say the committee will consider the available information we have. There is no plan or process right now for commissioning a particular

study in any of the budget processes or in legislation.

So then I have Senator Clark, then back to Senator Nickel.

SENATOR CLARK: Thank you, Mr. Chair.

Dickson v Rucho indicates that VRA compliance can be a compelling interest of the General Assembly. And we have codified -- well, codify is not the proper term, but we have stated in essence to our criteria that we consider VRA compliance to be a compelling state interest. Therefore, Dickson v Rucho would require that the General Assembly do a racial polarization study in order to fulfill that obligation.

CHAIRMAN HISE: I appreciate your comment.

Senator Nickel.

SENATOR NICKEL: Question for staff.

CHAIRMAN HISE: You can direct your questions to the chair.

SENATOR NICKEL: My question for staff is just, number one, can we overlay racial data if requested? And, number two, can staff perform a racial polarized voting study if

directed?

CHAIRMAN HISE: Racial data is not available in the system and cannot be produced for the committee and will not be considered by this committee consistent with its criteria.

I will repeat again, we have no directives right now for some kind of ambiguous racial polarized voting study that would take an indefinite amount of time in the process.

SENATOR PERRY: Mr. Chair.

CHAIRMAN HISE: Next, Senator Perry.

SENATOR PERRY: Thank you, Mr. Chairman.

Mr. Chairman, please forgive my impatience, but it feels like you're having to answer the same question, phrased differently, over and over again, and I would like to move forward to understand the information we have in front of us at the appropriate time.

CHAIRMAN HISE: So we're open for questions right now. This, I guess, is kind of the way the legal process works when people are trying to create --

SENATOR BLUE: Mr. Chairman.

CHAIRMAN HISE: Senator Blue.

SENATOR BLUE: One point that I would follow up on, and Senator Clark raised it, and again, staff can be of some assistance, but the jurisprudence in the area, he's pointed out that you got three districts that were constructed in that area beginning in the 80s and 90s that were purposefully preserved in the 2011 redistricting, and part of the problem that was resolved in Rucho is that they were overly preserved and that is they were guilty of efforts to pack, to use the terminology that the courts use.

And there is a body of law that says before you deconstruct these districts, basically redistrict and not take into account the history of them, you have to make certain findings, and I think that's what these members are getting at with respect to a VRA study. It might -- a polarization study.

It might be that a polarization study would show that you can't justify maintaining them as VRA districts, but the law is you can't deconstruct them until you sort of know that they're not serving the purpose any longer for which they were created. And that's the

importance at least in those districts. And again, this whole effort in all of these cases over the last 30, 40 years have been about primarily this area of the state.

And so before deconstructing these districts, unless you're going to make specific findings that the three districts that Senator Clark pointed out to us no longer are needed or they can maintain their status as VRA-created districts, that you're walking into a trap to just deconstruct them without any of the information that would support your decision to purposefully deconstruct them or allow them to be deconstructed.

And I think that that's -- at least that's what I gathered the overview of the law in the area is. I might be wrong, but it seems that some analysis along that line is necessary to satisfy Stephenson, the very first prong of Stephenson, what that case determined in 2002 or 2003 as well as the subsequent Stephenson case, and certainly in Rucho and the subsequent cases in the last decade.

CHAIRMAN HISE: What I continue to say is that this committee is still open to consider

any information that exists on racially polarized voting. There has been no standard that has been met or that the committee should consider at this point. I would also say that for consideration, not considering race is compliant with what this body did -- has done previously in drawing the maps and clearly in what has been upheld by the courts.

So I think next I had Senator Clark and then back to Senator Nickel again, so we'll see if the questions start.

SENATOR CLARK: Thank you, Mr. Chair.

Back to the 16 maps we have before us, I had asked previously was there a methodology by which we could introduce additional cluster maps that we consider to be constitutionally compliant. And the reason I asked that is because these maps were done using the Duke code, which I'm familiar with, and Python, and the deviation was set at point 5 -- at 5 percent, excuse me, therefore, this goes to range from zero to 5 percent plus a minus, that is.

However, it's the prerogative of this body, should we choose to do so, to say we're

going to have a cap lower than the 5 percent. So if you take the cap lower than 5 percent, there are additional options out there, and I would like the authority to submit such a map for consideration, cluster map.

CHAIRMAN HISE: I would just say that we will take a look at anything you submit. You're open to draw anything or others. It would be less compliant if there was more one-county pods formed in the map, more two-county pods formed in the map, more three-county pods formed in the map. In creating it, the plus or minus 5 percent is a court standard that we have utilized and adopted.

If you could produce a map that produces a greater number of smaller county clusters than exists in this map, then the committee would consider that and would look to change our process.

SENATOR CLARK: Thank you, Mr. Chair.

CHAIRMAN HISE: So then, I think, back to Nickel again.

SENATOR NICKEL: Just a data question. Can we get a copy of the population groupings

for each of these 16 different -- well, it's four-county groupings with, you know, two different clusters in each of the four groupings. I'd just like to see that data, what the total numbers are for one versus the other.

ERIKA CHURCHILL: Yes, sir. We can provide total population reports for each of the 17 maps.

SENATOR NICKEL: Thank you.

CHAIRMAN HISE: Any other questions? Senator Marcus.

SENATOR MARCUS: Thank you, Mr. Chair.

This is the first that this committee has presented any maps that the public can look at, and I'm wondering whether -- I don't know what the chair's plan is for today's committee meeting, whether we're voting on these maps and choosing one and moving forward that quickly,

But I would like to have on record a request that the public have time to look at these and to respond to them, and I think we need more public hearings both on county cluster maps but also on whatever additional maps we draw after this process.

I guess my question is what are the

plans for public input on these county cluster possibilities and then moving forward with whatever additional maps are proposed?

CHAIRMAN HISE: So the other purposes today is to announce the beginning of the voting process that's coming in, and that may be -- the drawing process. As you will see, this room is set up with four stations. I believe that one of the stations will be with the data for congressional maps and the other three for -- do all four have all four?

ERIKA CHURCHILL: All four stations will be set up, Mr. Chair, to draw any house, senate or congressional plan. So any member that's sitting down at any one of the stations could choose to start on any one of those three types of plans. And we can do a little bit of a demo as to what folks will be seeing, if you would like that.

CHAIRMAN HISE: We'll get to that in just a second.

That's what's coming in, but starting tomorrow morning, this room will be open for members to come in and begin the process of drawing. There are 16 possible options that

exist under these clusters to submit maps. Some think there's a more optimal podding out there. We would be open to that consideration, if there is a more optimal podding, but for right now, without that evidence coming forth to the committee, the committee will consider any of these 16 possible maps as compliant in that process. And so for the committee to ultimately consider it, it needs to meet one of these 16 parameters. If you have found a more optimal pod, please let us know as soon as possible.

So what is happening after this is we are opening up the drawing process, all 16 of these maps, and the choices you make that exist within these maps will be up to the individual drawer.

I think Senator Blue was --

SENATOR BLUE: Thank you, Mr. Chairman.

I just wanted to make sure you -- you alluded to not just the senate maps but also congressional maps too.

Other than the clustering requirement in the legislative maps, is the criteria that we're going to use in the congressional redistricting process the same as was formulated

for legislative redistricting? I mean, I know the difference in the population and you don't use clusters, but --

CHAIRMAN HISE: There's no variance -- I believe that there is a determination there is no cluster that exists in the congressional maps. I think it's all 100 counties and 14-county cluster. This is coming in with no variance. So this will come in in the same other criteria we've used for compactness and others that are out there and for not using racial data and others are the same criteria that exist across both maps.

And again, they will be open for drawing house, senate, or congressional maps, although this committee will be considering at least we know right now senate maps. The house, as is tradition, we will consider house maps first.

So with all that, maybe we want to get a few moments just to go through what you would be seeing in the process.

ERIKA CHURCHILL: As in 2019, these will be public drawing stations. Everything that is done on one of these drawing stations

will be capable of being viewed by the public. With that, there -- Will is showing you what here in the room the stream will look like. Anyone that is sitting in the back will be able to see the screens and identify which station is the one they want to focus on.

As you can see on the backs of the large monitors, there's four of those. They do have a sign that says Station 1, which is behind Senator Blue, Station 2, which is with Senator Clark, Station 3, which is kind of in between Senator Nickel and Senator Ford, and Station 4, which is with Senator Krawiec.

We'll open up Station 4 so that everybody can see what it will look like with the drawing active. So hopefully, as we understand that the process is going to work, the area where the stations are will be for the staff and the membership. The public will still sit in the area where the public normally sits. The public can sign onto the General Assembly wi-fi if they want to focus on Station 2 or they can use the monitors in the room if they want to kind of monitor what's happening at all four stations simultaneously.

There will also be a feed of all of the audio that is said at each of the stations. So please, as members, remember what is being said at one of the drawing stations will be, as I've heard a member say in the past, heard in Greene county and China simultaneously.

Will, do you want to let me sign in.

JESSICA SAMMONS: We also are going to have a video stream of the entire room, so anyone that signs onto the General Assembly website will be able to see a live stream of everything happening in the room from the perspective of that back camera.

ERIKA CHURCHILL: As you can see, we have a --

CHAIRMAN HISE: They're behind the monitor.

ERIKA CHURCHILL: As you can see, we have attempted to test out what is going on so that everyone will hopefully have as few hiccups as possible when the public drawing starts tomorrow morning, but this is roughly what you would see on the screen in the room.

If anybody wants to come around, we'll leave this up so that you can see what the

actual screens in the drawing station looks like, after the committee adjourns, so everybody can take a look at that.

CHAIRMAN HISE: Just to add to the concept and finally get it all official.

Much like in 2019, we will open this room for members for drawing maps. Beginning tomorrow, this room will be open 9:00 a.m. to 5:00 p.m., Monday through Friday, for members who are interested in working with staff to draw redistricting maps for the senate and for congress. Data will be available for the house as well.

The proceedings will be live-streamed on the General Assembly website. Only maps drawn in full public view will considered by this committee. So if you want to draw a map or an amendment to a map, you will need to draw it here. We anticipate map drawing continuing for at least two weeks. Depending on the level of interest, we may have to expand the hours for drawing or open up this room on weekends as well. We will keep you updated on any changes to the schedule as this process moves forward.

At this point, I will continue to be

happy to answer any questions or any technical inquiries you may have about the process.

Senator Clark.

All right. Senator Nickel.

SENATOR NICKEL: Just on the timing here, when is your plan to vote on the county cluster groupings? Because, you know, it's a waste of time for a lot of senate maps if we're not doing the right county cluster grouping.

CHAIRMAN HISE: So there is no -- the committee has not adopted one of the 16 clusters as counties. They will be open to all members drawing and available for all members while drawing maps.

SENATOR NICKEL: Follow-up.

CHAIRMAN HISE: Follow-up.

SENATOR NICKEL: When is that going to happen in the process? I mean, It should be sooner than the end.

CHAIRMAN HISE: We will consider any of the 16 maps that are here in this process or consider additional information that is submitted. So as we begin this process and as we go through this process, all 16 will continue to be available for the committee.

SENATOR NICKEL: So just to follow-up.

CHAIRMAN HISE: Follow-up again.

SENATOR NICKEL: If I'm drawing a map, I can't -- you know, I don't want to draw a map that doesn't have the right county cluster groupings at some point before that end of the two weeks is up. So do you have a plan to vote on the cluster groupings prior to that end of two weeks?

CHAIRMAN HISE: We do not.

Any other questions? Hearing none, I think that covers everything we have for this meeting.

As we begin tomorrow at 9:00, happy drawing. For the fun and exciting part of this, we look forward to doing it. We will have some specifics out for people for observation and others, but this is all streamed for individuals. So I look forward to seeing you all here and look forward to all this.

This meeting -- having exhausted the agenda, this meeting stands adjourned.

NCLCV v. Hall
21 CVS 15426
LDTX084

(Transcription from YouTube started at 2:41:20.)

CHAIRMAN HALL: ... reiterate what was going on. As the committee members know, last week, a week ago, the chairs told committee members that they could put forth amendments because the chairs intended to vote on this criteria today, and so members have had that week time period to get these amendments in. And the first amendments that any of the chairs saw was well after 8:30 a.m. this morning when the committee started. Most amendments were not completed yet by staff, and so it was on probably -- well, I don't want to -- it was at least an hour or so after the committee was supposed to begin before we even actually had any final amendments.

The chair is in possession, and I think has been passed out, roughly somewhere between 10 and 15 amendments. The chair will tell the committee members that not all of those have actually been put forth at this time. Apparently, there were some members still considering whether they actually want to offer those amendments, so they haven't been signed,

but the chairs directed that those be put out so that, for efficiency purposes, we can just go through the amendments that are in possession of the chairs. And if we come to an amendment that a member does not wish to put forward, then simply tell the chair that and the chair will, of course, allow that amendment to be withdrawn.

For House members, you've probably already seen your email. Session's been delayed until 12:00, and the chair anticipates session probably being delayed again depending on the time that it takes to hear the bills in this committee. The chair understands that this is a very important committee. It's important that we do things here in a thoughtful and deliberative way, and so we're going to give it the time that it needs today.

Members, I'll also start by just making a few remarks because the chair believes that this is really a historic occasion for this committee. As members will remember, in 2019, for the first time ever in the history of this state, maps were drawn without using partisan data and partisan considerations. That was, of course, ordered by court. Most of the members

on this committee were here at that time and probably participated in that, and the members will remember that we passed those maps and that the court reviewed those maps and upheld those maps. That was an historic occasion. This state's over 200 years old, and as far as the chair can tell, since the inception of this state, maps have been drawn by a legislative body, and they have been done using partisan means. But again, for the first time ever, in 2019, that did not take place. That was court ordered.

Today's committee meeting is notable and historic because for the first time ever, without a court order, but with doing it voluntarily, the chairs have put forth a set of criteria before you, not -- voluntarily not using election data and partisanship. And so far as the chair can tell, that's the first time that that has ever happened in the history of this state and perhaps the first time that it's happened in this country. I know other states have decided to go in different routes. They've used independent commissions and they've done other things, but the chair is not aware of any

other states who have just voluntarily kept the ability to draw the maps but agreed to not use that partisan data and partisan consideration.

And so I hope that the members of the public and I hope that the committee members recognize through this criteria that's been proposed the commitment of the chairs to make significant and reasonable efforts to attempt to limit the partisan consideration and election results data from being used in the drawing of these maps.

Additionally, the chair does want to point out, one thing the chair heard often in public comment earlier this week, and that was that -- that there was some ranking of the proposed criteria of the chairs, and that's not the case. And the chair understands that that was an easy mistake or a misunderstanding that members of the public could have had. They were simply looking at a list of criteria and perhaps they thought that list was ranked. Again, it was not ranked at all. The -- certain provisions on the criteria are constitutional. Obviously, those have to take precedence over those areas that are not constitutional, but

otherwise, those -- those items are not ranked at all.

Members, the data -- as most members of the committee know, the data will be released by the Census Bureau today at about 1:00 p.m., as best we can tell, and so it is the goal of the chairs of this committee to adopt this criteria this morning. And one of the reasons for that is as we all understand, the redistricting process is a very litigious process, not just in North Carolina but really across the country, and because of that, the chairs think it's important to get criteria adopted before the data comes out so that no one can reasonably say that the chairs somehow took the data and then drew the criteria to meet the desires of the chairs. It would be impossible for the chairs to have done that. The chairs have, obviously, put out criteria already. The committees will vote on whether to amend that criteria this morning or not, but it was important before that criteria came out -- before the data came out to get the proposed criteria out.

Members, I'll go ahead and tell you, I expect at some point next week to have a

committee meeting to discuss what the committee wishes in terms of a public comment period, whether here or across the state. There's no -- we have not -- the chairs have not set a date for that yet, but check your email over the course of probably tomorrow the chairs will try to get you notice out, but again, that meeting will be for purposes of the committee discussing how we want to go about public comment. And of course, the portal is open, will remain open. Members of the public have the opportunity to continue to comment on any matter that they see fit that's before this committee, or any matter not before this committee if they see fit, but members of the public are encouraged to submit comments as to what the public schedule should be.

Members, with that being said, the chair will turn to Chairman Daniel.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

And I guess I just thank you for those comments and also want to revisit briefly some of the discussions on Monday. There was a question or two that came up regarding proposed criteria that we said we would, you know,

address later on, so makes sense to address today. So I will let -- if the chair would recognize Senator Newton. He would like to make some comments.

CHAIRMAN HALL: Thank you, Mr. Chairman.

And before the chair does that, the chair also failed to note one thing, and that is this is not technically a joint committee. This is the House Senate -- the House committee and the Senate committee voluntarily meeting jointly, and so because of that, we really need to take two sets of votes on any amendments that are put forth today as well as the final set of criteria. So the method that we'll use to do that is when the House members vote on a given amendment or criteria, I will chair, and when senators are voting on the same, Chairman Daniel will step up here to chair so that there's -- the chair just wants to get that out there so there's no confusion. If there's any questions about that -- I know that's not typically how it's done in most of our committees, but we're really taking two votes on each of these today.

Are there any comments or questions

about that from the committee members?

Seeing none, Senator Newton, the gentleman is recognized.

SENATOR NEWTON: Thank you, Mr. Chairman.

The couple of questions I wanted to address that came up on Monday. The first is related to county groupings to be used in the 2021 House and Senate plans. As the criterion that we have proposed says, we will use the state constitutional standard as interpreted by the North Carolina Supreme Court in Stephenson I, Stephenson II, Dickson I and Dickson II to create these county groupings.

These decisions specify the procedure for how the county grouping process works and to give effect to the state constitution's whole county provision and the one person, one vote principle. I will not recite verbatim what those decisions say, but in layman's terms, that means that once the county population data is available, either -- we will use it to identify the maximum number of single counties that can support either one legislative district or multiple legislative districts using the ideal

district population within plus or minus 5 percent and keep those counties whole for the purpose of drawing districts.

Next, we will find the maximum number of two county pairs that can be identified that either support one legislative district or multiple legislative districts factoring in population requirements, and we will consider those two county groupings. Next, we'll do the same for three county groupings, then four, then five and so on until there are no more counties in the map to be grouped.

What I want to make clear about this criterion today is that it will control how the county grouping formula is applied, but we are not adopting county groupings today. We will meet again at a later date for the Senate and the House to separately vote on county grouping plans for their respective maps, and they will be adopted by these committees. So there will be more time for input from members and the public prior to those votes to adopt county groupings taking place.

The second question I want to address is the decision to exclude racial data from

being used by this committee in the drawing of districts. Of course, we understand that North Carolina is obligated to comply with Section 2 of the Voting Rights Act when drawing districts in the 2021 Congressional, House, and Senate plans, but during the last decade, the Supreme Court told us that there is not sufficient evidence of racially polarized voting in North Carolina to justify the consideration of race when drawing districts.

If you have new evidence or new studies of racially polarized voting in North Carolina, we would be willing to examine that evidence, and nothing in this criteria prevents any member from bringing forward such evidence during this process.

Thank you, Mr. Chairman.

CHAIRMAN HALL: Members, the chair's now going to go into --

SENATOR BLUE: Mr. Chairman.

CHAIRMAN HALL: Senator Blue.

SENATOR BLUE: Yeah, I had a quick question of Senator Newton.

CHAIRMAN HALL: The gentleman is recognized for a question.

SENATOR BLUE: Senator Newton, in looking at Stephenson, the first criteria that the court says is that you have to determine what the VRA districts are, and I'm wondering how you determine a VRA district without examining the question of race which is what it's predicated on. And if in fact during the process of drawing clusters, we draw them and then you get information or an indication that a district might be a VRA -- a Section 2 district specifically, that you -- somebody brings evidence that there is sufficient racial polarization in the voting that you have to apply the laws, as evolved, over the last 50 years, that then throws everything else that you're doing about clusters -- or that we're doing about clusters -- not everything, but a significant number of issues about how the clusters look and we go back to the drawing board anyhow.

So with respect to choosing clusters and determining whether they're necessary, I take it that you're waiting to see, whether from the committee or from interested parties, whether there are suggestions of a required VRA

district.

SENATOR NEWTON: Mr. Chairman.

CHAIRMAN HALL: The gentleman is recognized.

SENATOR NEWTON: Thank you. Thank you for that question, Senator Blue.

As you're aware, in 2019, when we drew, we did not consider race in the drawing of those maps, and the court ultimately adopted or embraced that process. And so we're going to do the same thing here. We're going to follow that same process, but as I suggested in my comments, if at any point there is a belief that there's a violation of Section 2, we need to know that. We'll -- we'll, you know, act appropriately at that time.

SENATOR BLUE: One quick follow-up.

CHAIRMAN HALL: The gentleman is recognized.

SENATOR BLUE: The reason and subsequent to 2011 that there were not the other issues on the VRA is the districts had already been drawn and the question got to be -- without considering race, the question got to be which of those districts you could justify as

continuing VRA districts, and so the court did another analysis on concepts of just packing, cracking, stacking, those things, and that's what we were responding to and what Rucho, whatever those cases were in the -- in the last decade. So there had already been a determination by us, as mapmakers, that there were two or three districts that merited continuation in their current form in order to avoid a Section 5 -- especially a Section 5 attack.

Now, I know that that's been muted since 2013, but even trying to avoid a Section 2 attack on the overall redistricting process. And the only aspect of it had to do with overcompensating in non-VRA-required districts, not the VRA districts other than for the Senate, Cumberland, Guilford, and I don't think -- at the last rendering, one of the districts in eastern North Carolina, either Pitt, Greenville, Wayne, Lenoir district, was challenged because of that concept, but it wasn't aimed at whether or not a VRA district actually existed. I know there were no polarization studies done, no evidence presented, and the effort was made to

relate back to 2001 studies to justify it.

But I think that -- I think that Stephenson makes it relatively clear that before you consider clustering of groupings, you have to make that VRA determination.

CHAIRMAN HALL: The gentleman is recognized.

SENATOR NEWTON: Senator Blue, thank you for your analysis on that. The chairs have considered the various options, and we will comply with the law. And the methodology we used in 2019 passed muster, and we're going to continue with that methodology, but thank you for those concerns.

SENATOR DANIEL: Mr. Chair.

CHAIRMAN HALL: Senator Daniel.

CHAIRMAN DANIEL: I'd like to send forth an amendment.

CHAIRMAN HALL: Senator Daniel is recognized to send forth an amendment.

The members should have -- if you look at the top right of your proposed amendments, it will say who it's offered by, and this one is offered by Senator Daniel. It's a proposed amendment to criteria for -- it says Proposed

Criteria for, An Amendment to Propose Criteria for. And rather than asking on each one of these does every committee member have a copy of the amendment, if we come to an amendment and you don't have a copy of it, if you will just simply let the chair know and the chair will ensure that you get a copy of the amendment.

Senator Daniel, the gentleman is recognized to debate the amendment.

CHAIRMAN DANIEL: Thank you, Mr. Chair, and thank you, Senator Newton, for your comments.

In order to make it clear that the committee intends to comply with the Voting Rights Act, I propose this amendment to just add a sentence under the criteria regarding racial data. The amendment would simply add the sentence "The committee will draw districts that comply with the Voting Rights Act." And I would just ask for the committee's support.

SENATOR CLARK: Mr. Chair.

CHAIRMAN HALL: Senator Clark.

SENATOR CLARK: Request to speak regarding the VRA requirements.

CHAIRMAN HALL: Well, if we're -- if

it's on the amendment, that's fine. We're debating the amendment right now. And members of the committee will have ample opportunity to discuss the -- well, frankly, any matter that the member wants that's relevant to the committee, but we're on the amendment now.

So the gentleman, if he wishes, is recognized to debate the amendment.

SENATOR CLARK: Well, my comments actually are relative to the amendment.

CHAIRMAN HALL: Well, then the gentleman is recognized to debate the amendment.

SENATOR CLARK: Thank you.

I consider the amendment to be unconstitutional because Stephenson does say, first, legislative districts required by the VRA shall be formed before non-VRA districts are created.

If there has been a court ruling that nullifies that requirement by Stephenson, I ask that the chairs provide that to this committee or the staff provide that to this committee if not today, then soon.

CHAIRMAN HALL: Further discussion or debate on the amendment.

Senator Blue.

SENATOR BLUE: One question of Senator Daniel.

In the amendment to criteria for, suppose you put a comma after the word plans, and then put except as -- except for purposes of compliance with Voting Rights Act.

CHAIRMAN DANIEL: Senator Blue, I mean, I prefer the amendment as written. You know, we sort of deliberated this at length and went over various versions that we could have considered. I think it probably -- I think it has the same effect as your language. Of course, members can submit additional amendments.

CHAIRMAN HALL: Further discussion or debate on the amendment.

Hearing none, we'll start with House vote. Are any members going to call division? Okay.

Hearing none, all those in favor of the amendment will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: In the opinion of the

chair, the ayes have it, the ayes do have it, and the amendment is adopted.

And the chair will now yield to Chairman Daniel for the Senate vote.

CHAIRMAN DANIEL: Senate members, all in favor of the amendment I just proposed, would you please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: Opposed nay.

UNIDENTIFIED SPEAKER: Mr. Chair, call for division.

CHAIRMAN DANIEL: That's out of order in the Senate.

UNIDENTIFIED SPEAKER: Pardon me. Senate Rule 35, [unintelligible] division in the Senate.

CHAIRMAN DANIEL: All opposed nay.

COMMITTEE MEMBERS: No.

CHAIRMAN DANIEL: In the opinion of the of the chair, the ayes have it and the amendment passes.

CHAIRMAN HALL: Members, the next amendment the chair will take up is Senator Clark's amendment, and this is Number 6, Proposed Criteria Number 6. Says Amendment to

Proposed Criteria Number 6. Do all members -- and it's dealing with the issue of compactness. Again, if any member has any problem at all, if they don't have a copy of it, let the chair know.

Senator Clark, the gentleman is recognized to debate the amendment.

SENATOR CLARK: Okay. Thank you, Mr. Chair.

This particular amendment, essentially all it does is adds an additional item that can be considered in terms of compactness measures, and it is called the cut edges, and additionally it says that we could also rely on compactness measures that are contained within the software that we will be using for redistricting.

CHAIRMAN HALL: Thank you, Senator Clark.

Members, the chair will speak to this particular amendment, and you'll see, as we go through this, the chairs will just generally respond to the various amendments.

The chair believes that the amendment, number one, it contains a measure that the chairs are not familiar with. In the past, the

chairs -- this committee has used various methods to measure the district, so to speak, on compactness. And as you'll see in the chair's proposed criteria, we do recognize the Polsby-Popper and the Reock scores. That's what's been used in the past in this body, and that's what courts have ultimately upheld. So the chairs would ask that the members vote against this amendment.

Further discussion or debate on the amendment?

Hearing none, the House will -- Senator Marcus.

SENATOR MARCUS: Thank you. I would just like to point out that there -- there are better methods, more modern methods, that are listed in Senator Clark's amendment. Just because we've always used only two doesn't mean that that's the way we should continue to operate when there are more clear and better methods that could also be incorporated. The amendment doesn't suggest we should get rid of Polsby-Popper or Reock but include some other very good methods by which we can test districts. And if the chair's not familiar with

them, perhaps we should pause and let the chair become familiar with them because they're good basis on which to determine whether maps are drawn fairly.

CHAIRMAN HALL: Further discussion or debate on the amendment.

If not, the House will now go into a vote.

All those in favor of the amendment, say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: In the opinion of the chair, the nos have it, the nos do have it, and the amendment fails.

We'll now shift to the Senate vote.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

For the Senate members, all in favor of the amendment, please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, nay.

COMMITTEE MEMBERS: Nay.

CHAIRMAN DANIEL: In the opinion of the chair, the nos have it. Thank you.

CHAIRMAN HALL: Members, the next amendment will be from Senator Clark again. This is his Proposed Amendment to Criteria Number 2. This is dealing with contiguity.

Senator Clark, the gentleman is recognized to debate the amendment.

SENATOR CLARK: Thank you, Mr. Chair.

UNKNOWN SPEAKER: Mr. Chair, two is missing from this line, sir.

CHAIRMAN HALL: Okay. If the sergeant-at-arms will ensure that members who raise their hands on each one of these are brought a copy of the amendment.

And so, Members, if you will -- on each one of these amendments -- the chair will try to go slow, but just every time raise your hand high and I will look out and try to direct sergeant-at-arms as well to get those out.

So we'll -- Senator Clark, just one second, let's give those members a chance to take a look at this amendment.

And for the sergeant-at-arms, there are some members who are not on the committee who are in the back, and so the chair would direct the sergeant-at-arms to, number one, focus on

the committee members, and once you've got the committee members amendments, then if you will make sure that the other members not on the committee in the back will get a copy of the proposed amendments.

Okay. Senator Clark, the gentleman is recognized to debate the amendment.

SENATOR CLARK: Thank you, Mr. Chair.

This particular amendment just clarifies that point contiguity -- excuse me -- point contiguity will not be permitted. That's not mentioned in the previous version.

CHAIRMAN HALL: Is there discussion or debate on the amendment?

Chairman Daniel.

CHAIRMAN DANIEL: Thank you, Mr. Chair. Thank you, Senator Clark, for the amendment.

The chairs considered this at length and would ask the committee -- we think it's a good amendment and would ask the committee to adopt it.

CHAIRMAN HALL: Is there further discussion or debate on this amendment? Hearing none, the House will move into a vote.

All those in favor of the amendment

will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

The ayes have it and the amendment is adopted.

We'll move into a Senate vote.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

For the members of the Senate, all favor in Senator Clark's amendment, please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed no.

The ayes have it and the amendment is adopted.

CHAIRMAN HALL: Members, the next amendment is proposed by Representative Reives, and this is the amendment dealing with free elections, the free elections clause. It's Representative Reives free elections.

Again, members of the committee will raise their hands if they don't have a copy. The chair sees Representative Brenden Jones, not sure what's going on over there with Representative Brenden Jones.

Representative Reives, the gentleman is

recognized.

REPRESENTATIVE REIVES: Thank you Mr. Chair.

And I hope that this is self-explanatory. And what it is saying is that -- as you said, it references the free elections clause and to ensure the results of elections will reflect the will of the people; that the district lines not be drawn in a manner that will likely provide any political party seats in congress or in the General Assembly that is disproportionate to the election strength of that party. We ask you to support the amendment.

CHAIRMAN HALL: Thank you, Representative Reives.

And, Members, the chair will -- is also going to take this amendment. The chair would respectfully ask members to vote against this amendment. And the reason why, I'll go back to my opening comments, and that is for the first time ever, this is a redistricting committee that intends to vote on these maps -- on a set of criteria, rather, that does not take into account political data and partisanship, and

this amendment would actually require us to go back on that. It would actually require us to consider election data at some point in order to meet whatever standard is in this proposed criteria.

And finally, the chair would just say that the chair disagrees with the interpretation of Common Cause v Lewis that is set out in this proposed amendment. And again, the chair would ask that you -- respectfully that you vote against the amendment.

Is there further discussion or debate on the amendment?

SENATOR CLARK: Mr. Chair.

CHAIRMAN HALL: Senator Clark.

SENATOR CLARK: This does not require that we use election data in the construction of the districts. We could use election data in the analysis of the districts once they had been approved by the committee.

CHAIRMAN HALL: Further discussion or debate.

Representative Reives.

REPRESENTATIVE REIVES: And I would reemphasize that point, that I think that the

way I would read the agreement and the way I would read the case, we're absolutely asking -- in fact, it seems to me that it's actually asking the opposite and more in line with what the chair is saying, respectfully, that we don't want to use political data that would allow us to do that and that this is completely an analysis amendment when it comes down to it, and so that would be something that we would have to do post taking care of these.

CHAIRMAN HALL: Further discussion or debate on the amendment.

Representative Hastings.

REPRESENTATIVE HASTINGS: Yeah, I was just going to say, with all the respect I have for Representative Reives, the amendment does seem somewhat vague to me, and so that's the reason I'm not going to support it.

CHAIRMAN HALL: Further discussion or debate on the amendment.

If not, the House will now vote, and the question is -- before the House is -- the question before the House members of the committee is the adoption of the amendment.

All those in favor will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: In the opinion of the chair, the nos have it, the nos do have it, and the amendment fails.

We'll move to the Senate vote.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

Members of the Senate, all in favor of Representative Reives' amendment, please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN DANIEL: In the opinion of the chair, the nos have it and the amendment fails.

REPRESENTATIVE RICHARDSON: Mr. Chairman.

CHAIRMAN HALL: Representative Richardson.

REPRESENTATIVE RICHARDSON: Inquiry of the chair.

CHAIRMAN HALL: The gentleman's recognized to communicate with the chair.

REPRESENTATIVE RICHARDSON: Earlier,

there was a Senate ruling saying the Senate rules didn't call out for a division. Do our rules apply as it relates to our votes?

CHAIRMAN HALL: That's right. The House rules applies. It applies to House rules and vice versa for the Senate. And that's why on the first vote the chair asked if anyone intended to call division, and that's each House member's right if they wish to do that.

REPRESENTATIVE RICHARDSON: Just wanted to clarify that. Thank you.

CHAIRMAN HALL: Yes, sir.

Representative Reives, we're going to go back to you. This is Representative Reives' amendment on general policy emphasis, general policy emphasis. The chair doesn't see any hands raised.

Representative Reives, the gentleman is recognized.

REPRESENTATIVE REIVES: Thank you.

And what this will be saying is that we will not be splitting any municipalities, counties, groupings, or VTDs in order to give favor to any voter, any candidate, or any political party. I ask you to support the

amendment.

CHAIRMAN DANIEL: Mr. Chair.

CHAIRMAN HALL: Senator Daniel.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

In regard to this amendment, the chairs did consider this at length and feel that this criteria would be impossible to abide by without considering political data, and therefore we would feel like it would be a violation of our -- the intent of the criteria and would ask for the members to vote against it.

CHAIRMAN HALL: Representative Reives.

REPRESENTATIVE REIVES: And I would just say respectfully, just as with the other amendment, that this would be -- the intent of this amendment would be for post-map analysis, not for anything to be considered when drawing the map.

CHAIRMAN HALL: Further discussion or debate on the amendment. Hearing none, the House will move into a vote.

All those in favor of the amendment will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: In the opinion of the chair, the nos have it and the amendment fails.

We'll move to the Senate vote.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

Members of the Senate, in regards to Representative Reives Amendment Number 2, all in favor of the amendment please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, nay.

COMMITTEE MEMBERS: Nay.

CHAIRMAN DANIEL: In the opinion of the chairs, the nos have it and the amendment fails.

CHAIRMAN HALL: Members, the committee will be at ease just momentarily.

[At ease.]

CHAIRMAN HALL: Members, now we're going to move to Senator Marcus' Amendment to Propose Criteria Number 9. This deals with member residence, Proposed Criteria Number 9 from Senator Marcus.

SENATOR MARCUS: Thank you, Mr. Chair.

CHAIRMAN HALL: One second, Senator Marcus. The chair is going to make sure

we have -- everyone understands which -- which one we're dealing with. So if you'll get --

SENATOR CLARK: Mr. Chairman, may I come to the podium.

CHAIRMAN HALL: Come on up.

The committee will be at ease again momentarily.

[At ease.]

CHAIRMAN HALL: Okay. Members, as the chair said earlier, the chair was aware that perhaps some members had amendments drafted and sent to the chairs that they didn't necessarily want to put forth to the committee.

The chair -- Senator Marcus, the chair's in possession of three possible amendments from the senator. Will the lady read the proposed amendment that you intend to put forth.

SENATOR MARCUS: If it suits the chair, Senator Clark is anticipating -- I don't know why my name is on it, but he was anticipating running the first amendment on this criteria. If we could give him the floor, he can speak to that.

CHAIRMAN HALL: Okay. Then the chair

has conferred with Senator Clark on the matter, and it's -- we can make the technical change later to put Senator Clark's name on it, and Senator Clark can certainly debate it.

Before we move into that, though, can the members give the chair some guidance as to which of these proposed three amendments that Senator Marcus wishes to -- obviously, the one that Senator Clark has shown the chair and that is the one that's the most simple. It just says delete Proposed Criteria Number 9.

Senator Marcus, does the lady wish to send forth any of the other two amendments that -- that have been put forth to chairs?

SENATOR MARCUS: Yes, Mr. Chair. So the amendment that I seek to put forward -- it's hard to distinguish among these since they're not numbered -- begins The residence of members shall not be considered in the formation of congressional districts.

CHAIRMAN HALL: Okay. And to be clear -- so there is one other amendment that begins with incumbency protection, the mapmakers may take reasonable efforts and so on. And on that amendment, the lady does not wish to put

that amendment forward.

SENATOR MARCUS: I did not request this.

CHAIRMAN HALL: You can change your mind later on, but --

SENATOR MARCUS: I'm not changing my mind. I never requested this, so it -- I don't know why it has my name on it, but I am not putting it forward.

CHAIRMAN HALL: Okay. All right. We'll do away with that one, and we'll begin, then, with Senator Clark.

And, Members, if you're not confused enough already, Members, this -- Senator Clark is going to present the amendment that says Senator Marcus on the top right, and it says Amendment to Proposed Criteria Number 9 is delete Proposed Criteria Number 9.

Do any committee members feel that they don't know where we're at? Which would be completely reasonable at this point.

Okay. Do all committee members have that amendment?

UNIDENTIFIED SPEAKER: Yes.

CHAIRMAN HALL: Okay. All right.

Senator Clark, the gentleman is recognized.

SENATOR CLARK: Thank you, Mr. Chair.

Essentially what this will do is say we are not going to consider incumbency in the establishment of congressional or legislative districts.

CHAIRMAN HALL: And the chair will speak to this amendment as well.

Members, the chairs have already included in our proposed criteria some account for member residence, and we have included in there that the member residence may be considered in the formation of legislative and congressional districts. And the chairs feel that this is a traditional redistricting criteria that has been long used, that this committee's used it in the past. The chairs believe that it's best that this committee and this body continue to use this proposed criteria. So the chair would ask you to vote against the amendment.

Is there further discussion or debate on -- Senator Blue.

SENATOR BLUE: Yeah, just a quick

question, Mr. Chair.

Since residence is not -- I can understand looking at residence in legislative districts, since you have to live in them and you got to live in them a year before the election, but in congressional districts, there's no residential requirement. And what you effectively do is figure out a way to skew the map and not for any particular purpose, but if somebody is in a district and serving it well, they don't have to live there. We've had that instance, I think, in the current congressional delegation. I know that was the case in the delegation prior to 20 -- the one elected in 2020.

So what is the reason for considering congressional residence?

CHAIRMAN HALL: Well, thank you for this question, Senator Blue. And the chair would just simply respond by saying that this body has long used member residence both for legislative districts. As the gentleman correctly notes, a member has to live in their residence, there's a time period for that, as the gentleman knows, and the gentleman is

correct that congressional candidates don't necessarily have to live in their districts whether they should or not. But the chair will again say as recently as 2019, the committee has considered the member residence of both legislative and congressional members, courts have upheld that practice, and the chair believes that it works well for the efficient drafting of maps. And so again, the chair would ask that members vote against the amendment.

Further discussion and debate on the amendment. Hearing none, the House will move into a vote.

All those in favor of the amendment will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: In the opinion of the chair, the nos have it and the amendment is defeated.

We'll move to a Senate vote.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

Senate members, we're voting on Senator Clark's amendment regarding member

residence. All in favor of the amendment please say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN DANIEL: In the opinion of the chair, the nos have it and the amendment fails.

CHAIRMAN HALL: Members, we will -- we'll go back to Senator Marcus on her other amendment. And this is an amendment to Proposed Criteria Number 9 dealing with member residence. It begins -- strikes out "member" and says the residence of members may -- I'm sorry -- "the residence of members shall not be considered in the formation" and it goes on.

Senator Marcus, the lady is recognized to debate the amendment.

SENATOR MARCUS: Thank you, Mr. Chair.

It has been made very clear to this body through public comments that voters don't want elected officials to draw maps in districts that favor ourselves. I believe that in the past maps have been drawn with an eye on where incumbents live in order to give certain members a favorable district and others a tougher

district. And the member residence criteria as it's currently proposed, as was handed out to us at the beginning of this week, is so vague that it could and likely will still allow for such favoritism to occur this time around.

So we proposed earlier -- Senator Clark just discussed with you an amendment to eliminate consideration of member residences completely. Since that was rejected, I think it's important that if we're going to consider member residence that we do so in as minimally a way as possible, so that's why I'm submitting this compromise which is to say for the reason Senator Blue pointed out, congress people do not have to live in their district, there's no need to contort districts in order to accommodate their residence, so my amendment would say we should not consider congressional members' residence when we draw the maps, but as Senator Blue pointed out, members of the General Assembly are required to live in our districts and the court in 2019 did give permission to this body to not double-bunk legislators since we have to live in the district, and so this amendment would allow for the residence of

members of the General Assembly to be considered -- or shall be considered, I should point out, in the formation of legislative districts for the sole purpose of avoiding placing more than one incumbent in the same election district. And I ask for your support of this amendment.

CHAIRMAN HALL: Thank you, Senator Marcus.

Members, the chair will again speak to this amendment. And many of the same points the chair made earlier on the prior amendment apply to this amendment, so the chair won't restate those, but the chair will just simply say that the proposed criteria in the chair's amendment gives the committee the latitude to adequately make considerations about member residence. And members will be allowed to put forth -- when the map drawing begins, the members are welcome to put forth a map that doesn't take into consideration those matters.

And so for those reasons the chairs believe that the current criteria is sufficient and appropriate for this committee and would ask you to vote against the amendment.

Further discussion or debate on the amendment.

Representative Reives.

REPRESENTATIVE REIVES: Just an inquiry of the chair.

CHAIRMAN HALL: The gentleman is recognized.

REPRESENTATIVE REIVES: So under your belief under the information or the amendment, the criteria as it stands right now without taking the amendment, what reasons would you say that you feel that residency can be taken into consideration?

CHAIRMAN HALL: Thank you for the question, Representative Reives. And again, as the standard lays out, it just simply may be considered, and so that depends on whatever any committee member wants to put forth to this committee as to why one district or the other may be needed to be drawn where it's at.

And again, just like we did in 2019 and that we've done in the past and the member -- the gentleman has been here through many redraws at this point and understands how this provision plays into there, into that analysis,

and the chair anticipates, just as we've done in the past in other redraws and the maps that we're currently sitting under that have been upheld, that we'll interpret those the same way.

Further -- Senator Marcus.

SENATOR MARCUS: I would just like to clarify if I could, Mr. Chair, a point.

CHAIRMAN HALL: The lady's recognized.

SENATOR MARCUS: Thank you.

The way it's currently drafted, without an amendment, the words "may be" are very vague. That says to me that we might help some members, current members to stay in their districts and we might not help others, and that to me is a problem. We can't have a vague standard like that. That's why my amendment would make it very clear that if we're going to do it for some members, we have to do it for all, and that's why the importance of the word "shall be" is in there instead of "may," and I'd ask for your support of this amendment to make sure it's done fairly.

CHAIRMAN HALL: Further discussion or debate on the amendment. If not, the House will move into a vote.

All those if favor of the amendment will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: Nos have it, the amendment fails. We'll move to a Senate vote.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

All members of the Senate who are in favor of Senator Marcus's amendment, please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN DANIEL: The nos have it and the amendment fails.

CHAIRMAN HALL: Members, the chair mentioned a moment ago the chair had another proposed amendment to Criteria Number 9, and it has Senator Marcus' name on it, but Senator Marcus, as she has said, did not ask for this one to be drafted. And so the chair would simply ask committee members -- the chair's going to read this and ask if the committee member who had this drafted will please let us

know who this is so we can determine whether you want this amendment to be put forth or not.

The amendment reads "Incumbency Protection. The mapmakers may take reasonable effort to not pair incumbents unduly in the same election district."

"The mapmakers may take reasonable efforts to not pair incumbents unduly in the same election district."

Again, this is for Proposed Criteria Number 9. Do -- does any member recognize this proposed amendment?

UNIDENTIFIED SPEAKER: Consider it abandoned.

CHAIRMAN HALL: Okay. It sounds like this one is an orphan, and we will abandon this amendment.

Okay. Members, the next amendment is to Proposed Criteria Number 7. This is Senator Clark's amendment, and this deals with municipal boundaries.

SENATOR CLARK: Mr. Chair.

CHAIRMAN HALL: Senator Clark, just one second.

Okay. All right, the gentleman's

recognized to send forward -- to debate the amendment.

SENATOR CLARK: I withdraw the amendment.

CHAIRMAN HALL: Okay. The gentleman wishing to withdraw his amendment, the amendment will be withdrawn.

Members, the next -- the next amendment is from Representative Reives, and it deal -- it begins with general policy emphasis and then it deals with post-map-drawing policy, and it looks like this is just -- instead of being an amendment to any particular piece of criteria, in the chair's criteria, this is -- this would just simply add to the criteria.

Seeing no members with their hands raised -- Representative Reives, the gentleman, is recognized.

REPRESENTATIVE REIVES: Thank you. And, Mr. Chair, I would be withdrawing this. The first part of this has already been addressed. The second part of this, there's an amendment that I think has been submitted by Senator Marcus that I would defer to.

CHAIRMAN HALL: Okay. The gentleman

wishes for his amendment to be withdrawn, and so it will be withdrawn.

Okay. Back to Senator Marcus, this is an amendment on post-map-drawing policy, post-map-drawing policy. Looks to be, again, another amendment to the criteria as a whole and not an amendment to any specific number in the criteria. Post-map-drawing policy, Senator Marcus.

Senator Marcus, the lady's recognized to debate the amendment.

SENATOR MARCUS: Thank you, Mr. Chair.

This is an amendment that attempts to address the problem that we know will come up which is maps cannot be drawn with consideration of partisan data or previous election results, but they will be analyzed after they are proposed, and we believe that they should be analyzed to see if there is a disproportionate advantage to a candidate or a political party using that data. So this attempts to make clear that that data will not be used in drawing the maps and only for analyzing them afterwards so that the public will know whether they're tilted or not. I ask for you to support the amendment.

CHAIRMAN HALL: Senator Daniel.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

CHAIRMAN HALL: The gentleman is recognized.

CHAIRMAN DANIEL: And thank you for the amendment, Senator Marcus. I think the committee -- the chairs feel like that we want to draw a line in the sand, that we do not intend to use partisan data in the map-drawing process and don't want to inject it in any way, shape, or form into our criteria. Obviously, there may be outside third party groups that do analysis of our maps and that's fine, but we don't intend to do that as a committee.

CHAIRMAN HALL: Further discussion or debate on this amendment. Hearing none, the House will move into a vote.

All those in favor of the amendment will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: Nos have it, the amendment fails. We'll move to the Senate vote.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

All members of the Senate in favor of Senator Marcus' amendment please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN DANIEL: The nos have it and the amendment fails.

CHAIRMAN HALL: Members -- Representative Reives, we'll go back to the gentleman.

This is post-map-drawing policies. Does the gentleman still wish to put forth this amendment?

REPRESENTATIVE REIVES: Happy to withdraw it.

CHAIRMAN HALL: Okay. The gentleman withdraws his amendment.

Okay. Members, now we're back to Senator Clark's -- another amendment from Senator Clark. This is Purpose of Criteria. It's Purpose of Criteria.

SENATOR CLARK: Thank you, Mr. Chair.

CHAIRMAN HALL: Senator Clark, the gentleman is recognized.

SENATOR CLARK: Thank you, Mr. Chair. I, too, Mr. Chair, I went online and -- not went online myself, but I did review a lot of the comments that were provided online, and one consistent was that this particular criteria should be rated higher than this one or that one should be rated higher than that one, and as you indicated, we did not establish a priority for the criteria, but I think that we should. And this particular amendment attempts to do that by stating that -- let's see where are we at.

Therefore, the priority of precedence for compliance shall be as follows: First, equal protection; second, contiguity; third, Voting Rights Act; fourth, county groupings, whole counties, communities of interest/community considerations, whole municipalities, whole VTDs and then compactness.

CHAIRMAN DANIEL: Mr. Chair.

CHAIRMAN HALL: Senator Daniel.

CHAIRMAN DANIEL: Thank you, Mr. Chair, and thank you, Senator Clark, for the amendment.

The chairs considered this amendment and believe that we're not prioritizing our criteria, we're harmonizing our criteria. We're

going to consider all of the criteria and try to comply with all criteria when possible -- whenever possible in drawing the maps, and therefore we don't feel that the criteria should be placed in any particular order and would ask the committee to vote against the amendment.

CHAIRMAN HALL: Further discussion or debate on this amendment.

Senator Marcus.

SENATOR MARCUS: Question.

CHAIRMAN HALL: The lady's recognized for a question.

SENATOR MARCUS: If we're not going to explicitly prioritize -- we know that they will conflict from time to time, so what are -- what are gonna -- how are we going to handle that if we're not saying one thing is more important than another, if they conflict, who and how will we decide which one to follow first?

CHAIRMAN HALL: Senator Daniels.

CHAIRMAN DANIEL: Senator Marcus, I think we fully intend to comply with all state and federal laws and court decisions regarding the criteria and how it's applied to the maps, and that would be our -- I guess our guiding

star in that regard.

SENATOR MARCUS: Follow-up.

CHAIRMAN HALL: The lady's recognized.

SENATOR MARCUS: It's my understanding that the courts haven't clearly said -- have not made all these decisions for us already, and so my fear is if we leave it vague about which order these criteria will be considered in, the public doesn't know, members of this committee don't even know how we will resolve conflicts when the criteria do conflict.

CHAIRMAN HALL: Further discussion or debate on the amendment. Hearing none, the House will move into a vote.

All those in favor of the amendment will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: The nos have it, the amendment fails. We'll move to a senate vote.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

All Senate members in favor of the amendment please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN DANIEL: The nos have it. The amendment fails.

CHAIRMAN HALL: Members, the next amendment will be from Senator Blue, begins with Voting Rights Act.

SENATOR BLUE: Thank you, Mr. Chairman.

CHAIRMAN HALL: Just one second, Senator Blue. I want to make sure every member's got a copy.

Looks -- Senator Jackson, Representative Hardister, right here in the middle. Yeah, just keep your hands up, Members, if you will. Again, we're on Senator Blue's Voting Rights Act amendment. And chair will give just a moment to let these members get a copy. Okay. The chair believes all members have a copy at this point.

Senator Blue, the gentleman is recognized.

SENATOR BLUE: Thank you, Mr. Chair.

The amendment is sort of self-explanatory. I'd simply say that for the four decades since the 1980s redistricting,

starting with Gingles versus Edmisten and through Shaw versus Reno and through the series of cases at the early part of this century and the cases in the last redistricting cycle, North Carolina has basically been the state with the chin out before the Supreme Court to get our redistricting plan struck down. And we've spent tens of millions of dollars over that time period, from the '80s forward, to have the Supreme Court basically say no to all of those efforts that we've done.

And so this is an effort to make sure that we make an effort to try to save the taxpayers what now is collectively more than $50 million in efforts in futility by setting forth that -- related to Senator Daniel's earlier amendment that we know what the Voting Rights Act requires, we know what the Supreme Court has said, and this is the language that they have used with respect to -- in both Cooper versus Harris and Covington versus North Carolina that you got to do to comply with the Voting Rights Act.

And I just offer the amendment so that it's constantly before us so that we don't get

tempted to sort of skirt to the edge again and cost the taxpayers another 10 or $20 million defending this thing back up through the Court of Appeals or the Supreme Court -- or a three-judge panel and the Supreme Court, so I move the adoption of the amendment.

CHAIRMAN DANIEL: Mr. Chair.

CHAIRMAN HALL: Senator Daniel.

CHAIRMAN DANIEL: Thank you, Mr. Chair, and thank you for the amendment, Senator Blue. Certainly, you've been involved in this process for a long time and have a lot of knowledge about that.

The chair, you know, we considered this particular issue as, you know, Senator Newton discussed at the beginning of the committee meeting over the last few days and, of course, we amended this criteria at the beginning of the committee meeting today to make it abundantly clear that the committee will not -- or intends to comply with the Voting Rights Act in drawing districts, and therefore I would just ask the committee to reject the amendment. The criteria explicitly states we will not use racial data in the drawing of the maps and -- but will attempt,

in all respects, to comply with the Voting Rights Act. And certainly we'll -- if any evidence of racially polarized voting in any part of North Carolina is presented to us, that would be something that would need to be looked at, but would ask that the members reject the amendment.

CHAIRMAN HALL: Senator Clark.

SENATOR CLARK: Thank you, Mr. Chair. I'd like to ask a few questions.

You may have mentioned it, but it really slipped my mind. How do we intend to comply with the Voting Rights Act if we don't use the racial data that is required to comply with it?

CHAIRMAN DANIEL: Well, I think, Senator Clark, just as -- thank you for the question. Just as Senator Newton explained at the beginning of the meeting that, you know, in the event that evidence is presented to the committee that there's racially polarized voting in North Carolina, then that might be something the committee would need to address. And at this point, you know, the courts in 2019 and even the Democrats own expert have said that

there's not racially polarized voting in North Carolina, and so, you know, that's sort of where we think we're at.

SENATOR CLARK: Follow-up.

CHAIRMAN HALL: The gentleman is recognized.

SENATOR CLARK: Given that the Stephenson requirement is there that we do VRA districts first, is it not incumbent upon the General Assembly itself to perform racial polarized studies in order to make that determination that as we are here today that there is no racial polarization within North Carolina with regard to voting.

CHAIRMAN HALL: The gentleman is recognized.

CHAIRMAN DANIEL: And I think to answer your question, again, I think, you know, based on the 2019 decisions of the court and the Democrat's own expert, we don't feel that that is necessary at this point at the outset of the map drawing.

CHAIRMAN HALL: Further discussion or --

SENATOR CLARK: Mr. Chair.

CHAIRMAN HALL: Senator Clark, follow-up.

SENATOR CLARK: Were we considering all of the VRA districts during the 2019 court -- within the 2019 court case?

CHAIRMAN DANIEL: I don't really have any further comment about this amendment, Senator -- or Representative Clark.

CHAIRMAN HALL: Is there further discussion or debate on the -- Senator Blue.

SENATOR BLUE: Just one quick comment, Mr. Chairman. In order to make sure that the record is straight, I don't know that there's any testimony that there is no polarized voting in North Carolina. In fact, I think it's just the opposite.

CHAIRMAN HALL: Further discussion or debate.

Representative Richardson.

REPRESENTATIVE RICHARDSON: Yeah. You know, some -- some things make perfect commonsense to me. This amendment I think protects us in the long run, and I think we ought to adopt it.

CHAIRMAN HALL: Senator Newton.

SENATOR NEWTON: I'd like to comment on why we should not adopt the amendment for a very different reason.

The amendment is Senator Blue's summary of the case law. If we start summarizing every aspect of case law related to redistricting, we'd never stop with criteria. So I appreciate the interpretation and the summary. We are going to comply with the law as it is handed down in those decisions, period. We don't need a criteria to do that.

CHAIRMAN HALL: Further discussion or debate on -- Senator Fitch. I mean, Senator Lowe. I'm sorry. Excuse me.

SENATOR LOWE: I look so much different than Senator Fitch.

I think we should adopt this, and I think that -- you know, my mother used to always say if it's not in writing, it ain't so. And I think we need something clearcut for this body to look at. And I think to wait and to push that off is certainly not a good thing, and I hope that we will accept this. Thank you.

CHAIRMAN HALL: Further discussion or debate.

Representative Hawkins.

REPRESENTATIVE HAWKINS: Thank you, Mr. Chairman. This is just a question for Senator Daniel.

CHAIRMAN HALL: The gentleman is recognized to put forth a question.

REPRESENTATIVE HAWKINS: Thank you.

It's just a simple question. How -- if we -- if we find that African Americans-voters of color are packed and stacked, then what do we do in your opinion?

CHAIRMAN HALL: And if the Senator will yield, the chair will just simply state -- add one thing to the discussion. We've talked a lot about that 2019 case, but there was a case before that called Covington in which the General Assembly did redraw maps not using any racial data at all, and of course, those maps were upheld. And this body, and I believe our congressional districts as well, were run on after the redraw of Covington which was a racial gerrymandering claim. Again, this body came in, redrew those maps just like we are proposing -- just like the chair's proposing and this criteria, redrew those maps without using race

and those maps were upheld, and the chairs feel that this is the best path forward to ensure that this committee and ultimately this body can draw and adopt a set of maps that are upheld by the courts.

CHAIRMAN DANIEL: Mr. Chair.

CHAIRMAN HALL: Senator Daniel.

CHAIRMAN DANIEL: And so I think, you know, another point to remember -- for the entire committee to remember is if you -- or Representative Hall made comments at the beginning of the committee meeting that our process is unprecedented, and at this time we're going to voluntarily have a transparent process that's done in public, all map drawing will be done in public, it will be live-streamed. And so, you know, for all -- for many of the concerns that have been addressed or expressed by members of the committee, you know, that is a deterrent for any type of, I guess, mischief, if that's what the opposing party is suggesting. It will all be transparent, it will all be done in public, and certainly once maps are proposed, then members of the opposite party can make whatever suggestions they want to in our

respective committees or whatever allegations in the respective committee. So I think, you know, that's the safeguard on the process that's never been done before, and we intend to follow that as we've stated.

SENATOR CLARK: Mr. Chair.

CHAIRMAN HALL: Senator Clark.

SENATOR CLARK: Just a point for a question for clarification.

The maps that were drawn as a result of the Covington case, I think that was intended to cure the racial gerrymandering; is that correct, sir?

CHAIRMAN HALL: Yes. Part of those were upheld and the court withdrew -- redrew some of those maps, Senator Clark.

SENATOR CLARK: That's right. So it was not the General Assembly's maps that were adopted. It was the maps that were generated by the special master; is that correct?

CHAIRMAN HALL: The majority of the maps were adopted by the General Assembly. The other -- the rest of the maps were adopted by the special master, and that was up to the court.

SENATOR CLARK: Thank you.

CHAIRMAN HALL: Further discussion or debate on the amendment. If not, the House will now move into a vote.

All those in favor of the amendment will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: The nos have it. The amendment fails. We'll move to the Senate.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

All members of the Senate in favor of Senator Blue's amendment, please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN DANIEL: The nos have it. The amendment fails.

CHAIRMAN HALL: Members, the next amendment will be Representative Hawkins' amendment, Proposed Criteria Number 10. And it is dealing with community consideration. And we'll give the members a moment to find that

amendment.

Okay. Representative Hawkins, the gentleman is recognized.

REPRESENTATIVE HAWKINS: Thank you, Mr. Chairman. I appreciate it. I appreciate everyone's time because not only are we doing the important work of redistricting, we're also, in the House side at least, doing the budget. Who thought it would be fun to have all this fun together, right.

But this particular amendment deals with I think the crux of the matter: communities of interest. We all know that making sure that we keep communities that are similar, that have like understanding, who can talk about things that matter to them cohesively is important, and so keeping communities of interest whole is good for all North Carolinians. And so simply what this is saying is that we shall make reasonable efforts to preserve communities of interest in the construction of congressional house and senate districts.

I'll point to, because I was a member of this committee in 2019, my friend to my right. We -- I think everyone learned what

Tabor City was, if you remember that pretty fondly. We talked about it and Columbus county and that grouping quite a bit, but it was -- it was -- it was important to keep that piece -- that city together, that community together because they understood what they had in common.

Similarly, as proposed, is that we want to make sure and clarify that communities of interest include but are not limited to populations that share racial, cultural, ethnicity data, identity. They also share common history of marginalization and/or discrimination, natural resources, populations prone to excessive damage due to natural resources, a la Tabor City, and are organized by bodies that inform the decisionmaking processes of their community. That includes higher education institutions. That includes public schools of which, again, Tabor City and some of those other areas, you know, are not immune to.

And so one case in addition to that specific around higher education is North Carolina A&T State University. I think we all know that the largest HBCU in the country

exists in Greensboro, yet it is split between districts. And so when we start to think about what that community potentially has in common, we need to make sure that we're keeping it whole.

And so, you know, I just wanted to make those comments and hope that everyone will vote for this amendment. If you don't do it for me, do it for Representative Brenden Jones and Tabor City. Because as Senator Blue said, we spent millions on defending maps over the last decade, and if we do not get this right, what will we do again: spend millions, Senator Daniel.

And I want to also close by saying that 2019 is our floor and not our ceiling, and so I hope that we will all use that as our guiding principle to ensure that we can build on the 2019 process so that this 2021 process will move us forward and make sure that we don't have to go through another decade of multiple map draw. Thank you, sir.

CHAIRMAN HALL: Thank you, Representative Hawkins.

Members, the chair will take this one.

The chair thanks Representative Hawkins for his always thoughtful additions to the redistricting committee. And the chair respectfully would ask the committee to vote against this amendment, and here's why: The chairs believe that the current criteria does account for a number of different criteria that could be encapsulated in some areas of this proposed amendment. Also, the chair -- it's the chair's understanding that community of interest is a legal term of art and that could throw some unintended consequences into this criteria that the committee may not actually intend to do.

The amendment also mentions not using affiliation relationships with a political party, so election data, for example. And as the committee now well knows, the chairs have said that we don't want to use that election data. And I know this is not saying you can do that, but the chairs believe it to be, again, an unnecessary piece of language in the amendment.

And chair would, you know, finally say, you know, it speaks to local neighborhood and so it's one of those things that if we're describing -- literally we're going to always

consider these local neighborhoods, that can become difficult to do as well.

Again, the chair thanks the member for a thoughtful amendment, but the chair would have to respectfully ask the committee to vote against the amendment.

Is there a discussion or debate on the amendment. Hearing none, the House will move --

SENATOR MARCUS: Mr. Chair.

CHAIRMAN HALL: Senator Marcus.

SENATOR MARCUS: I'd like to speak to the amendment, if I could.

CHAIRMAN HALL: The lady's recognized.

SENATOR MARCUS: Thank you.

I think we need to make the point that public input that we have asked for from the public for purposes of drawing criteria is overwhelmingly in favor of an amendment like Representative Hawkins. There have been more comments in favor of an amendment like this than any other topic, from my reading of those online and in-person comments.

As the criteria's currently written, I think it's vague. There's no definition of what

community means, and it only says that we -- that those communities, quote, may be considered, which again, as is the problem with other criteria, means that it might not be and that's unacceptable. I think this is a really important amendment and we should support it.

CHAIRMAN HALL: Further discussion or debate. Hearing none, the House will move into a vote.

All those in favor of the amendment will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: The nos have it. The amendment fails. We'll move to the Senate.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

Members of the Senate, all in favor of Representative Hawkins' amendment please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN DANIEL: The nos have it and the amendment fails.

CHAIRMAN HALL: Okay. Members, Senator Clark's amendment on VTDs, voting district splits, voting district splits.

Senator Clark, the gentleman is recognized when he's ready to debate the amendment.

SENATOR CLARK: Thank you, Mr. Chair.

This particular amendment essentially just states that to the extent that a VTD is split that it shall not conflict with a higher priority criteria and the geographic integrity of the VTD shall be preserved.

CHAIRMAN DANIEL: Mr. Chair.

CHAIRMAN HALL: Senator Daniel.

CHAIRMAN DANIEL: Thank you, Mr. Chair. Thank you, Senator Clark, for the amendment.

I think we sort of discussed this in general terms before. Just to reiterate, we're not prioritizing criteria, we're harmonizing our criteria. And we already do have a criteria that says that voting districts should not be -- should be split only when necessary, so therefore I would also respectfully ask that the members vote against this amendment.

CHAIRMAN HALL: Further discussion or

debate on the amendment. Hearing none, the House will move into a vote.

All of those if favor will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: The nos have it and the amendment fails. We'll move to the Senate.

CHAIRMAN DANIEL: Members of the Senate, all in favor of Senator Clark's amendment, please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN DANIEL: In the opinion of the chair, the nos have it. The amendment fails.

CHAIRMAN HALL: Members, the next amendment will be Representative Harrison's amendment dealing with equal population. It's equal population. This is Proposed Amendment to Criteria Number 1.

Representative Harrison, the lady's recognized.

REPRESENTATIVE HARRISON: Thank you, Mr. Chair. And just to clarify, because I

believe you all might have two copies of amendment of Criteria 1 in front of you, and the one that I am proposing would strike the language "as nearly equal as possible in the congressional district drawing" and replace it with "within plus or minus 150 people of the ideal district population."

CHAIRMAN HALL: Representative Harrison, if we can suspend just one moment.

Okay. So the chair does have two proposed amendments from Representative Harrison.

Where's the other one.

REPRESENTATIVE HARRISON: It's Criteria 1.

CHAIRMAN HALL: One of them deals with within plus or minus 150 people; the other, the chair's going to have to locate to make sure we can -- okay.

Is the lady withdrawing the other amendment?

REPRESENTATIVE HARRISON: I am, and I'm sorry if I wasn't clear.

CHAIRMAN HALL: No, that's fine.

The lady is withdrawing her equal

population amendment that just simply strikes out the very last sentence of that criteria, so that amendment will be withdrawn.

The amendment that the lady is putting forth, Members, is again an amendment to Proposed Criteria 1. And the amendment, if you'll look down in the body of the amendment, equal population says within plus or minus 150 people of the ideal district population. That is the amendment that the lady's putting forth.

And, Representative Harrison, the lady's recognized.

REPRESENTATIVE HARRISON: So I will explain, and I believe I talked about this in the 2019 redraw as well.

So there have been several court decisions, most prominently the US Supreme Court in Tennant versus Jefferson County, that allowed for deviation in the drawing of congressional districts. If I heard Senator Daniel correctly on Monday, I believe he said that as nearly equal as practicable meant zero, zero deviation. So this amendment would allow for a minimal amount of deviation based on the Tennant precedent, when the Tennant precedent actually

allows seven-tenths of a percent of deviation, which is a pretty significant number. This just proposes 150 people which is equivalent to .02 of the ideal population for North Carolina congressional districts. So this just gives flexibility to the map drawing and may be able to avoid split precincts and those sorts of problems, and I would urge your support. Thank you.

CHAIRMAN HALL: The chair thanks the lady, and the chair will handle this amendment.

Members, the chairs believe that the safest legal way to draw these maps is through zero deviation. And of course, this way, the amendment from Representative Harrison, would not follow zero deviation, so the chairs believe that the safest path forward is to do that traditional redistricting criteria, the one that this committee has used, one the body has used I guess at least in the most recent history and go zero deviation. The chair would ask the members to vote against the amendment.

Further discussion or debate on the amendment.

SENATOR CLARK: Mr. Chair.

CHAIRMAN HALL: Senator Clark.

SENATOR CLARK: And this particular proposal is also intended to take into consideration the fact that the census block data at the block level is not accurate as it was in the past. The Census Bureau has intentionally introduced error into the data for the protection of privacy, so the notion that we're going to really have a great degree of resolution that will support a zero deviation standard is sort of farcical.

CHAIRMAN HALL: Well, and the gentleman -- as the gentleman knows, there has been what they're determine noise put into the data to try to protect folks' privacy, the chair understands that, and so the chairs believe that, really, all we can do is go based off of the numbers that the census gives us. Whether that accounts for noise or not is not 100 percent accurate. All we can do is go with those numbers and try to do zero deviation of those numbers. And again, the chairs believe that to be the legally safest path forward for this committee and the body.

Further discussion or debate on the

amendment. Hearing none, we'll move to a House vote.

All those in favor of the amendment will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: The nos have it. The amendment fails. We'll move to the Senate.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

For members of the Senate, all in favor of Representative Harrison's amendment, please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN DANIEL: In the opinion of the chair, the nos have it. The amendment fails.

CHAIRMAN HALL: Okay. Members --

REPRESENTATIVE HAWKINS: Mr. Chairman.

CHAIRMAN HALL: Representative Hawkins.

REPRESENTATIVE HAWKINS: Can we be advised on what's happening with the session in the North Carolina House because it's 12:30.

CHAIRMAN HALL: Well, the chair is

going to check the chair's text messages and emails.

REPRESENTATIVE HAWKINS: Thank you.

CHAIRMAN HALL: Well, the chair's confident -- the chair sees one senior appropriations chair sitting over here, the majority leader and the rules chair's here, so the chair's confident that the member's not missing any votes. So I anticipate session is going to be delayed until this committee finishes its business which hopefully won't be too long.

REPRESENTATIVE HAWKINS: Thank you.

CHAIRMAN HALL: Members, the last -- I think the last -- we're out of amendments.

There is one document that the chair wants to --

SENATOR CLARK: Mr. Chair.

CHAIRMAN HALL: Senator Clark.

SENATOR CLARK: May I approach the dais.

CHAIRMAN HALL: Yes, absolutely.

[At ease.]

CHAIRMAN HALL: There is actually one more amendment and -- Mr. Sergeant-At-Arms, has

this one been passed out yet, this last one that you -- okay.

Members, the amendment the chair is referring to is Senator Clark's amendment dealing with counties, groupings, and traversals. Counties, groupings and traversals. Will members raise their hand if they don't have a -- Senator Clark. Okay. Sergeant-at-arms will get -- will please distribute a copy of that amendment, and --

Okay. And, Members, the chair's informed that the House will not go into session until this committee has completed its business today.

Representative Warren.

REPRESENTATIVE WARREN: Thank you, Mr. Chair. I was just curious. The one amendment that was accredited to Senator Marcus, and I think we identified it was actually Senator Clark's, on Proposed Criteria Number 9, the member residence, was that withdrawn? Did I just --

CHAIRMAN HALL: You know, the one that was withdrawn, and the gentleman will have to get with staff to determine which one was

actually withdrawn.

Representative Stevens.

REPRESENTATIVE STEVENS: [Inaudible.]

CHAIRMAN HALL: Yeah, we're waiting right now. We're handling some other business. We're handling some old business, it sounds like.

Members, the chair is also in possession of a document that is, I don't know, three and a half pages long. It says Proposed Criteria for Redistricting August 12, 2021, and the chair was just given this.

Does any member -- I'm going to hold it up. Has a member put this forth as an amendment? There's no name on it and it was given by staff.

Senator Clark.

Okay. Members, this is the last amendment that the committee is in possession of. This again is Senator Clark's amendment to Proposed Criteria 3, counties, groupings, and traversals. The chair believes the committee is in possession -- all members are in possession of it now.

Senator Clark, the gentleman is

recognized to speak to the amendment.

SENATOR CLARK: Thank you, Mr. Chair.

There are quite a few moving pieces in this one so I'll just focus on a few components here. Let's see. If we go down to the third paragraph, it states "The committee shall select from the total set of constitutionally compliant county grouping maps, one each for the House and Senate, a grouping map that shall be used for the construction of House and Senate districts. When choosing from among constitutionally compliant county groupings maps, the grouping map closest to zero population deviation shall be used."

And the purpose of this particular one is to make sure we understand that there will be more than one constitutionally compliant set of grouping maps and therefore we have to have in place some sort of mechanism for deciding amongst those constitutionally compliant maps which we will select.

Then the following paragraph says "To achieve population balance in the 2021 congressional plan, some counties must be split. The number of counties that may be split shall

not exceed 14 which is the number of congressional districts."

The reason for this particular provision is to provide specificity in terms of how many counties can be split. There is none in the criteria as currently stated.

And it says "When splitting counties, reasonable efforts shall be made not to split communities of interest."

And then the final one says that after making any available single-county congressional districts -- and this relates to the one in the first paragraph which I skipped -- but it says "After making any available single-county congressional districts, any two-county grouping with a total population sufficient to contain a congressional district within the combined borders, the committee shall construct such a district and the larger of the two counties, based upon population, shall remain whole and not be split."

CHAIRMAN HALL: Senator Daniel.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

Thank you, Senator Clark, for the amendment. Of course, the chair -- or I would

remind the committee that a future vote will happen on the county groupings, so this amendment in part is not appropriate at this time. The chairs feel like that the -- this criteria as currently drafted, as is shown on the top of Senator Clark's amendment, is entirely appropriate and adequate for this particular topic, and would ask that -- respectfully that the committee reject the amendment.

CHAIRMAN HALL: Further discussion or debate on the amendment. Seeing none, we'll move into a House vote.

All those in favor of the amendment will say aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: The nos have it. The amendment fails. We'll move to the Senate.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

Members of the Senate, all in favor of Senator Clark's amendment, please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN DANIEL: The nos have it and the amendment fails.

CHAIRMAN HALL: Okay. Members, that's all the amendments the chair has in the chair's possession. So now we will move to the criteria -- Representative Harrison.

REPRESENTATIVE HARRISON: [Inaudible.]

CHAIRMAN HALL: Okay. We will move to the criteria -- the chair's proposed criteria now as amended. And, of course, that has previously been sent out, and it was amended today, but if any members feel like they need to get another copy of that, then the chair will so direct.

Representative Harrison.

REPRESENTATIVE HARRISON: Thank you, Mr. Chair.

I did not propose it today after consultation with folks about the potential of adding some criteria related to transparency, which is something we've heard about from the public speakers and online comments, and I wanted to propose a process for transparency,

but I didn't want to include it with the criteria because it didn't seem to fit, and I just wanted to make that point on the record, and I hope to bring it forward next week. Thank you.

CHAIRMAN HALL: Absolutely. And the lady, Representative Harrison, and all members are encouraged to put forth whatever their thoughts and opinions are on the way that we should conduct this process, how we should go about whatever level of transparency the committee sees fit. And the committee, of course, has a little bit of time to look at those things because, of course, we're not going to have enough data to draw any maps we believe for at least three and a half weeks so we've got some time. And we want to do public comment, really, before we start drawing those maps. So do give us your ideas about how you want to see the process ran.

Mr. Chair.

CHAIRMAN HALL: Senator Daniel.

CHAIRMAN DANIEL: Mr. Chair, I would move at this time for the adoption of the criteria as amended and ask that staff engross

that into a new document and provide it to the committee members and also post it on the committee website.

CHAIRMAN HALL: And you want them to make technical changes as needed, I believe, Senator Daniel.

CHAIRMAN DANIEL: Yes.

CHAIRMAN HALL: Okay. Members, is there -- Representative Hawkins.

REPRESENTATIVE HAWKINS: This goes back to since we're moving forward on these, it was a question that I just didn't get a ton of clarity on.

When was asked, you know, regarding Senator Blue's statements about, you know, packing of African Americans, and like what happens -- what happens if we find that there ends up being, based on our -- you know, our best outlines of not using racial data, if we find that African Americans have been packed, what do we do? And so I understand -- and I'm -- you know, I'm not a country lawyer, but I want to make sure because people are asking those kinds of questions online, and we want to make sure that this process is above, you know,

reproach, right, that we move forward and we hope that we will not be in litigation for the next decade. And I again just want to make sure I'm asking that question clearly because it didn't come across as clear in the first.

CHAIRMAN HALL: Okay. Well, Representative Hawkins, the chair will try to answer that question as best I can. Again, knowing this is a committee, it's a body that makes a decision. We're agreeing -- or at least we're proposing in this criteria not to use racial data at all in the drawing of these maps, but as Senator Daniel has said, members of the committee and members of the public are welcome to gather whatever evidence and put forth evidence that might fall under Section 2 of the Voting Rights Act, that that may require some use of racial data. And, of course, that will be up to this body, to this committee, and ultimately two bodies of the two chambers as to whether to consider that and how to do that. But at this point, none of that evidence has been put forth.

SENATOR CLARK: Mr. Chair.

CHAIRMAN HALL: Senator Clark.

SENATOR CLARK: Thank you, Mr. Chair.

And I did ask the committee earlier on, and I want to restate my request, and that is that the committee provide any ruling that specifically nullified the requirement of Stephenson that states that first legislative districts required by the VRA shall be formed before non-VRA districts are created.

CHAIRMAN HALL: Further discussion or debate.

Again, Senator Daniel has made a motion on the criteria -- post criteria as amended. Seeing none -- Senator Marcus.

SENATOR MARCUS: I just -- I guess a point of clarification. I'm going through my notes here and just want to be clear that we are now being asked to vote on the criteria that were handed out on Monday with the addition of Senator Daniel's amendment.

CHAIRMAN HALL: That's correct, Senator Marcus.

SENATOR MARCUS: And by my count there were 12 Democratic amendments. Only one -- only one carried, and that is Senator Clark's on Criteria Number 2, so that is now part of the

criteria that we're voting on.

CHAIRMAN HALL: That's right. There was one Republican amendment adopted and one Democratic amendment adopted.

Further discussion or debate on the motion. If not, the House will move into a vote.

All those in favor of Senator Daniel's motion will signify it by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN HALL: All of those opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN HALL: The ayes have it and the motion carries. We'll move to a Senate vote.

CHAIRMAN DANIEL: Thank you, Mr. Chair.

Senate members, all in favor of the criteria -- of adopting the criteria as amended, please indicate by saying aye.

COMMITTEE MEMBERS: Aye.

CHAIRMAN DANIEL: All opposed, no.

COMMITTEE MEMBERS: No.

CHAIRMAN DANIEL: The ayes have it and the criteria is adopted.

CHAIRMAN HALL: Okay. Members, a couple of housekeeping items for staff that the chair has been passed up, and the chair is going to call on Erika Churchill to explain these.

Number one, the chair anticipates instructing central staff to process the legacy data from the Census Bureau.

Ms. Churchill, will you -- will you discuss what that means.

MS. CHURCHILL: Yes, sir. That means that the Information Systems Division will receive the Census Bureau legacy data whenever it is released by the census, which we anticipate to be sometime today, and it means they will begin processing that data for use in the Maptitude system and our reporting engines which allow us to actually produce the bills that technically is what the General Assembly is enacting.

CHAIRMAN HALL: Okay.

MS. CHURCHILL: And as long as we have the instruction to begin that processing, we will begin it as soon as the Census Bureau releases it.

CHAIRMAN HALL: Okay. Members,

with --

SENATOR CLARK: Mr. Chair.

CHAIRMAN HALL: Senator Clark.

SENATOR CLARK: I have a request. Once the data is downloaded, can the ISD provide us with the county population data. That's pretty easy.

CHAIRMAN HALL: The chair will so direct that that will be provided when it's downloaded.

MS. CHURCHILL: As soon as we have it available and we've done our few little cross checks for quality assurance, we'll be glad to post that to the web.

CHAIRMAN HALL: Let the chair clarify. That will be sent out once it's in a readable format to where it can be sent out and properly read --

MS. CHURCHILL: Yes, sir.

CHAIRMAN HALL: -- and it has been checked, as the lady said, for any technical issues.

MS. CHURCHILL: Yes, sir.

CHAIRMAN HALL: Senator Clark.

SENATOR CLARK: Yes, but the Census

Bureau provides those files, and essentially it's nothing but a CSV file that you can access -- access via Microsoft Access. All I'm asking for is the 100 counties and what is the population of those counties. There's no quality check required for that.

CHAIRMAN HALL: Ms. Churchill, the lady is recognized.

MS. CHURCHILL: I will not speak for our Information Systems Division. I do know that they want some time to make sure that what they are inputting into the General Assembly systems is the same as what the Census Bureau is delivering. If we have available from the Census Bureau the CSV file, obviously, it will be available on the Census Bureau's website. We are happy to post a link at the General Assembly's website.

SENATOR CLARK: Thank you, Mr. Chair. I'll get it myself.

CHAIRMAN HALL: Okay.

Members, the chair intends to make that direction to staff to process the legacy data from the Census Bureau without objection. So ordered.

Members, staff has requested instructions for central staff, that is, to develop a 2021-2022 residency layer. I think that's self-explanatory.

Ms. Churchill, this committee has adopted a set of criteria that allows it to consider incumbency of members, and the staff just needs to be able to overlay that on the map.

Did I say that pretty much correct in simple terms?

MS. CHURCHILL: Absolutely. And just as a reminder for those of you who have been here before as these residency layers have been developed, we will be contacting each of you individually to confirm what your residency is. We do ask that when we make that contact that you sign and return to us. We will also be making the same contact of all 13 congressional delegation members for the same information.

CHAIRMAN HALL: Members, as previously stated, the chair anticipates the committee meeting at some point next week to discuss how this committee will go about the public comment portion of our work and, again, by way of

example, the chairs will be listening to hear whether the committee wants to hold meetings all across the state or here in this room via video feed, whatever the committee's wish may be.

So if committee members will, you can go ahead and start putting forth some of those suggestions. We want to come back in here and have, again, an open, transparent discussion next week about what committee members feel would be the best path forward on the public comment period. Don't know that we will necessarily make a decision on that criteria next week, but we'll see how it goes.

Also, the public comment portal is going to continue to be open. Again, members of the public are encouraged to send forth any thoughts they have about the entire process, especially right now, how they would like to see public comment conducted moving forward now that we have criteria adopted.

And, of course, members are encouraged to reach out to their constituents and hear what they have to say about it.

Just momentarily, the committee will be at ease.

[At ease.]

CHAIRMAN HALL: At this point, there is no further business before the committee today and therefore the committee is now adjourned.

EXPRESSIVE HARMS, "BIZARRE DISTRICTS," AND VOTING RIGHTS: EVALUATING ELECTION-DISTRICT APPEARANCES AFTER *SHAW v. RENO* †

*Richard H. Pildes**
and
*Richard G. Niemi***

With technical assistance provided by Kimball Brace and Doug Chapin

Voting-rights controversies today arise from two alternative conceptions of representative government colliding like tectonic plates. On one side is the long-standing Anglo-American commitment to organizing political representation around geography. As embodied in election districts, physical territory is the basis on which we ascribe linked identities to citizens and on which we forge ties between representatives and constituents. On the other side is the increasing power of the Voting Rights Act of 1965 (VRA),[1] which organizes political representation around the concept of interest. The Act prohibits the dilution of minority voting power and thereby necessarily ascribes linked identities to citizens on the basis of group political interests. Whenever these two plates of territory and interest collide, surface disturbances in voting-rights policy erupt.

Shaw v. Reno[2] is the most recent manifestation of these opposing forces. In *Shaw,* a deeply fractured Supreme Court addressed the conflict between territory and interest by concluding that, for purposes of

For first-rate technical assistance, such as production of the maps and data sets included herein, this article relies on Election Data Services, Inc., Washington, D.C. and, more specifically, the efforts of Kimball Brace, Doug Chapin, and Jeff Macintyre. For extremely helpful comments on earlier drafts, we would like to thank Alex Aleinikoff, Steven Croley, Bernard Grofman, Sam Issacharoff, Larry Kramer, Jeffrey Lehman, Deborah Malamud, Harold Stanley, and the participants in the Yale Legal Theory Workshop. We were also fortunate to have exceptionally skillful research assistance from Jeffrey Costello and Michael Heel.

1. Pub. L. No. 89-110, 79 Stat. 437 (codified as amended at 42 U.S.C. §§ 1971, 1973 to 1973bb-1 (1988)).

2. 113 S. Ct. 2816 (1993).

the Fourteenth Amendment, the geography of election districts "is one area in which appearances do matter."[3] Against the pressure of interest-oriented alternatives that the Voting Rights Act exerts, the decision reaffirms the continuing centrality of physical territory to legitimate political representation. In line with this reaffirmation, the Court endorsed a new kind of equal protection challenge to legislative redistricting. This new, geography-based challenge might be called a *district appearance claim.*

As the Court defined this claim, "a reapportionment scheme [may be] so irrational on its face that it can be understood only as an effort to segregate voters . . . because of their race . . . ."[4] In this passage, "on its face" is to be read literally: only election-district configurations that convey a dramatic visual impression of this sort implicate the principles of *Shaw.* The specific holding of *Shaw* is that the Constitution permits such an election district only when sufficiently justified under the exacting standards of strict scrutiny.[5]

No other decision from any court has held that, in some circumstances, a district might violate the U.S. Constitution when its shape becomes too "bizarre."[6] When physical geography is stretched too thin, when it is twisted, turned, and tortured — all in the apparent pursuit of fair and effective minority representation — at some point, too much becomes too much. That appears to be the judicial impulse that accounts for *Shaw:* in the conflict of territory and interest, the Constitution requires policymakers somehow to hold the line and accommodate both.

But judicial impulses are one thing, legal doctrine another. That most people, judges included, recoil instinctively from willfully misshapen districts is understandable enough. Yet defining the values and purposes that might translate this impulse into an articulate, justifiable set of legal principles is no easy task. Leading academic experts in redistricting have long argued that this impulse reflects untutored intuition, an instinctive response that careful analysis reveals to be unwarranted.[7] *Shaw* translates this impulse into constitutional doctrine

3. 113 S. Ct. at 2827.

REV. 77 (1985) [hereinafter Grofman, *Criteria for Districting*]; Bernard Grofman, *Would Vince Lombardi*

– Ex. 8816 –

but does little to explain or justify the principles that might lie behind it. Moreover, the judicial impulse that too much is too much will degenerate into either a manipulable tool or a meaningless gesture unless transformed into legal principles that courts and redistricting bodies can apply with at least some consistency and certainty. Yet, beyond casting doubt on "highly irregular" districts, *Shaw* provides no criteria to guide reapportionment bodies or courts in judging when this line has been crossed. As Justice White, writing for four dissenters, said: "[H]ow [the Court] intends to manage this standard, I do not know."[8]

Working out the theory and implications of *Shaw* is particularly urgent because the decision is significant for voting-rights law in not one, but two, ways. *Shaw* directly addresses only constitutional constraints that will now function at the outer boundaries of the districting process. At the core of that process, however, the conflict between territory and interest must be resolved in nearly every context in which the Voting Rights Act applies. The Act imposes a duty to avoid minority-vote dilution, but the scope of that duty depends, in part, upon how much the claims of interest can take precedence over those of territory. Thus, *Shaw* will not only constrain the districting process constitutionally but, through its radiating effects on statutory interpretation, may reshape the districting process at its core.

This article attempts to define the constitutional principles that characterize *Shaw* and to suggest how those principles might be applied in a consistent, meaningful way. Part I, in which we argue that *Shaw* must be understood to rest on a distinctive conception of the kinds of harms against which the Constitution protects, is the theoretical heart of the article. We call these *expressive harms,* as opposed to more familiar, material harms. In Part II, we briefly survey the history of previous, largely unsuccessful, efforts in other legal contexts to give principled content to these kinds of harms in redistricting. Parts III and IV then provide an alternative for evaluating district "appearance" by developing a quantitative approach for measuring district shapes that is most consistent with the theory of *Shaw.* These Parts are the empirical and social-scientific heart of the article. We apply our quantitative approach to congressional districts throughout the country, enabling meaningful comparisons between the congressional district at issue in *Shaw* and other districts. We also compare the shapes of congressional districts historically to test whether the district in *Shaw* is a distinctly recent phenomenon. In doing so, we identify

Have Been Right If He Had Said: "When It Comes to Redistricting, Race Isn't Everything, It's the Only Thing"?, 14 CARDOZO L. REV. 1237 (1993) [hereinafter Grofman, *Vince Lombardi*].

8. *Shaw,* 113 S. Ct. at 2842 (White, J., dissenting).

the kind of districts most constitutionally vulnerable after *Shaw.* In Part V, we describe the further questions that lower courts must answer in deciding whether particular vulnerable districts ultimately fail the constitutional standard outlined in *Shaw.*

Shaw will undoubtedly be a controversial and confusing decision. We write not to praise *Shaw,* nor to bury it, but to seek to understand it on its own terms. What follows is an effort to tease out the principles underlying *Shaw* and to suggest one approach to implementing its seemingly intractable mandate.

I. Deciphering the Holding of *Shaw*

Shaw is challenging intellectually precisely because it is so puzzling legally. Untangling its reasoning requires considerable effort. We begin with the Voting Rights Act, which provides the backdrop against which the facts in *Shaw* arise.

A. *Background of the Voting Rights Act*

The VRA not only permits, but requires policymakers, in certain specific circumstances, to be race conscious when they draw electoral district lines.[9] In 1982, Congress amended section 2 of the Act to clarify that discriminatory intent was not a necessary element of a minority-vote dilution claim; proof of discriminatory result is now sufficient.[10] Four years later, in *Thornburg v. Gingles,*[11] the Court focused the standard for proving such results around three factors that conjoin social conditions and voting structures. First, the minority community[12] must be "sufficiently large and geographically compact" to constitute a minority-dominated election district.[13] Second, the mi-

9. Section 2, for example, explicitly speaks in racially conscious terms: "The extent to which members of a protected class have been elected to office . . . is one circumstance which may be considered" in assessing a dilution claim. 42 U.S.C. § 1973(b) (1988). There is no reason to assume, of course, that redistricters were not race conscious before the VRA.

10. 42 U.S.C. § 1973 (1982).

11. 478 U.S. 30 (1986).

12. The Act protects racial groups and, since 1975, language-minority groups, 42 U.S.C. §§ 1973(a), 1973b(f)(2) (1988) (defined as Asian Americans, American Indians, Alaskan natives, and persons of Spanish heritage in 42 U.S.C. § 1973*l*(c)(3) (1988)).

13. 478 U.S. at 50-51. A major question the Court continues to leave open is whether plaintiffs can bring claims seeking "influence districts" — that is, districts in which the plaintiffs' group is not large enough to control election outcomes in a district, but large enough so that an alternative to the current system would give it significant enough influence, in conjunction with supportive coalition members, to control outcomes. *See* Voinovich v. Quilter, 113 S. Ct. 1149, 1155 (1993) (assuming, without deciding, viability of such claims); Growe v. Emison, 113 S. Ct. 1075, 1084 n.5 (1993) (leaving question open); *Gingles,* 478 U.S. at 46-47 n.12 (leaving question open); *see also* Prosser v. Elections Bd., 793 F. Supp. 859, 870 (W.D. Wis. 1992) (three-judge court; per curiam) ("The creation of a stronger 'influence' district, however, is a modest plus from the Act's standpoint."). For discussion of influence-district claims, see Bernard

nority community must be "politically cohesive"[14] — that is, it must demonstrate common voting preferences for candidates.[15] Finally, the majority must be engaged in racially polarized voting behavior that over time "usually" defeats the preferred candidates of the minority community.[16] When these conditions are met, the combination of the existing voting structure and the political dynamics of race can be said to cause minority-vote dilution.[17] The remedy for such a violation requires the governmental unit to create an alternative voting structure that will enable fair and effective minority representation.

The Court, however, specifically designed the three *Gingles* criteria to define vote dilution only in the context of one particular type of electoral structure: multimember or at-large electoral districts. As in *Gingles,* most VRA litigation at the time challenged such districts.[18] These electoral structures, then common throughout the country,[19] dated from turn-of-the-century Progressive era reforms. In these reforms, northern Progressives and southern Redeemers sought to undermine community-based politics — portrayed as the province of corrupt local bosses — and instead to concentrate power in more centralized, "expertly" administered political bodies.[20] In many places, the specific aim of these reforms was to diminish the political influence of freed blacks.[21] In these *Gingles*-era challenges to multimember

14. 478 U.S. at 51.

15. 478 U.S. at 56.

16. 478 U.S. at 50-51. The best study of the emergence and content of the racial-polarization requirement is Samuel Issacharoff, *Polarized Voting and the Political Process: The Transformation of Voting Rights Jurisprudence,* 90 MICH. L. REV. 1833 (1992).

17. More precisely, *Gingles* holds that vote dilution is shown only if, "under the totality of the circumstances," the challenged electoral mechanisms "result in unequal access to the electoral process." 478 U.S. at 46.

18. When multiple candidates are elected from a single jurisdiction, a cohesive minority population might constitute a significant fraction of the district and yet elect no members. That is, the majority population would always outvote them. *See* Lani Guinier, *The Triumph of Tokenism,* 89 MICH. L. REV. 1077, 1094 (1991); Issacharoff, *supra* note 16, at 1839-40.

19. *Cf.* Richard G. Niemi et al., *The Impact of Multimember Districts on Party Representation in U.S. State Legislatures,* 10 LEGIS. STUD. Q. 441, 443-46 (1985).

20. *See generally* SAMUEL P. HAYS, *The Politics of Reform in Municipal Government in the Progressive Era, in* AMERICAN POLITICAL HISTORY AS SOCIAL ANALYSIS 205, 215-16 (1980).

21. *See* J. Morgan Kousser, *The Undermining of the First Reconstruction: Lessons for the Second, in* MINORITY VOTE DILUTION 27 (Chandler Davidson ed., 1984); J. Morgan Kousser, *The Voting Rights Act and the Two Reconstructions, in* CONTROVERSIES IN MINORITY VOTING 144 (Bernard Grofman & Chandler Davidson eds., 1992) [hereinafter Kousser, *The Voting Rights Act*] ("The third means of accomplishing the counterrevolution [against Reconstruction], structural discrimination, involved such tactics as gerrymandering, annexations, the substitution of at-large for single-member-district elections . . . and the adoption of nonstatutory white primaries.").

election units, plaintiffs typically sought a remedy that would divide the unit into several single-member ones, including an appropriate number of minority-dominated districts.

Since *Gingles,* however, a second type of challenge has emerged and become central. This newer challenge was the catalyst for the North Carolina districting scheme at issue in *Shaw.* As states in many parts of the country dismantled multimember districts, the focus of litigation began to shift toward the precise design of single-member districts. These cases are winding through the courts; as yet only a few reported decisions address VRA challenges to single-member district plans.[22] Indeed, not until this Term did the Supreme Court definitively hold that the *Gingles* criteria also control VRA challenges to single-member district plans.[23] Though *Gingles* now clearly applies, the precise way in which courts must adapt its criteria for single-member districts raises a battery of complex questions. As challenges to single-member districts come to dominate VRA litigation in the 1990s, the need for judicial resolution of these questions has become increasingly urgent.[24]

In applying *Gingles* to single-member districts, the most conceptually difficult issues for courts arise from the requirement that a minority group be "sufficiently large and geographically compact."[25] At

22. *See* GROFMAN ET AL., *supra* note 13, at 109 ("Indeed, since *Gingles* was decided in 1986, as of mid-1991 only a handful of Section 2 cases involving challenges to single-member districts had been decided, and only four of these had been reviewed at the appellate level.") (citations omitted).

23. Growe v. Emison, 113 S. Ct. 1075, 1084 (1993). In a major VRA decision, a three-judge district court had anticipated this holding while recognizing that courts could not directly apply *Gingles* to single-member districts without modification. *See* Jeffers v. Clinton, 730 F. Supp. 196 (E.D. Ark. 1989), *aff'd.,* 489 U.S. 1019 (1991):

> *Thornburg* and *Smith* cannot be automatically applied to the single-member context. . . . But the basic principle is the same. If lines are drawn that limit the number of majority-black single-member districts, and reasonably compact and contiguous majority-black districts could have been drawn, and if racial cohesiveness in voting is so great that, as a practical matter, black voters' preferences for black candidates are frustrated by this system of apportionment, the outlines of a Section 2 theory are made out.

730 F. Supp. at 205.

24. As one example, this Term the Court will address challenges to the redistricting of Florida's single-member house and senate districts. 62 U.S.L.W. 3261 (Oct. 12, 1993) (summarizing the dispute in Johnson v. De Grandy, No. 92-519, *prob. juris. noted,* 113 S. Ct. 1249 (1993)). A principal issue in that case is precisely how *Gingles* should be applied to single-member districts. The State of Florida argues that proof of the *Gingles* preconditions is necessary, but not sufficient, in single-member district challenges. As the reply brief notes: "[P]roof of the *Gingles* preconditions simply does not make out a *prima facie* case of vote dilution in the single-member context. The *Gingles* preconditions are plainly relevant in the single-member context because they establish causation, but they cannot play the same role they do in multimember district cases." Reply Brief for Appellant at 3, Johnson v. De Grandy, No. 92-519, *prob. juris. noted,* 113 S. Ct. 1249 (1993).

25. Thornburg v. Gingles, 478 U.S. 30, 50 (1986); *see also* GROFMAN ET AL., *supra* note 13, at 115-16 ("[T]wo of the *Gingles* prongs can probably be applied with little or no modification. . . . The first prong, however, is more difficult to modify in a suitable way.").

– Ex. 8820 –

this point the tension between territory and interest becomes most acute. In the multimember context, the conflict is more diminished because the existing district boundary lines define the limited geographic territory within which to locate replacement single-member districts. One must still define compactness, but within a relatively small, predefined physical territory. In contrast, in challenges to existing single-member districting plans for congressional or state legislative seats, the only fixed boundary lines are those of the state itself. Within those boundaries, an unlimited number of districting plans and individual district shapes are possible. Defining "geographically compact" in this context is more necessary and more difficult.

Such was the legal context in which North Carolina undertook the redrawing of its congressional districts in the wake of the 1990 Census. As a result of this census, the state was entitled to one additional U.S. congressional seat, bringing its delegation up to twelve. The effort to carve the state into twelve districts generated a mix of partisan and racial considerations increasingly common to redistricting. In North Carolina, the General Assembly controls redistricting, with the Governor having no veto power[26] or other entitlement to participate. During the redistricting of the 1990s, Democrats controlled both houses of the General Assembly, while the Governor was Republican,[27] and partisan interests had unusually free rein. In addition, in part as a direct result of *Gingles* itself, the power of the black legislative coalition in the General Assembly had grown.[28]

North Carolina's voting-age population is presently seventy-eight percent white and twenty percent black.[29] But the state's black population is relatively dispersed, with black residents a majority in only five of the state's one hundred counties. Because numerous counties in North Carolina have a history of discrimination with respect to voting, the VRA requires that the state submit any change in its voting practices or structures to the Attorney General for federal preclearance. This process is the section 5 preclearance review.[30]

26. Pope v. Blue, 809 F. Supp. 392, 394 (W.D.N.C.) (three-judge court), *aff'd.*, 113 S. Ct. 30 (1992).

27. 809 F. Supp. at 394.

28. Compare *Gingles,* 478 U.S. at 40, noting that no more than four percent of North Carolina's legislators were black in 1982 with JOINT CENTER FOR POL. & ECON. STUD., BLACK ELECTED OFFICIALS: A NATIONAL ROSTER, 1991, at xxiii tbl. 3 (20th ed. 1992), finding that the number of black North Carolina state legislators as of January, 1991 was 19, which is 11% of 170, the total number of legislators. 478 U.S. at 40.

29. Shaw v. Reno, 113 S. Ct. 2816, 2820 (1993).

30. Section 5 of the VRA prohibits the implementation of any changes affecting voting in certain jurisdictions that the Act covers without the approval of the Attorney General or a special three-judge federal district court in the District of Columbia. To receive preclearance, a

– Ex. 8821 –

The state's initial redistricting plan included one "convoluted"[31] district with a black majority; the unusual shape was necessary to protect the political base of white Democrat incumbents in adjoining districts.[32] When the state submitted this plan to the Justice Department, the Attorney General entered a formal objection and refused clearance. He offered several reasons for doing so, including the state's failure to create a second majority-black district "in the south central to southeastern part of the state," where creating such a district appeared feasible.[33] The Attorney General also commented that several alternative districting plans had been submitted to the Justice Department — at least one of which had been presented to the North Carolina General Assembly — that included a second majority-minority district in the southern part of the state. Noting that the state had been aware of the minority community's "significant interest" in creating a second majority-minority district, the Attorney General concluded that the state's failure to do so in its initial redistricting plan rested on what appeared to be " 'pretextual reasons.' "[34]

Rather than challenge this finding judicially, the North Carolina General Assembly adopted a new redistricting plan. This plan included a second majority-black district, with a total population of 56.63% black and a voting-age population of 53.34% black.[35] The new district, however, was not in the south-central to southeastern part of the state. Instead, the state created a 160-mile long district,

---

covered jurisdiction must establish that its proposed change does not have the purpose or effect of "denying or abridging the right to vote on account of race or color." 42 U.S.C. § 1973(c) (1982). Most jurisdictions prefer to seek preclearance from the Attorney General rather than a declaratory judgment in the special district court. *See* Drew S. Days III, *Section 5 and the Role of the Justice Department, in* CONTROVERSIES IN MINORITY VOTING, *supra* note 21, at 52, 53 n.2 (citing Justice Department statistics). For an extensive academic study of the § 5 process, see Hiroshi Motomura, *Preclearance Under Section Five of the Voting Rights Act,* 61 N.C. L. REV. 189 (1983).

31. *Cf.* Brief Amicus Curiae of the Republican National Committee in Support of Appellants at 9, Shaw v. Reno, 113 S. Ct. 2816 (1993) (No. 92-357).

32. Pope v. Blue, 809 F. Supp. 392, 394 (W.D.N.C.) (three-judge court) ("In order to protect white Democratic congressmen at the expense of Republicans, the General Assembly had to make [the majority-black] district very contorted."), *aff'd.,* 113 S. Ct. 30 (1992).

33. Brief for the Federal Appellees at 10a app. B, Shaw v. Reno, 113 S. Ct. 2816 (1993) (No. 92-357)).

> [T]he proposed configuration of the district boundary lines in the south-central to southeastern part of the state appear[s] to minimize minority voting strength given the significant minority population in this area of the state. In general, it appears that the state chose not to give effect to black and Native American voting strength in this area, even though it seems that boundary lines that were no more irregular than found elsewhere in the proposed plan could have been drawn to recognize such minority concentration in this part of the state.

Id.

34. *Shaw,* 113 S. Ct. at 2820 (citing Brief for Federal Appellees at 10a-11a app. B).

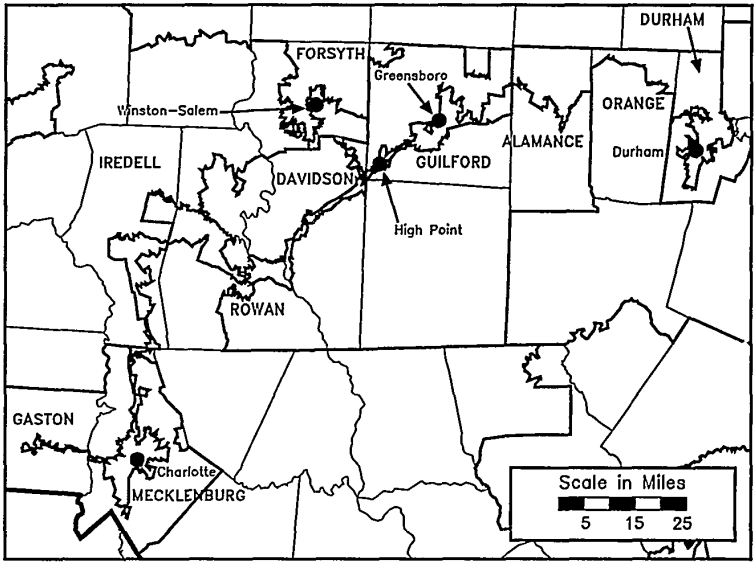
35. Brief for Federal Appellees at 15a-16a app. D.

winding through ten counties, often in a corridor no wider than Interstate Highway 85, which links the urban areas of Durham, Greensboro, Winston-Salem, and Charlotte.[36] This area became Congressional District 12 (District 12 or CD12), the focus of *Shaw*. The record suggests that the General Assembly drew the district this way to minimize the risk to incumbent congressmen from the creation of a second majority-black district.[37] On resubmission, the Attorney General precleared the new redistricting plan.[38] Figure 1, on the next page, provides a map of District 12.

Two significant consequences followed once the plan went into effect. First, in the 1992 congressional elections, North Carolina elected its first black representatives since Reconstruction. They were elected from the two majority-black districts in the plan, including District 12. Second, editorial writers feasted on District 12. In a label that was frequently repeated, the *Wall Street Journal* tagged it "political pornography."[39] The *Raleigh News and Observer* complained that it "plays hell with common sense and community."[40] In another editorial it argued: "The maps . . . don't make any sense to people who

36. Indeed, 80% of the district's residents live in cities with populations of 20,000 or more. In contrast, the other majority-black district, District 1, is predominantly rural. More than 80% of the residents in that district live outside cities with populations of 20,000 or more. Brief for Federal Appellees at 5 n.2.

37. *See Shaw*, 113 S. Ct. at 2841-42 n.10 (White, J., dissenting); *see also* text accompanying notes 116-32.



38. As long as states comply with their obligation to avoid minority-vote dilution, they generally retain policymaking discretion to draw their districts in accordance with their own assessment of state policy. States have no duty to "follow" the Attorney General's recommendations for the design of districts; in fact, the Attorney General does not make such recommendations. Although the Attorney General must determine that a majority-minority district is generally feasible to deny preclearance under § 5, this geographic determination is general and does not define any specific district design or location. *See* Drew S. Days, III & Lani Guinier, *Enforcement of Section 5 of the Voting Rights Act, in* MINORITY VOTE DILUTION, *supra* note 21, at 167, 171 ("[T]he department objective has not been to dictate any particular result.").

The Justice Department has consistently maintained that the VRA does not *require* extremely contorted and convoluted districts. As Drew Days, now Solicitor General, and Lani Guinier wrote in 1984, faced with a "set of facts in which it can be shown that no fairly drawn redistricting plan will result in minority control of one district because of dispersed minority residential patterns," the Justice Department's "response would not be to demand that the jurisdiction adopt a crazy-quilt, gerrymandered districting plan to ensure proportional minority representation." *Id.* At the same time, the § 5 preclearance review is limited to determining whether minority-vote dilution is taking place. If it is not, the Justice Department does not believe it has the authority to reject a plan merely because it employs contorted districts. *See, e.g.*, Letter from John R. Dunne, Assistant Attorney General, Civil Rights Division, U.S. Department of Justice (Nov. 18, 1991) (precleared Texas congressional redistricting plan at issue in Terrazas v. Slagle, 789 F. Supp. 828 (W.D. Tex. 1991), *aff'd.*, 112 S. Ct. 3019 (1992)), *quoted in* Brief Amicus Curiae of the Republican National Committee in Support of Appellants at 9-10 n.6, Shaw v. Reno, 113 S. Ct. 2816 (1993) (No. 92-357); *see also* John R. Dunne, *Remarks of John R. Dunne*, 14 CARDOZO L. REV. 1127 (1993).

have any sense."[41] Even some leading defenders of the VRA, clearly taken aback by the shape of District 12, suggested that it might violate the Constitution.[42]

B. *The Holding in* Shaw: *Vote-Dilution and District-Appearance Claims*

In *Shaw,* the Court concluded that District 12 did indeed raise serous enough constitutional concerns as to require justification under the exacting standards of strict scrutiny. To do so, the Court endorsed a distinction between two radically different kinds of voting-rights claims, each of which the Equal Protection Clause now recognizes.[43]

The first is a traditional "vote-dilution" claim. To establish such a claim under the Fourteenth Amendment, plaintiffs must prove the fa-

41. *Reading the "Inkblot,"* RALEIGH NEWS & OBSERVER, Jan. 21, 1992, at A8.

42. *See* Grofman, *Vince Lombardi, supra* note 7, at 1261 (leading expert witness in voting-rights cases describing his own affidavit in which he characterized North Carolina District 12 as a "crazy-quilt" lacking "rational state purpose").

43. A third kind of voting-rights claim, which was the first to arise historically, is a less frequent litigation subject today. This is the claim of a direct and outright deprivation of the individual right to vote, as in cases that challenged poll taxes and literary tests. *See, e.g.,* Guinn v. United States, 238 U.S. 347 (1915).

miliar requirements of discriminatory purpose and effect. Most important for our purposes, the relevant discriminatory effects must involve actual, material harm to the voting strength of an identifiable (and constitutionally protected) group. In the context of race, the Equal Protection Clause is violated only when an election structure "affects the political strength"[44] of a racial group by unduly diminishing its influence on the political process. This material injury — diminution of relative group political power — is the sine qua non of a vote-dilution claim.

Before *Shaw,* this claim might have been thought to exhaust the constitutional guarantees securing the voting rights of protected groups. Vote dilution was not merely one "type" of claim; it *defined* the very meaning of constitutionally protected voting rights and the nature of voting-related harms under the Constitution. *Shaw* now recognizes a distinct type of claim. This new claim entails a distinct conception of constitutional harms as well as a distinct, implicit theory of political representation.

We call this claim a *district appearance claim.* As we will explain,[45] the kind of injury it validates involves what we call expressive, rather than material, harms. The theory of voting rights it endorses centers on the perceived legitimacy of structures of political representation, rather than on the distribution of actual political power between racial or political groups. Vote-dilution and district-appearance claims share no common conceptual elements. They recognize distinct kinds of injuries, implicate different constitutional values, and reflect differing conceptions of the relationship between law and politics. These two claims cannot be assimilated into a single, unitary approach to the Fourteenth Amendment.[46]

---

44. City of Mobile v. Bolden, 446 U.S. 55, 83 (1980) (Stevens, J., concurring).

45. *See infra* text accompanying notes 90-96.

46. At several points, the Court directly signals its awareness that it is defining two distinct types of claims. The clearest example arises in the Court's discussion of United Jewish Orgs., Inc. v. Carey, 430 U.S. 144 (1977) [hereinafter *UJO*], the leading equal protection vote-dilution precedent.

In that case, New York, in response to Voting Rights Act violations, had adopted a 1974 reapportionment plan that redesigned state senate and assembly districts in Kings County. The new plan did not change the number of districts with nonwhite majorities, but the new districts redistributed minority voters in ways likely to enhance the effectiveness of their voting power. One result, however, was that the 30,000-member Hasidic Jewish community in Williamsburgh, which the previous plan had located entirely in one assembly and one senate district, was fragmented into two assembly and senate districts. On behalf of these voters, plaintiffs brought a complaint charging New York with violating the Constitution by deliberately revising its reapportionment plan along racial lines.

Writing for the plurality, Justice White rejected this claim on the ground that states can engage in race-conscious districting as long as they do not unfairly dilute the voting power of any racial group. *See* 430 U.S. at 165 ("[T]here was no fencing out of the white population from participation in the political processes of the county, and the plan did not minimize or unfairly

1. *Explaining District-Appearance Claims*

To begin to understand *Shaw,* one must first note that vote dilution is not involved in the case. The plaintiffs could not prove — and the Court acknowledged that they did not allege — vote dilution.[47] This conclusion is understandable, for no racial group in North Carolina could plausibly claim any material deprivation of its relative voting strength. Certainly white residents, who constitute seventy-six percent of the population in North Carolina[48] and approximately seventy-eight percent of its voting-age population,[49] could not claim impermissible dilution of their voting power. Under the statewide redistricting plan, white voters still constituted a majority in ten, or eighty-three percent, of the twelve congressional districts.[50] With effective control of more than a proportionate share of seats, white voters in North Carolina could not prove, and did not try to prove, that the redistricting plan diluted their relative voting power in intent or effect.

Second, *Shaw* does not express constitutional concern with the shape of election districts per se. The Court is clear that, no matter how bizarre or contorted, district appearances standing alone do not implicate the U.S. Constitution.[51] Colorful references to the shape of District 12 do permeate the opinion: "highly irregular,"[52] "tortured [and] dramatically irregular,"[53] "bizarre,"[54] and "irrational on its face."[55] Nevertheless, it is the conjunction of these features with race-

---

cancel out white voting strength."). Treating the Hasidic Jewish community as part of the white community for constitutional purposes, the plurality noted that the county's population was 65% white and that the new reapportionment plan left white majorities in control of 70% of the assembly and senate districts in the county. In the absence of vote dilution, the intentional use of race was not discriminatory and hence not a constitutional violation. 430 U.S. at 166 ("[A]s long as whites in Kings County, as a group, were provided with fair representation, we cannot conclude that there was a cognizable discrimination against whites or an abridgment of their right to vote on grounds of race.").

Shaw distinguishes *UJO* by categorizing it as a vote-dilution case and by recognizing an altogether different kind of claim: "*UJO*'s framework simply does not apply where, as here, a reapportionment plan is alleged to be so irrational on its face that it immediately offends principles of racial equality." Shaw v. Reno, 113 S. Ct. 2816, 2829 (1993). Unlike *UJO,* here the allegation is "that the plan, on its face, was so highly irregular that it rationally could be understood only as an effort to segregate voters by race." 113 S. Ct. at 2829. Hence, even in the absence of vote dilution, *Shaw* holds that the deliberate use of race can constitute unconstitutional discrimination with respect to voting rights.

– Ex. 8826 –

conscious districting that the Court condemned, not oddly shaped districts per se. Any other result would revolutionize the districting process because it would suddenly subordinate discretionary state policy choices to a *general* constitutional imperative concerning district shapes. Far from suggesting a principle of such broad sweep, the decision explicitly reaffirms that the Constitution does not impose on state reapportionment bodies any general requirement of compactness or contiguity.[56]

Third, *Shaw* also does not appear to condemn race-conscious districting per se.[57] This point is more ambiguous, both because much more hinges on this holding and because the opinion refrains from endorsing it explicitly. Moreover, when this question is confronted directly, the majority in *Shaw* might well divide over this question. Justice Kennedy, for example, has gone out of his way to reserve judgment on the constitutionality of section 2 of the Act.[58] Nonetheless, we believe *Shaw* is best read as an exceptional doctrine for aberrational contexts rather than as a prelude to a sweeping constitutional condemnation of race-conscious redistricting. In their contribution to this symposium, Professors Alex Aleinikoff and Samuel Issacharoff address this question in detail and reach the same conclusion.[59] We, however, can only briefly justify this view here.

First, if race-conscious districting per se were the constitutional problem, it is difficult to rationalize the architecture of the decision. The keystone in *Shaw* is the "highly irregular" shape of District 12. The negative pregnant, then, is that "regular" districts designed for race-conscious reasons do not raise similar constitutional concerns. Second, the Court's analysis builds on major precedents establishing that intentional race-conscious districting is not inherently unconstitutional. The Court finds constraints that apply in *Shaw* within these precedents or concludes that these cases address a distinct kind of claim and hence do not apply; it does not, however, call these deci-

56. 113 S. Ct. at 2827.

57. Our use of the term *condemn* is meant to focus on the ultimate question of whether a race-conscious intent invalidates such districts under the Constitution. Analytically, there are two stages to such an inquiry: whether *Shaw* requires strict scrutiny for such districts, and, if so, what kinds of justifications might suffice. Whichever way these formal questions are resolved, we believe *Shaw* does not stand for, or portend a sweeping proscription on, intentional race-conscious districting that does not involve actual vote dilution.

58. *See, e.g.*, Chisom v. Roemer, 111 S. Ct. 2354, 2376 (1991) (Kennedy, J., dissenting) (writing separately solely to reserve question of the constitutionality of § 2).

59. *See* T. Alexander Aleinikoff & Samuel Issacharoff, *Race and Redistricting: Drawing Constitutional Lines After* Shaw v. Reno, 92 MICH. L. REV. 588, 644 (1993) ("The Court's focus on a district's shape rather than the State's use of a racial classification will make the turn toward *Bakke* in the voting-rights field possible.").

– Ex. 8827 –

sions into question.[60] Third, at several points, the Court suggests that race-conscious redistricting is neither problematic nor a trigger for strict judicial scrutiny.[61] In addition, compliance with the VRA and *Gingles* necessarily requires race-conscious districting; *Shaw* does not suggest, at least directly, that the Court was questioning the restructuring of the political process that has resulted from reliance on the VRA and *Gingles.* At least to the extent race consciousness arises in connection with VRA compliance, *Shaw* appears to accept it.

The Court's decision in *Voinovich v. Quilter,*[62] also decided last Term, further supports the conclusion that *Shaw* is not a broad attack on race-conscious districting per se.[63] In *Quilter,* the Republican-dominated Ohio apportionment board had redistricted the Ohio legislature and, in the process, intentionally created several minority-dominated election districts. Plaintiffs claimed that these districts illegally

60. The most significant example is the Court's discussion of the plurality opinion in United Jewish Orgs., Inc. v. Carey, 430 U.S. 144 (1977). The *UJO* plurality held that "neither the Fourteenth nor the Fifteenth Amendment mandates any *per se* rule against using racial factors in districting and apportionment," 430 U.S. at 161; that "the permissible use of racial criteria is not confined to eliminating the effects of past discriminatory districting or apportionment," 430 U.S. at 161; that "a reapportionment cannot violate the Fourteenth or Fifteenth Amendment merely because a State uses specific numerical quotas in establishing a certain number of black majority districts," 460 U.S. at 162; and that, in the absence of vote dilution, the deliberate use of race to enhance underrepresented minority groups casts "no racial slur or stigma with respect to whites or any other race . . . ." 430 U.S. at 165. *Shaw* does not directly take issue with any of these principles, distance itself from them, or suggest *UJO* is no longer authoritative. Instead, *Shaw* concludes that *UJO* reached a certain holding, conditioned on particular principles, and *Shaw* then applies these conditions to evaluate the North Carolina districting plan. Thus, the Court quotes a passage in which the *UJO* plurality had held that a state, employing sound districting principles, might deliberately draw districts in a race-conscious way for the purpose of ensuring fair minority representation. *Shaw* simply concludes that North Carolina appeared not to have adhered to sound districting principles. *Shaw,* 113 S. Ct. at 2832. For further discussion of the Court's treatment of *UJO,* see *supra* note 46.

61. For example, the Court states:

> [R]edistricting differs from other kinds of state decisionmaking in that the legislature always is aware of race when it draws district lines, just as it is aware of age, economic status, religious and political persuasion, and a variety of other demographic factors. *That sort of race consciousness* does not lead inevitably to impermissible race discrimination.

113 S. Ct. at 2826 (emphasis added). The Court also affirms that "[t]he States certainly have a very strong interest in complying with federal antidiscrimination laws that are constitutionally valid as interpreted and as applied." 113 S. Ct. at 2830.

The Court does, however, obscure its position a bit in other passages that explicitly reserve judgment on one aspect of race-conscious districting: the intentional creation of majority-minority districts. 113 S. Ct. at 2828 ("Thus, we express no view as to whether 'the intentional creation of majority-minority districts, without more' always gives rise to an equal protection claim.") (quoting 113 S. Ct. at 2839 (White, J., dissenting)). One might read the Court's reservation of this question as casting doubt on this practice, even for reasonably compact districts. Any such reading, however, would be inconsistent with much else in the opinion as well as a direct attack on *Gingles.* That there is some ambiguity here might well reflect the divisions within the *Shaw* majority on these questions.

62. 113 S. Ct. 1149 (1993).

63. It should be disclosed that Professor Pildes was a legal consultant to the court-appointed special master in *Quilter.*

"packed" minority voters into a handful of districts, thereby diluting their potential power in other districts. The three-judge federal trial court agreed; it held that the VRA permits the intentional creation of minority-dominated districts only when such districts are necessary to remedy what would otherwise be a violation of the VRA.[64]

Quilter thus presented an inversion of the routine voting-rights case. Rather than claiming that Ohio had been insufficiently attentive to race, the plaintiffs argued that the state had been too attentive. The state had created too many minority districts that were too "safe" — presumably to pursue an underlying partisan agenda of enhancing Republican influence in other districts. Thus, the plaintiffs argued that race-conscious districting over and above what the VRA requires violates the Act and the Constitution.

The Supreme Court unanimously rejected this argument. In doing so, the Court directly contradicted the three-judge court's view that the VRA establishes both a floor and a ceiling on race-conscious districting.[65] As the Court held, "federal courts may not order the creation of majority-minority districts unless necessary to remedy a violation of federal law. But that does not mean that the State's powers are similarly limited. Quite the opposite is true . . . ."[66] The VRA therefore does not limit state redistricters only to remedial uses of race. As long as no illegal vote dilution occurs, states do not violate the Act, no matter how race conscious they might be in designing election districts.[67] Under the VRA, states need not first confess or prove past discrimination in election practices to justify their race-conscious creation of districts — indeed, they need not justify these districts to federal courts at all.

If this were all there were to *Quilter,* the meaning of *Shaw* would be clear: in the absence of vote dilution, race-conscious districting, in and of itself, would pose no legal problems. Only when carried to particular kinds of extremes, as in *Shaw,* would distinctive constitutional issues arise. But *Quilter* is not quite this transparent. The Court expressly reserved the question of whether race-conscious redistricting per se might violate the Fourteenth or Fifteenth Amendments.[68] Conceivably, then, the Court could hold that, while Ohio's

64. 113 S. Ct. at 1153.

65. 113 S. Ct. at 1156.

66. 113 S. Ct. at 1156 (citations omitted).

67. In *Quilter,* the district court had found no racially polarized voting in the relevant areas of Ohio. In the absence of polarized voting, the Court recognized that black and white voters are essentially fungible; race-conscious districting cannot have a dilutive effect when voting patterns are not structured along racial lines. 113 S. Ct. at 1158.

68. 113 S. Ct. at 1157-59.

redistricting efforts do not violate the VRA, they do violate the Constitution.

Yet, while legally possible, this result seems unlikely. The sitting Ohio legislature is now composed through the electoral scheme *Quilter* upholds. If the Court believed there were serious constitutional questions with the fundamental structure of this scheme, the Court had numerous means to avoid permitting an unconstitutionally composed legislature to assume power. Indeed, the parties expressly asked the Court to decide the broad Fifteenth Amendment issue, but the Court found extremely narrow grounds on which to resolve that claim.[69] The Court could have asked the parties to address or reargue the Fourteenth Amendment issue. We view the Court's reservation of the constitutional issues as expressing the caution and tentativeness that characterizes the current Court's approach to race, as well as the divisions within the Court itself. But we take the tenor of *Quilter* as further evidence that a majority of the Court is not prepared to find a general ban on race-conscious districting in the Constitution.

Thus, *Shaw* does not appear to erect a general constitutional barrier to intentionally race-conscious districting that has no dilutive effect. To be sure, many more subtle questions remain regarding the precise circumstances under which redistricting bodies and courts may take race into account — remedially or affirmatively — when designing districts. We address these more nuanced questions in Part V. But, at this stage, the important point is that *Shaw* does not appear to rest on any general principle condemning race-conscious districting. Although many initial reactions have neglected this side of *Shaw*,[70] it is one of the decision's most significant aspects. Given that several members of the current Court are resistant to state departures from the color-blindness ideal in other contexts[71] and that Justices Marshall and Brennan have retired, one might have thought the Court would

69. Thus, the Court held that the district court had been clearly erroneous in finding a race-conscious intent behind the districting plan and then stated, "we express no view on the relationship between the Fifteenth Amendment and race-conscious redistricting." 113 S. Ct. at 1159.

70. As might be expected, the immediate reaction in the popular press tended to portray the decision in *Shaw* as a broad attack on race consciousness in districting, indeed on the fundamental principles of the Voting Rights Act itself. *See, e.g.*, Max Boot, *Supreme Court Rules that "Bizarre" Districts May Be Gerrymanders*, CHRISTIAN SCI. MONITOR, June 30, 1993, at 7 (*Shaw* "throws into doubt the way the Justice Department has been enforcing the 1965 Voting Rights Act, designed to guarantee minorities political representation."); Linda Greenhouse, *The Supreme Court: Reapportionment; Court Questions Districts Drawn To Aid Minorities*, N.Y. TIMES, June 29, 1993, at A1 ("A sharply divided Supreme Court ruled today that designing legislative districts to increase black representation can violate the constitutional rights of white voters."); Dick Lehr, *Court Casts Doubts over Race-Based Redistricting*, BOSTON GLOBE, June 29, 1993, at 1 ("The US Supreme Court . . . ruled yesterday that congressional districts designed to give minorities a voting majority may be unconstitutional . . . .").

71. *See, e.g.*, Metro Broadcasting Inc. v. FCC, 497 U.S. 547, 602-31 (1991) (O'Connor, J.,

revisit the constitutionality of the race-conscious districting process that forms the core of the VRA. After *Shaw,* however, five Justices do not appear to be prepared to do so.

Instead, only those irregular districts that convey one particular impression — or that are chosen on the grounds of one particular set of reasons or motivations — implicate *Shaw.* The districting plan must be "so extremely irregular on its face that it rationally can be viewed only as an effort to segregate the races for purposes of voting";[72] it must be "so bizarre on its face that it is 'unexplainable on grounds other than race.' "[73] Rather than standing for any simple prohibition of "racial gerrymandering," *Shaw* distinguishes two types of "racial gerrymanders." Some districts — highly irregular ones — trigger the extreme demands of strict scrutiny; others raise no special constitutional problem. In dissent, Justice White perfectly captured, we believe, the decision's internal logic: *Shaw* holds that "race-conscious redistricting that 'segregates' by drawing oddly shaped lines is qualitatively different from race-conscious redistricting that affects groups in some other way."[74]

Justice White means this description to be an ironic commentary on *Shaw*'s analysis, the exposure of a "logic" the mere expression of which immediately indicts itself as incoherent. Those who must work with *Shaw,* however, will have to find the principles the Court intended to drive this logic. What precisely about these particular kinds of election districts poses unique constitutional problems? What distinct injury do such districts cause?

2. *Justifying District-Appearance Claims: The Relevance of Value Pluralism*

Policymaking processes can be constitutionally flawed in at least three different ways. They might reflect an unconstitutional purpose or, equivalently, take a constitutionally impermissible factor into account. This danger is addressed through constitutional doctrines focused on the search for legislative motivation and purpose. Second, policymaking might take only legitimate factors into account but give too little weight to constitutional rights or too much weight to insubstantial governmental justifications for regulation. Balancing tests re-

dissenting); 497 U.S. at 631-38 (Kennedy, J., dissenting); City of Richmond v. J.A. Croson Co., 488 U.S. 469 (1989).

72. Shaw v. Reno, 113 S. Ct. 2816, 2824 (1993).

73. 113 S. Ct. at 2825 (quoting Village of Arlington Heights v. Metropolitan Hous. Dev. Corp., 429 U.S. 252, 266 (1977)).

74. 113 S. Ct. at 2838 (White, J., dissenting).

flect concern for the effects of these kinds of policy; such tests typically evaluate whether the governmental justifications for regulation are sufficiently appropriate and significant to justify the degree to which a policy restrains a right. Because the first set of doctrines focuses on purposes, while the second focuses on effects, these might be thought to exhaust the basic modes through which constitutional law can appraise governmental action. Yet there is a third, less familiar type of constitutional problem that policies might raise; in some ways this problem shares concern for both purposes and effects, but it arguably has a distinct logic of its own.

One might call this the problem of *value reductionism* in public policy. The concern is not that policymakers have taken illegitimate factors into account, nor is it precisely that a policy's effects on rights are too restrictive or not sufficiently justified. Instead, the constitutional problem is better described as the apparent corruption of a decisionmaking process. More broadly, it is the apparent corruption of the public institutions that make their decisions in such a way. When decisions reflect value reductionism, policymakers have transformed a decision process that ought to involve multiple values — as a matter of constitutional law — and reduced it to a one-dimensional problem. They have permitted one value to subordinate all other relevant values. As a result, the decisionmaking process appears tainted because it has become compromised through unconstitutional oversimplification. Interestingly, the concern for public perceptions ultimately seems central to constitutional doctrines that resist value-reductionist public policy. The focus of these doctrines is not impermissible purposes, for they need not be present, nor whether the effect of policy is too great an intrusion on individual rights, but rather whether the process of decisionmaking itself is constitutionally legitimate.

Shaw is best understood, we believe, as an opinion condemning value reductionism. In the Court's view, the process of designing election districts violates the Constitution not when race-conscious lines are drawn, but when race consciousness dominates the process too extensively. Traditionally, redistricting seeks to realize a plurality of values: to ensure effective representation for communities of interest, to reflect the political boundaries of existing jurisdictions, and to provide a district whose geography facilitates efficient campaigning and tolerably close connections between officeholders and citizens.[75] The inten-

75. Redistricting is, of course, among the most intensely partisan of all policymaking, and those who control the process typically pursue the more directly partisan values of trying to maximize their party's influence. In addition, redistricters, including nonpartisan bodies, also frequently try to protect incumbent officeholders. When the redistricting is partisan, one party's incumbents may receive differential protection.

– Ex. 8832 –

tional use of race in this process, in conjunction with continuing respect for these other values, does not pose a constitutional problem. Under *Shaw,* race is not an impermissible factor that corrupts the districting process — as long as it is one among many factors that policymakers use.

When race becomes the single dominant value to which the process subordinates all others, however, it triggers *Shaw.* For the Court, what distinguishes "bizarre" race-conscious districts is the signal they send out that, to government officials, race has become paramount and dwarfed all other, traditionally relevant criteria. This view is the foundation of the qualitative distinction central to *Shaw:* at a certain point, the use of race can amount to value reductionism that creates the social impression that one legitimate value has come to dominate all others.

In resisting the use of race *in this specific way, Shaw* requires that redistricting continue to be understood — and, perhaps more importantly, perceived[76] — as implicating multiple values. Public officials must maintain this commitment to value pluralism, even when they legitimately and intentionally take race into account.

What precisely are the relevant public understandings concerning democratic institutions that "bizarre" race-conscious districts might violate? Critically, we might say *Shaw* elevates trivial concerns for "pretty" districts over substantive values of effective minority representation. There are no "naturally shaped" districts, so why should there suddenly be constitutional obstacles at the extremes of the districting process?

One answer might be that the values extreme districts inappropriately compromise are those of political community and political accountability. A principal aim of territorial districting is to facilitate the representation and interests of political communities. Compact districting is at best a proxy for this goal, but to abandon compactness completely might be thought to denigrate the importance of political community as a public value. In addition, because compact districting is thought, at least traditionally, to enhance political ties between representatives and constituents, abandoning compactness might be thought to undermine the value of representation.[77]

---

76. *See infra* notes 91-95 and accompanying text.

77. For one of the most extensive case law discussions of the values compact districting serves, see Prosser v. Elections Bd., 793 F. Supp. 859, 863 (W.D. Wis. 1992) (three-judge court; per curiam):

> The objections to bizarre-looking reapportionment maps are not aesthetic (except for those who prefer Mondrian to Pollock). They are based on a recognition that representative democracy cannot be achieved merely by assuring population equality across districts. To be

But this answer seems strained in the context of *Shaw*. If the question is whether the oddly shaped District 12 undermines a sense of political connectedness, unduly burdens those running for office, or weakens representative-constituent ties, we might think state political institutions are best positioned to answer it. Framed in these terms, the Court's concern might seem paternalistic. Moreover, given that District 12 resulted in the election of one of two of North Carolina's first black congressional representatives since Reconstruction, concerns for political community and identifiable representation might seem misplaced.

Perhaps a better answer would start with the view that, in the Court's eyes, oddly shaped race-conscious districts compromise the values of political integrity and legitimacy. While there may be no "natural district shapes," baseline expectations emerge from developed customs and practices. Social understandings, including those concerning the legitimacy of political institutions, are formed with reference to these developed practices. Except in revolutionary moments, political legitimacy is, in part, a matter of compliance with the internal standards of these developed practices. When political bodies devise extremely contorted districting schemes, the violation of these standards suggests politicians are engaged in manipulation of public institutions for their own ends.

When race is added, the mix becomes more combustible and, in the Court's view, the Constitution enters the picture. The concern seems to be that extreme distortions in the (socially constructed) nature of territorial districting, which result from race dominating all other districting values, pose the kind of threat to political legitimacy that the Constitution recognizes. Democratic theory might accommodate either proportional representation or territorial districting. But, as Professors Daniel Polsby and Robert Popper's contribution to this symposium suggests, trying to force the kinds of concerns a proportional-representation system addresses into a territorial system eventually stretches the latter to the breaking point.[78] Short of opting for an interest-based system of representation, public understandings about

an effective representative, a legislator must represent a district that has a reasonable homogeneity of needs and interests; otherwise the policies he supports will not represent the preferences of most of his constituents. There is some although of course not a complete correlation between geographical propinquity and community of interests, and therefore compactness and contiguity are desirable features in a redistricting plan. Compactness and contiguity also reduce travel time and costs, and therefore make it easier for candidates for the legislature to campaign for office and once elected to maintain close and continuing contact with the people they represent.

78. Daniel D. Polsby & Robert D. Popper, *Ugly: An Inquiry into the Problem of Racial Gerrymandering Under the Voting Rights Act*, 92 MICH. L. REV. 652, 670-71, 676-78 (1993). This can be viewed as one of the central themes of Lani Guinier's scholarship. *See, e.g.* Lani

– Ex. 8834 –

political legitimacy will reflect the nature of territorial districting, as that form is understood. On this view, the failure to respect value pluralism in territorial redistricting compromises the integrity and legitimacy of the resulting institutions.

This account of *Shaw*'s principles will no doubt leave the decision controversial. In today's culture, we often cannot talk about "the" political legitimacy of institutions, for legitimacy is frequently differential — institutions legitimate from some groups' perspectives might not be from others'. If the "highly irregular" District 12 was actually necessary to ensure a second representative of the black community in North Carolina, that community might well view the districting plan that included District 12 as more legitimate than alternatives. Political legitimacy is also a nebulous concept, into which it is all too easy to read one's own views. Nonetheless, the legitimacy of representative institutions at least seems the kind of question that is properly the concern of the Court — this concern is, after all, at the foundation of the reapportionment revolution itself.[79] *Shaw* requires respect for value pluralism as a means, it seems, of ensuring that constitutional concerns for political legitimacy are not ignored or undermined in the process of enhancing minority representation.

Understood in this way, Justice O'Connor's opinion in *Shaw* resonates with Justice Powell's opinion in *Regents of the University of California v. Bakke*.[80] The preference-quota distinction similarly permits noninvidious uses of race, as long as policymakers do not allow race to become — or appear to be — paramount to all other relevant values. When *Bakke* was decided, some praised this approach as "an act of judicial statesmanship" and "a very civilized ruling."[81] Others asserted that the preference-quota distinction was at best symbolic and at worst hypocritical — a distinction that reflected no principled theoretical line and that had no functional significance for the way in which academic institutions actually would make admissions deci-

81. *See* Jerold K. Footlick et al., *The Landmark* Bakke *Ruling*, NEWSWEEK, July 10, 1978, at 19, 20, 25 (quoting Alan Dershowitz as stating that *Bakke* was "an act of judicial statesmanship"; A.E. (Dick) Howard as terming *Bakke* "a 'Solomonic' compromise"; Benno Schmidt, Jr., as calling the decision "just about right"; and Charles Alan Wright terming *Bakke* "a very civilized ruling"); Bakke *Wins, Quotas Lose*, TIME, July 10, 1978, at 8, 9 (quoting Paul Freund as believing the fuzziness of the decision was "a good thing").

– Ex. 8835 –

sions.[82] Whatever the merits of these views, the distinction has had enough enduring power so that, fifteen years later, it remains an important element in public discourse about race. Virtually no public official endorses racial quotas, even when advocating the preferential use of race. Perhaps *Bakke* is the sole cause of this way of structuring public discourse; but, if the legal distinction had indeed failed to capture something powerful among public perceptions, at least in some quarters, perhaps it would not have had such a long life.[83]

Methodologically, one can view both *Shaw* and *Bakke* as rejecting a categorical, rule-oriented form of legal decision for a more contextualized, standard-based approach.[84] Neither decision establishes a categorical rule prohibiting intentional race consciousness. The relevant questions are ones of degree: race can be used, but how much weight it is given in relation to other values remains subject to searching judicial inquiry. This contextual approach to constitutional adjudication that links *Shaw* and *Bakke* — this commitment to viewing the Fourteenth Amendment as standing against value reductionism — can be understood as an effort to seize and defend a legal middle ground between logically coherent alternatives. At one pole is the principle of color blindness. At the other is the principle of the preferential use of race to enhance the political or economic position of previously disadvantaged minorities. Each alternative rests on its own moral, sociological, and ideological convictions, and many people believe law and policy must come to one clear choice between those alternatives. Yet *Shaw,* like *Bakke,* opts for neither option; rather, it sustains the tension between the two. The principle of *Shaw* is that districters may intentionally take race into account, but only up to the point at which they subordinate all other relevant values to it. Geography and interest are both permissible grounds for constructing election districts, as

82. *Cf.* RONALD DWORKIN, TAKING RIGHTS SERIOUSLY 223-39 (1977). *See generally* Vincent Blasi, Bakke *as Precedent: Does Mr. Justice Powell Have a Theory?,* 67 CAL. L. REV. 21 (1979) (developing arguments against the distinction).

83. Despite the rhetoric of public officials, some recent polling data suggest that individuals may not find a significant distinction between preferences and quotas. At the time of the legislative debates over the Civil Rights Act of 1991, Pub. L. No. 102-166, 105 Stat. 1071, 1075-76 (1991) (codified at 42 U.S.C. §§ 2000e to 2000e-16 (Supp. III 1991)), one poll reported that 88% of whites were opposed to "racial preferences," even in the absence of "rigid quotas." Tom Kenworthy & Thomas B. Edsall, *Whites See Jobs on Line in Debate: Some Chicagoans Fear Reverse Bias,* WASH. POST, June 4, 1991, at A1. Public opinion polls on affirmative action, however, are notoriously sensitive to the precise phrasing of questions and the context in which they are posed.

84. *See, e.g.,* Frederick Schauer, *The Rules of Jurisprudence: A Reply,* 14 HARV. J.L. & PUB. POLY. 839 (1991); Kathleen M. Sullivan, *Foreword: The Justices of Rules and Standards,* 106 HARV. L. REV. 22 (1992).

long as the districting process is not reduced to a single-dimensional process in which interest appears to dominate overwhelmingly.

In considering whether the Court is right to be concerned about value reductionism in public policy,[85] in *Shaw* or elsewhere, it might be helpful to recall the analysis of complex value choices that Professors Guido Calabresi and Philip Bobbitt offer in *Tragic Choices.*[86] In their analysis, societies that endorse a plurality of values, all of them fundamental, must necessarily confront situations of profound value conflict. Faced with such a conflict, society may simply choose to adopt policies that endorse one value over the others at stake. This approach, however, entails rejecting decisively some values that are, and ought to be, considered fundamental. As an alternative, therefore, societies might seek institutions and methods of reaching decisions that preserve the social and political understandings through which they recognize all the values in conflict as fundamental and enduring. One possibility is that public decisions can cycle between preferences for the different values at stake. Alternatively, policymakers might accommodate certain values up to a point, but stop short of following them to their logical conclusion, as a way of signaling respect for countervailing values.[87]

From a certain perspective, these decisions will look inconsistent, or unprincipled, or like compromises having little logical foundation. Indeed, more formal or analytic evaluations of policymaking often generate just such criticisms.[88] But this kind of fuzzy logic in the public sphere may be a healthy means through which societies embracing

85. Even if this concern is appropriate in evaluating policy for some purposes, whether courts should interpret particular provisions of the Constitution to embody such concerns is a distinct question. The analysis of that question requires close attention to the text, history, purposes, and prior interpretations of particular provisions — a task this article does not undertake.

86. GUIDO CALABRESI & PHILIP BOBBITT, TRAGIC CHOICES (1978).

87. Calabresi and Bobbitt term these a "strategy of successive moves," *id.* at 195, but the language of strategy might suggest a greater role for conscious intent and choice than is warranted. In healthy societies, the effect of the complex mix of public institutions and actors involved in policymaking may be to mediate these fundamental value conflicts through producing outcomes that oscillate between the relevant values, even when no particular actor intends such a result and when institutions are not specifically designed to produce this pattern of outcomes.

88. For example, Arrow's Theorem reveals that, in theory, public decisionmaking processes cannot be designed in ways that are fair and that preclude the possibility that decisions will cycle among various options (at least under conditions of significant social conflict). Based on this discovery, some scholars indict collective decisionmaking institutions for being unable to guarantee consistent policy outcomes. In contrast, one of us has argued that this kind of cycling might be a healthy means of sustaining the tension between fundamental values, rather than a weakness of democratic institutions. *See* Richard H. Pildes & Elizabeth S. Anderson, *Slinging Arrows at Democracy: Social Choice Theory, Value Pluralism, and Democratic Politics,* 90 COLUM. L. REV. 2121, 2171-75 (1990). As Calabresi and Bobbitt put it, "a society may limit the destructive impact of tragic choices by choosing to mix approaches over time." CALABRESI & BOBBITT, *supra* note 86, at 196.

pluralistic values of fundamental significance address tragic choices — they sustain the tension between conflicting values, rather than allowing circumstances to force them finally to endorse one fundamental value over another. By avoiding value-reductionist approaches when such values clash, public decisions can help, in the words of Calabresi and Bobbitt, "preserve the moral foundations of social collaboration."[89]

If *Shaw* is to be justified, we believe the justification must proceed along these lines. On any other terms, *Shaw*'s effort to distinguish race-conscious districting that produces bizarrely shaped districts from that which produces more familiar districts is difficult to comprehend. As the dissenters persuasively argue, one does not involve a more invidious use of race than the other, nor does one differ meaningfully from the other in its effect on individuals' voting rights. Carrying legal analysis to its logical extreme, however, may not be the most important task of the Supreme Court — at least as judges such as Justices O'Connor and Powell understand the functions of the Court and, perhaps, of law itself. *Shaw* rests on the view that, in certain areas, the Court's role in construing the Constitution should be to require policymakers to accommodate and sustain the tension between conflicting values, rather than to permit one important value to subordinate all others.

3. *Expressive Harms as Constitutional Injuries*

To appreciate this interpretation of *Shaw,* however, is not yet to grasp the precise harm that the *Shaw* Court believes this value reductionism causes. Allan Bakke could allege the harm of being denied the right to compete on equal terms for medical school admission — an alleged harm that is concrete, individualized, and material. But, because no North Carolina voters had their voting power diluted, one cannot say a similar injury occurred. Even a districting process that involves the kind of value reductionism we have described does not result in tangible, individualized harm, the kind of harm traditionally considered necessary to create standing.[90] To understand and apply *Shaw,* then, we must link the Court's evident concern with value reductionism to a different conception of harm.

One can only understand *Shaw,* we believe, in terms of a view that what we call *expressive* harms are constitutionally cognizable. An expressive harm is one that results from the ideas or attitudes expressed

89. *Id.* at 18.

90. *See infra* note 105 and accompanying text (discussing "irreducible minimum" in the standing context).

through a governmental action, rather than from the more tangible or material consequences the action brings about. On this view, the *meaning* of a governmental action is just as important as what that action *does*. Public policies can violate the Constitution not only because they bring about concrete costs, but because the very meaning they convey demonstrates inappropriate respect for relevant public values. On this unusual conception of constitutional harm, when a governmental action expresses disrespect for such values, it can violate the Constitution.

Concern for expressive harms focuses on the interpretive dimension of public action. This is the dimension along which such injuries lie, for expressive harms are violations of public understandings and norms. In the language of Robert Cover, "[w]e inhabit a *nomos* — a normative universe."[91] Judicial validation of expressive harms reflects concern for the way in which public action can cause injury precisely by distorting or undermining this *nomos*. The harm is not concrete to particular individuals, singled out for distinct burdens. The harm instead lies in the disruption to constitutionally underwritten public understandings about the appropriate structure of values in some arena of public action.

Expressive harms are therefore, in general, social rather than individual. Their primary effect is not as much the tangible burdens they impose on particular individuals, but the way in which they undermine collective understandings. Governmental action might be thought to implicate these understandings in two ways. When government acts, it must interpret relevant collective understandings insofar as they constrain or guide policymakers. But public action and collective understandings exert a mutually reciprocal influence. Government action does not merely reflect such understandings; it also shapes and reconstitutes them. Governmental actions can express — and therefore perhaps sustain — a reaffirmation or a rejection of these norms. A concern for expressive harms under the Constitution is a concern for precisely these less material, less individualized effects of state action.

If courts grant expressive harms constitutional recognition, they must then engage in exquisitely difficult acts of interpretation. For the material to be interpreted is not a legal text, but the expressive significance or social meaning that a particular governmental action has in the specific historical, political, and social context in which it takes

91. Robert M. Cover, *The Supreme Court, 1982 Term — Foreword:* Nomos *and Narrative*, 97 HARV. L. REV. 4, 4 (1983).

– Ex. 8839 –

place. The quest is not for the intent or purpose behind legislation, at least as those concepts have traditionally been understood; the issue is not what policymakers might subjectively have had in mind or desired. What matters is the social message their action conveys or, less positivistically, the message courts perceive the action to convey. This approach requires courts to attribute a likely social meaning to the action, rather than to discover the subjective intent behind it.[92] Such exercises of judicial judgment are fraught with complexity and unlikely to yield determinate, single right answers. But courts have not found these potential problems to be reason enough to abandon all judicial concern for expressive harms.

This analysis might sound unfamiliar and obscure. *Shaw,* however, becomes intelligible only if one recognizes that it rests on just this concern for expressive harms. *Shaw* validates such harms as constitutionally cognizable, along with more familiar, concrete, material injuries. Indeed, close attention to the language of Justice O'Connor's opinion reveals a constant struggle to articulate exactly these sorts of expressive harms. Thus, the opinion is laden with references to the social perceptions, the messages, and the governmental reinforcement of values that the Court believes North Carolina's districting scheme conveys.[93] There is simply no way to make sense of these references, which give the opinion its character and are central to its holding,

92. Actual intent, to the extent knowable, might be relevant evidence, but it is not the ultimate question at issue.

93. Among the passages in which the Court emphasizes social perceptions, the messages the districting plan conveys, and the way in which the plan is likely to affect collective understandings are the following:

(1) "The message that such districting sends to elected representatives is equally pernicious."

(2) "When a district obviously is created solely to effectuate the perceived common interests of one racial group, elected officials are more likely to believe that their primary obligation is to represent only the members of that group, rather than their constituency as a whole."

(3) "[The plan is] so highly irregular that, on its face, it rationally cannot be understood as anything other than an effort to 'segregat[e] . . . voters' on the basis of race."

Shaw v. Reno, 113 S. Ct. 2826, 2826-27 (1993) (quoting Gomillion v. Lightfoot, 364 U.S. 339, 341 (1960)).

Note also the frequent references to "reinforcing perceptions," or "reinforcing beliefs," as in the following:

(4) "[The plan] reinforces racial stereotypes and threatens to undermine our system of representative democracy by signaling to elected officials that they represent a particular racial group rather than their constituency as a whole."

113 S. Ct. at 2828.

Similarly, notice the Court's use of the language of "offense," which is commonly associated with expressive concerns:

(5) "[The] reapportionment plan is alleged to be so irrational on its face that it immediately offends principles of racial equality."

113 S. Ct. at 2829.

These passages and others, central to the opinion, are most convincingly explained only by recognizing that it is expressive harms that concern the Court in *Shaw.*

without recognizing that the decision is grounded in concern for expressive harms. This conception of constitutionally cognizable harms explains why the Court is adamant that "reapportionment is one area in which appearances do matter."[94] If they do, it must be because, even apart from any concrete harm to individual voters, such appearances themselves express a value structure that offends constitutional principles.

Shaw therefore rests on the principle that, when government appears to use race in the redistricting context in a way that subordinates all other relevant values, the state has impermissibly endorsed too dominant a role for race.[95] The constitutional harm must lie in this endorsement itself: the very expression of this kind of value reductionism becomes the constitutional violation. The justification for this result might rest on the intrinsic ground that the endorsement is wrong, in and of itself; alternatively, the justification might rest on the instrumental ground that this state endorsement threatens to reshape social perceptions along similar lines.

In either case, *Shaw* depends crucially on judicial recognition of expressive harms under the Fourteenth Amendment.[96] This concep-

94. 113 S. Ct. at 2827.

95. Vincent Blasi suggests that a similar, expressively oriented rationale provides the best explanation for Justice Powell's opinion in *Bakke,* although Blasi focuses primarily on the instrumental, rather than the intrinsic, justifications for such a rationale. Blasi, *supra* note 82, at 59 ("Perhaps Powell is saying that appearances are what matter most because the critical value is the longrun diminution of racial prejudice throughout the society and, depending on how they are perceived by the public, different race-conscious programs may have quite different effects on the racial attitudes of the populace."). Blasi then criticizes such an approach to constitutional doctrine on the familiar grounds that purported social perceptions are too uncertain a basis for constitutional doctrine. *Id.* at 60. In addition, he argues that responding to these perceptions by purporting to distinguish between race-as-one-factor and race-as-a-dominant-factor entails public hypocrisy, which Blasi views as "inevitably . . . corrupting." *Id.*

96. A similar idea underlies Charles Lawrence's revisionist account of Brown v. Board of Educ., 347 U.S. 483 (1954), an account that Lawrence then uses to argue for the constitutionality of regulating racist speech. *See* Charles R. Lawrence III, *If He Hollers Let Him Go: Regulating Racist Speech on Campus,* 1990 DUKE L.J. 431. Lawrence argues that school segregation was unconstitutional precisely because of its expressive dimension or its cultural meaning. "*Brown* held that segregated schools were unconstitutional primarily because of the *message* segregation conveys — the message that black children are an untouchable caste, unfit to be educated with white children." *Id.* at 439. In Lawrence's view, *Brown* therefore stands for the principle that "the systematic group defamation of segregation be disestablished," *id.* at 441, and that "*Brown* is a case about group defamation." *Id.* at 463. To reach this conclusion, he argues that the "nonspeech elements [of school segregation were] by-products of the main message rather than the message simply a by-product of unlawful conduct." *Id.* at 441.

This emphasis on cultural meanings as legally cognizable harms captures an important and neglected aspect of *Brown* and constitutional doctrine more generally. At the same time, *Brown* might exemplify this point less sharply than other examples. In *Brown,* the Court accepted lower court findings that " 'tangible' factors" were equal between the white and black schools at issue but relied on inequalities in "intangible considerations." 347 U.S. at 492-93. Moreover, the Court cannot have been unaware of the process by which states scrambled to bring particular black schools up to equivalent standards as they became subject to litigation. *Brown* might well be justified as a means of ensuring, without the need for case-by-case litigation, that state re-

tion of constitutional harm is intriguing and undoubtedly controversial. To describe and evaluate it in detail would require considerable space. For present purposes, we merely note three brief features of this conception.

a. Legal recognition of expressive harms. Though this conception of harm might at first appear unfamiliar and vague, it is implicitly recognized in many areas of law and public policy. The general distinction between intentional and accidental harms is the most routine example. In torts and criminal law, an intentional and a negligent battery might cause the same quantum of physical injury. Yet common and criminal law understandably treat the former as far more serious. Even if they cause the same objective level of physical injury, the law considers these to be two distinct actions; the distinction rests in the different attitude that an intentional harm expresses toward social norms of individual integrity. Conceivably, the more serious sanctions for intentional harms might be justified as necessary to create optimal deterrence of such actions. But, even apart from incentive-altering calculations, the attitudes expressed through conduct intentionally designed to injure pose a greater challenge to the normative structure underlying social order. The greater challenge such conduct expresses requires a commensurately greater response in the legal sanctions applied — independent of deterrence rationales for greater sanctions. Intentional harms are morally more offensive than accidental ones, and the law reflects this difference in moral evaluation.

For a more interesting and complex example of the difference between expressive and consequential conceptions of harm, consider sentence enhancements for bias-motivated crimes, at issue last Term in *Wisconsin v. Mitchell.*[97] From a consequentialist perspective, we

sources for education would not be discriminatorily allocated. *See* GEOFFREY R. STONE ET AL., CONSTITUTIONAL LAW 503 (2d ed. 1991) (asking whether pre-*Brown* doctrine, "by requiring the courts to evaluate the level of 'equality' in thousands of segregated school systems throughout the country, [might] have produced an even more serious judicial intrusion on the political branches than *Brown*").

As a more elemental illustration, consider instead segregation in public accommodations, such as movie theaters. In this case there can be little claim of comparatively disadvantageous allocation of material benefits between white and black viewers; both groups see the identical movie, albeit from different physical locations. Even if we imagine a situation in which the seating locations did not reflect a social hierarchy (as they do when whites sit in front, blacks in the back or the balcony), such a state-mandated seating distribution along racial lines would surely violate the Constitution. In these contexts, the only reason that the seating segregation is illegal and immoral must be because of its expressive significance or, in Lawrence's words, its cultural meaning.

Lawrence goes on to argue that, if the only reason for regulating conduct is its expressive dimension, then the expression itself can be directly regulated. This is a far more controversial step. For Lawrence's response to criticisms that this move fails to respect the basic First Amendment distinction between conduct and speech, see Lawrence, *supra,* at 440-44.

97. 113 S. Ct. 2194 (1993).

might argue that greater penalties are required to provide greater deterrence. Perhaps these crimes are more common, or perhaps they are more likely to incite retaliatory responses. But, on an expressivist logic, we might argue greater penalties are required because a different, and more threatening, social meaning attaches to the assault. From this perspective, beating up a black man because he is black is a different action, with a different social meaning, than an ordinary assault. The difference between these two forms of justification — consequential and expressive — reflects and shapes collective understandings of why we adopt such measures. In addition, some might believe the constitutionality of such measures, under the First Amendment, depends on whether they are justified on one or the other type of logic. The most important point, though, is that much conduct, like hate crimes, has both an expressive and a consequential dimension; action reveals certain attitudes as well as causing more tangible injuries.

This point can be generalized. Actions of all sorts — public and private, collective and individual — express certain values as well as bring about certain consequences.[98] Actions both "do" something and "mean" something; at the same time that they bring about certain consequences, they also express some set of values and normative attitudes. Although we do not ordinarily articulate legal harms in these ways, law and policy often, if implicitly, respond to this meaning-making or expressive dimension of actions.

In trying to find the right language to capture this legal concern for expressive harms, we might say that intentional and accidental batteries, or hate crimes and ordinary assaults, are two different actions. Or we might say they are the same action in their material dimension, but distinct in their expressive dimension. Nothing of substance, however, ought to turn on the formal way in which we classify the relationship between an action and its meaning. For action, meaning, and aim are mutually defining, both in social fact and, often, in law and policy.

b. Expressive harms in other areas of constitutional doctrine. Second, the Court has recognized constitutionally cognizable expressive harms in other doctrinal areas, though without using these specific terms. The most striking example is the emergence in recent years of

98. Of course, expressive and consequential effects are both effects or outcomes of policies. Part of what an action means is what it does. But it is helpful to observe the difference between these two dimensions of action. The labels are consistent with their usage in contemporary philosophy, but the semantic question of what labels are most helpful to capture the difference is not important. Whether we talk about the expressive dimensions of an action, its social meaning, or its symbolic significance, the crucial point is that actions both express values and attitudes as well as bring out more material consequences.

the "endorsement test" under the Establishment Clause.[99] The idea that the First Amendment bans state "endorsement" of religion rests, like *Shaw,* on a concern for social perceptions; on the perceived meaning of government policies; and on the view that the Constitution reaches not just material harms, but expressive ones. The explicit language with which courts have framed the "endorsement test" is grounded on the same concerns as those central to *Shaw.* Thus, Justice O'Connor has argued that the problem with a state endorsement of religion, for example, is that it "sends a *message* to nonadherents that they are outsiders, not full members of the political community, and an accompanying *message* to adherents that they are insiders . . . ."[100] In her analysis, the "endorsement test" invalidates government practices that create a *perception* that the government is endorsing or disapproving of religion.[101] These concerns for social perceptions, messages, and governmental endorsements of values are central whenever expressive harms are at issue.

That Justice O'Connor is both the author of *Shaw* and the originator of the "endorsement test" lends credence to the view that one cannot understand *Shaw* except in terms of concern for expressive values in the area of race and redistricting. To be sure, some commentators have embraced the Establishment Clause "endorsement test" with enthusiasm,[102] while others have found it vague, empty, or unadministrable.[103] Any effort to recognize expressive harms through constitutional doctrine must address these kinds of concerns. Despite

99. This test first emerged in Justice O'Connor's concurrence in Lynch v. Donnelly, 465 U.S. 668 (1984). Justice O'Connor developed it in subsequent separate opinions, and Supreme Court majority opinions have invoked the "no endorsement" idea with approval. *See, e.g.,* Edwards v. Aguillard, 482 U.S. 578, 585-86 (1987). For a history of the development of this test in an article otherwise critical of it, see Steven D. Smith, *Symbols, Perceptions, and Doctrinal Illusions: Establishment Neutrality and the "No Endorsement" Test,* 86 MICH. L. REV. 266, 268-76 (1987).

100. *Lynch,* 465 U.S. at 688 (O'Connor, J., concurring) (emphasis added).

101. 465 U.S. at 688-93 (O'Connor, J., concurring). In Wallace v. Jaffree, 472 U.S. 38 (1985), Justice O'Connor elaborated on two questions that are difficult for all constitutional doctrines focused on expressive harms: how courts might determine "the" social perception of a policy, and from what perspective courts ought to make this interpretive judgment when, as is often likely, no unitary perception exists. 472 U.S. at 73-76 (O'Connor, J., concurring). Thus, she argued that the relevant perceptions are those of an "objective observer" familiar with the text, legislative history, and implementation of the law in question, as well as the values recognized in the religion clauses of the Constitution. 472 U.S. at 76, 83 (O'Connor, J., concurring); *see also* Corporation of the Presiding Bishop of the Church of Jesus Christ of Latter-Day Saints v. Amos, 483 U.S. 327, 346-49 (1987) (O'Connor, J., concurring) (elaborating upon the "objective observer" perspective); Estate of Thorton v. Caldor, Inc., 472 U.S. 703, 711-12 (1985) (O'Connor, J., concurring) (same).

102. For an exhaustive summary of favorable commentary on the "endorsement test," see Smith, *supra* note 99, at 274 n.45.

103. *See, e.g.,* Michael W. McConnell, *Religious Freedom at a Crossroads,* 59 U. CHI. L. REV. 115, 147-57 (1992); Smith, *supra* note 99.

– Ex. 8844 –

these problems, however, judicial concern for expressive harms is demonstrably a pervasive and long-enduring feature of constitutional doctrine and disagreements.[104]

c. Standing and expressive harms. In much of constitutional law, both substantive and procedural doctrines require that harms be individuated before they become judicially actionable.[105] Indeed, the current Court has reinvigorated these requirements in recent years, requiring that plaintiffs distinguish their claims from "a generally available grievance about government — claiming only harm to [their] and every citizen's interest in proper application of the Constitution and laws, and seeking relief that no more directly and tangibly benefits [them] than it does the public at large."[106] As a result, the Court has rejected claims that "abstract stigmatic injuries" can be judicially cognizable.[107]

Yet, when courts recognize expressive harms, this traditional requirement of individualized harm comes under considerable pressure. Expressive harms focus on *social* perceptions, *public* understandings, and *messages;* they involve the government's symbolic endorsement of certain values in ways not obviously tied to any discrete, individualized harm. A significant tension, therefore, exists between recognition

104. For an effort to show that much constitutional doctrine and disagreement turns on whether one understands substantive constitutional provisions as recognizing expressive harms, in addition to more material ones, see Richard H. Pildes, Competing Conceptions of Value in Constitutional Law: Expressive and Consequential Harms (Dec. 1, 1992) (unpublished manuscript, on file with author).

105. The law of standing is a notable example of this type of procedural doctrine. The Court recently restated the "irreducible minimum" that is required for standing under Article III:

> [A] party seeking to invoke a federal court's jurisdiction must demonstrate three things: (1) "injury in fact," by which we mean an invasion of a legally protected interest that is "(a) concrete and particularized, and (b) actual or imminent, not conjectural or hypothetical," (2) a causal relationship between the injury and the challenged conduct, by which we mean that the injury "fairly can be traced to the challenged action of the defendant," and has not resulted "from the independent action of some third party not before the court," and (3) a likelihood that the injury will be redressed by a favorable decision, by which we mean that the "prospect of obtaining relief from the injury as a result of a favorable ruling" is not "too speculative."

Northeastern Fla. Chapter of the Associated Gen. Contractors v. City of Jacksonville, 113 S. Ct. 2297, 2301-02 (1993) (quoting Lujan v. Defenders of Wildlife, 112 S. Ct. 2130, 2136 (1992); Simon v. Eastern Ky. Welfare Rights Org., 426 U.S. 26, 41-42 (1976); Allen v. Wright, 468 U.S. 737, 752 (1984), respectively); *see* Cass R. Sunstein, *What's Standing After* Lujan? *Of Citizen Suits, "Injuries," and Article III,* 91 MICH. L. REV. 163 (1992) (discussing modern standing jurisprudence); *see also* Harold J. Krent & Ethan G. Shenkman, *Of Citizen Suits and Citizen Sunstein,* 91 MICH. L. REV. 1793 (1993) (responding to Sunstein's analysis of standing).

106. Lujan v. Defenders of Wildlife, 112 S. Ct. 2130, 2143 (1992).

107. *See, e.g.,* Allen v. Wright, 468 U.S. 737, 755 (1984) (rejecting the idea that stigmatic harm to a racially defined group gives an individual member of that group standing); *see also* Antonin Scalia, *The Doctrine of Standing as an Essential Element of the Separation of Powers,* 17 SUFFOLK U. L. REV. 881, 881-82 (1983) ("[C]ourts need to accord greater weight than they have in recent times to the traditional requirement that the plaintiff's alleged injury be a particularized one, which sets him apart from the citizenry at large.").

of expressive harms and traditional requirements of individualized wrongs.[108]

In *Shaw,* the Court avoided confronting the tension between these traditional requirements and its conception of expressive harm. Given the "special harms"[109] *Shaw* recognizes, perhaps any voter in North Carolina — not just those in District 12 and not just those who are white — can legitimately claim to suffer these harms and hence to have standing. In other contexts involving race-conscious policy, blacks do not have legal standing to challenge policies that purportedly benefit them as a group; the fact that some blacks might view an affirmative action policy, for example, as stigmatizing or as essentializing black identity is not the kind of harm that grounds legal standing. Only those disadvantaged in more material and particularized ways suffer the kind of injury necessary for judicial assessment of their claims. Hence, the plaintiffs in affirmative action cases are white individuals or white-owned businesses. Yet the very theory on which *Shaw* was litigated and decided appears to embrace a much broader conception of legal injury. The complaint, for example, refused to state the race of the plaintiffs and refused to allege the concrete and particularized injury of vote dilution. Instead, the plaintiffs pleaded a right to participate in a color-blind electoral process.[110] If this is the right at stake, all North Carolina voters might be thought to be injured in the same way and to the same extent.

To bring this claim closer to traditionally recognized ones of individualized harm, the district court rewrote the complaint by taking

---

108. For example, in the electoral context, the more traditional conception of standing recently led to dismissal of the constitutional challenge to the seating of Alcee Hastings as representative of Florida's 23d congressional district. Waggoner v. Hastings, 816 F. Supp. 716 (S.D. Fla. 1993). Hastings, a federal district judge who had been impeached, convicted, and removed from office, was subsequently elected to Congress. A plaintiff challenged his seating on the ground that the Constitution's impeachment provisions disqualified Hastings from holding any office under the United States. U.S. CONST. art. I, § 3, cl. 7 reads:

> Judgment in Cases of Impeachment shall not extend further than to removal from Office, and disqualification to hold and enjoy any Office of honor, Trust or Profit under the United States: but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment and Punishment, according to Law.

The plaintiff, however, was registered to vote not in the 23d district, but in an adjoining one. He nonetheless asserted a generalized interest in having only constitutionally qualified officials representing Florida. Although the court found "an appeal to the logic of the plaintiff's argument about an interest of a citizen in having lawfully qualified representatives," the court dismissed the complaint for lack of standing. 816 F. Supp. at 718. The standing holding appears to be an alternative holding because the court also went on to find the claim nonjusticiable on other grounds. 816 F. Supp. at 720. This result reflects not only the traditional requirement of concrete and particularized injury, but the narrowness with which courts have conceptualized legal injury in the electoral context.

109. Shaw v. Reno, 113 S. Ct. 2816, 2828 (1993).

110. 113 S. Ct. at 2824.

– Ex. 8846 –

judicial notice that the plaintiffs were white voters.[111] The Supreme Court then reinterpreted the plaintiffs' legal theory before endorsing it: the claim became a challenge to "legislation so extremely irregular on its face that it can rationally only be viewed as an effort to segregate the races for purposes of voting, without regard for traditional districting principles and without sufficiently compelling justification."[112] Even so, if the way the legislation is "viewed" *is* the harm, any North Carolina voter might be similarly positioned and hence equally entitled to standing.

Justice Souter indirectly pressed this issue by arguing that, absent vote dilution, race-conscious districting involves no constitutional harm.[113] The Court's response revealed just how nonindividualized is the expressive harm central to *Shaw:*

> As we have explained, however, reapportionment legislation that cannot be understood as anything other than an effort to classify and separate voters by race injures voters in other ways. It reinforces racial stereotypes and threatens to undermine our system of representative democracy by signaling to elected officials that they represent a particular racial group rather than their constituency as a whole. Justice Souter does not adequately explain why these harms are not cognizable under the Fourteenth Amendment.[114]

The Court, however, does not adequately explain why *these* harms are not generalized ones, the kinds of harms for which generalized standing to sue would be appropriate. Indeed, although the conceptions of cognizable harm and standing are directly linked — and standing is both a jurisdictional question and, in part, a constitutional one — the Court leaves issues of standing unaddressed.[115] The point

111. 113 S. Ct. at 2822.

112. 113 S. Ct. at 2824.

113. 113 S. Ct. at 2847 (Souter, J., dissenting).

114. 113 S. Ct. at 2828 (citations omitted).

115. The closest the Court comes to resolving the tension between traditional standing principles and the expressive harms *Shaw* recognizes is when the Court intimates that the voters in a particular "bizarre" district experience these harms distinctly: "When a district obviously is created solely to effectuate the perceived common interests of one racial group, elected officials are more likely to believe that their primary obligation is to represent only the members of that group, rather than their constituency as a whole." 113 S. Ct. at 2827. The notion here appears to be that seemingly single-valued redistricting runs the danger of constructing an inappropriate, or antiliberal, conception of the relationship between representation and community in a particular district. In many other passages, however, the Court describes the harms in ways that are not district specific. *See, e.g.,* 113 S. Ct. at 2830 ("Nothing in the [Court's precedents] precludes white voters *(or voters of any other race)* from bringing the analytically distinct claim that a reapportionment plan rationally cannot be understood as anything other than an effort to *segregate citizens* into separate voting districts on the basis of race without sufficient justification.") (emphasis added). Even on the narrowest reading, passages like these seem to imply a standing principle broad enough at least to permit any voter in a "bizarre" district to sue. Nevertheless, the question remains whether this kind of geographic standing limitation is consistent with the logic of the expressive harms the Court recognizes.

here is that tension exists between the underlying but implicit theory of *Shaw* and established legal principles, such as those reflected in standing doctrine. There may be principled ways of resolving this tension, but the Court does not confront the conflict or acknowledge it.

4. *Social Perceptions Versus the "Actual Facts"*

Thus far, we have assumed that the North Carolina General Assembly's purpose in designing District 12 was to create a second majority-black district in the state. On this view, the aim of creating a minority district was "the" cause of the "bizarre" district shape.[116] The social perception of this "fact" seems, at bottom, to be the foundation on which the decision rests.[117]

The central concern of *Shaw* is this social perception. Seen in this way, *Shaw* offers a story about the corruption of politics by race consciousness, at least when the latter is carried to extremes. On this view, politicians use civil rights policy, through the pressure the VRA puts on the redistricting process, to manipulate and distort political institutions — or, more precisely, the VRA is being used in ways that create the social perception that this manipulation is taking place.

When the facts are examined from another vantage point, however, *Shaw* might expose a quite different story. As in many redistricting battles, with their boiling cauldrons of partisan, personal, interest-group, fair representation, and other motivations, reconstructing the reasons behind North Carolina's actions at each stage is no easy task. The record suggests both a "stronger" and a "weaker" view of the actual facts, and, on either account, *Shaw* is yet more complex.

a. The strong view of the facts. Recall that the Attorney General objected to North Carolina's initial redistricting plan on the ground that the VRA required creation of a second minority district, which he suggested could be in the southeastern part of the state. The "strong" interpretation of the facts takes this assessment as correct and assumes that such a district, reasonably compact, could indeed have been created. The Court appeared to assume this view, although it did not address the question directly, and the lower court made no formal finding to this effect.[118] Yet, if this is the assumption on which *Shaw* is

116. We do not explore in detail more subtle causation questions, such as whether the impermissible cause with which *Shaw* is concerned must be merely a contributing cause, the dominant cause, or the exclusive cause for a particular district's design. For further discussion, see *infra* text accompanying notes 251-52.

117. Citizens exposed to the plan will find it "so irrational on its face that it immediately offends principles of racial equality." 113 S. Ct. at 2829.

118. There is no way to prove that this assumption underlies the Court's approach to the case, for the Court made no formal finding or statement to this effect, but the atmosphere of the

decided, what *Shaw* would reveal is not the manipulation of *politics by race,* but the manipulation of *race by politics.*

On this strong reading of the facts, North Carolina could have complied by drawing a reasonably compact minority-dominated district, but it made a deliberate choice not to do so. Yet, on this view, the reasons behind the design of District 12 would have nothing to do with race — and everything to do with protecting incumbent congressmen and seeking partisan political advantage. Faced with a range of choices for creating a second minority district, including a reasonably compact one, the General Assembly made the choice it did for its own reasons. As several Justices appear to have assumed, those reasons were incumbent protection and partisan advantage.[119] On this assumption, however, political reasons, not concerns involving race, would be the cause or purpose behind the design of District 12.

At this point, notice that the case would then actually present a *conflict* between social perceptions and political realities. To restate, the actual reason District 12 appears "bizarre" is that it was designed to protect incumbents and enhance Democratic control of the state's congressional delegation.[120] Once the Justice Department's objection was lodged, North Carolina was obliged to create a second majority-minority district; but the final shape and location of that district traces to political, not racial, factors. Analytically, we might say two governmental decisions are involved. The first, from the Justice Department, was that North Carolina had to create a second majority-minority district (Decision *A*); the second, from the North Carolina General Assembly, was where to locate this district (Decision *B*). Race was a motivating or dominant factor for Decision *A*, but not Decision *B*.

---

opinion strongly suggests that the Court believed North Carolina had defiantly rejected the Justice Department's suggestion in order to pursue state political agendas. For example, the Court referred twice to the fact that "the Attorney General suggested that North Carolina could have created a reasonably compact second majority-minority district in the south-central to southeastern part of the State," 113 S. Ct. at 2832, including in the very last paragraph of the opinion, when the Court is recapping the most important elements of the case to define the decision's basic principles. 113 S. Ct. at 2820, 2832. In addition, one of the dissenting opinions explicitly rests on the assumption that the state could have drawn a reasonably compact minority-dominated district, most likely in the southeastern part of the state, as the Attorney General had suggested. *See* 113 S. Ct. at 2841 n.10 (White, J., dissenting). Thus, the "strong" version of the facts most likely informed the Court's internal discussions and the Justices' individual deliberations.

119. *See supra* note 118.

120. *See supra* note 118. In other litigation, plaintiffs did allege that North Carolina's rejection of a majority-black district in the southern region of the state in favor of District 12 was the result of political gerrymandering motivated by the desire to protect Democratic incumbents. A three-judge court dismissed that suit, Pope v. Blue, 809 F. Supp. 392 (W.D.N.C. 1992), and the Supreme Court summarily affirmed. Pope v. Blue, 113 S. Ct. 30 (1992).

From the set of possible majority-minority districts, North Carolina selected District 12 on political, not racial, grounds.

If this "strong" version of the facts is true, two important points follow. First, the North Carolina districting story would reveal the way in which politicians have come to use civil rights and the VRA as a screen; while going to Machiavellian lengths to protect their seats and pursue their partisan agendas, politicians claim "the Voting Rights Act made me do it." This is self-interest masquerading as race consciousness. Political actors thus encourage social perceptions that government has been captured by extremism in the name of race. The backlash, which should be directed at self-interested politicians, instead focuses on the Voting Rights Act, the Justice Department, and race-conscious policymaking. Whether intended this way or not, *Shaw* might thus be seen as a blow against the cynical manipulation of the VRA.

The second point is related. If the design of District 12 reflects political purposes, any potential equal protection violation would therefore have to reside in the earlier decision — that of the Justice Department to require a second majority-minority district. In legal terms, however, finding such a violation at the first stage of this process would be difficult, at least if the routine application of the VRA remains constitutional, as the opinion suggests it does. For the use of race in Decision *A* is routine, rather than extreme. Indeed, the decision appears to be a typical application of the VRA; the Attorney General found a violation in the failure to create a second majority-minority district where — applying the Justice Department's traditional criteria, which take geographic compactness into account — such a district could be created. Yet nothing in *that* decision violates the Fourteenth Amendment under the reasoning of *Shaw;* it is not a decision to ignore all traditionally relevant districting criteria in the name of race.

To see this more clearly, suppose North Carolina had created a relatively compact second district. By definition, this would not trigger the special "district appearance" claim recognized in *Shaw.* This means that, on *Shaw*'s own reasoning, Decision *A*, which does employ race, does not violate the Constitution. But if Decision *B* reflects partisan and incumbency purposes, it too does not involve the use of race at all. Thus, Decision *B* cannot violate the Constitution either.

What does all this establish? That if constitutional principles must assess state action on the basis of "the actual facts," and if we accept the "strong" version of those facts — as the Court appears to do — *Shaw* is difficult to explain or rationalize coherently. From that, we

might conclude that *Shaw* is simply wrong. Alternatively, we might conclude that the seemingly noncontroversial first premise is wrong: perhaps the mistake is in assuming that constitutional principles must be applied to "the actual facts." Yet what could the alternative possibly be? The best answer would have to be that constitutional principles can properly apply to the social perceptions the facts generate, rather than be confined to the actual facts themselves.

This extraordinary conception of constitutional adjudication would have to underlie *Shaw* if the Court is assuming the "strong" version of the facts. *Shaw* would then rest on social perceptions in a much deeper way than our initial description suggests. That is, when the Court says, "we believe that reapportionment is one area in which appearances do matter,"[121] that belief would have to be operating at two levels. For it is the appearance — not the fact — that a district's appearance reflects value reductionism in the name of race that lies behind *Shaw*.

If District 12 were indeed drawn for incumbency and partisan reasons, *Shaw* would ultimately involve a conflict between social perceptions and the actual facts of politically self-interested districting. Once the Court assumed this kind of conflict, which it appears to have done, the Court had three options. First, it might have rejected the equal protection claim in an opinion that exposed the politically self-interested manipulation of race. For those who believe the Court can play a significant educative role, this might have been the preferred course: let the citizens of North Carolina know that their politicians, not the VRA, are to blame.

Second, the Court might have focused only on the actual facts, rather than attempt to assess the social perceptions they created. If no constitutional principle prohibits bizarrely shaped districts when designed for the purpose of protecting incumbents, then no constitutional violation would exist.[122] Many will believe this to have been the better course. After all, legal principles that turn on social perceptions, rather than "the actual facts," will not make judicial decisionmaking any more consistent or predictable.

The third option would be to apply constitutional principles in a way that gives social perceptions priority over the actual facts. To the extent the Court's opinion assumes the "strong" version of the facts,

121. *Shaw*, 113 S. Ct. at 2827.

122. On remand or in future applications of *Shaw*, a crucial question is likely to be whether governments can legitimately assert that partisan advantage or protection of incumbents provides a compelling end under strict scrutiny to justify extremely contorted election districts. For discussion, see *infra* text accompany notes 254-69.

this rather remarkable option is the one the Court chose in remanding the case for strict scrutiny assessment. Before dismissing this choice as confused or unworkable, we ought to consider whether social perceptions should be excluded from the proper concerns of constitutional law. For many purposes social perceptions are no less "real" than actual facts; these perceptions play a critical role in defining and shaping the prevailing political culture. Perhaps constitutional law is properly concerned with the character of this public culture. Indeed a surprising number of constitutional doctrines or Supreme Court decisions are difficult to rationalize in functional terms; for example, some decisions preclude legislatures from using certain means to achieve a particular end but permit other means to achieve exactly the same end.[123] The best justification for these doctrines and decisions is that they are geared toward cultivating certain collective understandings in the political culture, rather than toward prohibiting certain end states from being achieved. That is, these doctrines require public officials to understand the relationship between certain values in a particular way. *Shaw* rests precisely on this kind of concern for appropriate public understandings regarding the relationship of race to redistricting. Thus, on the strong view of the facts, *Shaw* must stand for the view that extremely contorted minority districts convey the social impression that race has dominated public decisionmaking — that the appearance that race has played such a role violates the Fourteenth Amendment. More concisely, appearance is part of the reality the Constitution addresses.

b. The weak view of the facts. If this interpretation of *Shaw* is incorrect, it must be because a different set of facts lies behind the North Carolina districting scheme. The alternative, "weaker" view of the facts would be that North Carolina could not have created a signif-

123. This article is not the place to provide a lengthy catalogue of such doctrines or decisions, but, as one example, consider the recent decision in New York v. United States, 112 S. Ct. 2408 (1992). There Congress had ratified a state-led effort to develop a comprehensive mechanism for fairly distributing the burdens of low-level nuclear waste disposal. The Court held that Congress could enforce this scheme constitutionally through monetary and other incentives, but it could not do so by requiring states to assume ownership of nuclear waste if they failed in their other obligations. 112 S. Ct. at 2412. In functional terms, the decision is easy to criticize, for Congress can enforce the statute through other, perhaps equally effective means — means just as "coercive" in effect as mandatory ownership. Yet the Court might be understood as concluding that Congress expresses a distinct — and constitutionally impermissible — attitude toward the states when it directly mandates their action. Even if vulnerable on functional or doctrinal grounds, the decision might be thought to assert the principle that Congress cannot understand its relationship to states in this way. Interestingly, Justice O'Connor is the author of *New York*. Thus, we might see a general theme emerging in Justice O'Connor's conception of constitutional law and the Court's role: a general attentiveness to the expressive dimensions of public action. For further examples of decisions that might be difficult to rationalize on functional grounds, but are best understood in more expressive terms, see the provocative account in PHILIP BOBBITT, CONSTITUTIONAL FATE 196-223 (1982).

icantly more compact second minority district than CD12. On this view, the Justice Department erred in concluding that the state could have created such a district. In light of the difficulty of reaching firm conclusions from the record,[124] this possibility cannot be dismissed. If the Justice Department were mistaken, then the "bizarre" shape of CD12 would reflect good-faith efforts of the North Carolina General Assembly to comply, not self-serving political ends. Perhaps when the General Assembly attempted to design a second minority-controlled district, the only possibilities turned out to be districts as odd in shape as the one the Assembly eventually chose.[125]

If this account is accurate, the reasons behind the design of CD12 would be more purely race-conscious ones. No manipulation of the VRA or racial symbolism for narrow partisan advantage or protection of incumbents would have been involved. Instead, the state was primarily motivated by the goal of creating a second minority-controlled district; this motivation, not others, would account for the peculiar shape of CD12. To some, this version of the facts might make the design of the district less troubling. On this view, it is far worse for politicians to manipulate social perceptions and pursue political agendas under the guise of complying with federal law and ensuring fair minority representation. When the only means of ensuring fair and effective minority representation is through oddly shaped districts, the direct and exclusive pursuit of this goal should, on this view, be accepted. To others, the weaker interpretation of the facts would make the case even more troubling, for race *would* then be the dominant purpose behind CD12. Now the actual facts (not the social perceptions) would be that concerns for race had dominated all other redistricting values.

The judicial opinions in *Shaw* and the record evidence we have reviewed do not permit us to make a convincing choice between the "strong" and "weak" views of the facts.[126] Certainly the Court comes

124. *See infra* note 126.

125. If this were so, the state perhaps could have submitted its second districting plan for preclearance and tried to demonstrate to the Justice Department that a reasonably compact second minority district could not have been created. Of course, the state might have faced considerable costs, financial and political, from further delaying implementation of the post-1990 congressional redistricting.

126. Trying to resolve which version of the facts — the "strong" or the "weak" version — is more accurate brings to the surface the complexities of current VRA theory and practice. First, when the North Carolina General Assembly came up with its first redistricting plan, which included only one black-dominated district, the General Assembly expressly concluded that "[i]t is apparent that it is only possible to create one majority black district that is reasonably compact, and that is what Chapter 601 does." Lacy Thornburg, Attorney General of North Carolina, Other Material Concerning the Purpose of the Plan, *in* Section 5 Submission for North Carolina Congressional Redistricting, Chapter 601 (Aug. 28, 1991) (unpublished document submitted to

closest to having assumed the strong version.[127] Moreover, the very terms in which the Court chose to confront the formal legal question to be decided assumes this strong version of the facts. Thus, the appellants initially filed a broad jurisdictional statement that directly challenged the state's power to draw majority-black districts.[128] But in noting probable jurisdiction of the case, the Court directed the parties to brief a different and narrower question:

> Whether a state legislature's intent to comply with the Voting Rights Act and the Attorney General's interpretation thereof precludes a finding that the legislature's congressional redistricting plan was adopted with invidious discriminatory intent where the legislature did not accede to the plan suggested by the Attorney General but instead developed its

---

the Civil Rights Division, U.S. Department of Justice, copy on file with authors). In reaching this conclusion, the General Assembly, which Democrats controlled, rejected at least two Republican-sponsored alternatives that would have arguably created two minority-dominated districts (as well as, presumably, having Republican-favored partisan effects). The stated reasons for these rejections were that, in one plan, the second district was "so sprawling that it was most often described as 'ludicrous' or 'absurd,' " *id.* at 1, and that, in the other alternative, the second district

> sprawled all over eastern North Carolina and looked like a river with many tributaries running from Virginia in the north to Wilmington in the south. It would be exceedingly hard to campaign effectively in this area, or to represent it well, since in many areas it is only one precinct wide.

Id. at 2. Thus, Republicans in North Carolina were no less willing to design highly contorted districts than the General Assembly was when the Assembly created District 12. Moreover, if these reasons are taken at face value, they suggest that the General Assembly sought to avoid extremely distorted districts and ended up with one only after the Department of Justice's denial of preclearance; these comments also suggest that designing a reasonably compact second minority district was considerably more difficult than the "strong" version of the facts assumes. Of course, whether the reasons the General Assembly offered should be taken at face value is a question that would require more detailed factual inquiry.

Second, it is difficult to judge (from the record material we have seen) the basis on which the Justice Department concluded that a second, reasonably compact minority district could have been created in southeastern North Carolina. The only map proposing such a district we have been able to discover in the record is that which the NAACP submitted to the Justice Department with a memorandum dated Oct. 29, 1991. This memorandum stated "[t]here are many ways that the population in the Southeast area of North Carolina can be configured to create another minority district. Our proposal is created to show that there is the possibility of the district." Memorandum from Samuel L. Walters, Assistant General Counsel, NAACP to George Harrison, Voting Rights Division, U.S. Department of Justice 1 (Oct. 29, 1991) (on file with authors). Yet this memorandum itself acknowledged that "[t]he map shows the district is not the most compact one ever created," *id.*, and the proposed district would have had a population (not voting-age population, as far as we can tell) that would have been 51.2% Black and 8.4% American Indian. *Id.* at 2. Thus, even the district the NAACP proposed apparently depended on aggregating minority populations to create a second minority-controlled district. Whether the VRA permits or requires such aggregation of minority groups, and under what circumstances, remains a major unresolved question. The Justice Department did not specify the particular location of the second district it had in mind and generally refrains from proposing detailed district designs that local governments must follow. While the Court understandably seems to have accepted the Justice Department's assertion that a reasonably compact second district could have been created — the "strong" version of the facts — the record material we have been able to review does not convincingly establish this conclusion.

127. *See supra* text accompanying note 118.

128. Shaw v. Barr, 808 F. Supp. 461 (E.D.N.C. 1992), *appeal docketed,* No. 92-357 (U.S. Aug. 25, 1992).

own.[129]

This way of framing the issue assumes the state could have complied, but deliberately chose its own alternative.

The factual ambiguity behind *Shaw v. Reno* suggests two quite different interpretations of the decision's reach. Because the Court seemingly decided the case after assuming the strong version of the facts, *Shaw* might be read as addressing only similar factual contexts. That is, *Shaw* might stand for the more narrow proposition that a state must justify "highly irregular" minority districts under strict scrutiny when — and only when — the state could have created a reasonably compact minority district instead. If this reading is right, *Shaw* would turn out to be a case of minimal significance addressing only exceptional circumstances; it would have no impact on actual minority representation. States would have to choose more compact districts over extreme ones, but the number of minority districts in a state or nationwide would not be affected. This interpretation of the decision is consistent with the actual question the Court purported to decide and assumes, as the Court seemingly did, the strong view of the facts.

Alternatively, *Shaw* might stand for the broader proposition that, even when a state has no other way of creating a minority district, it cannot resort to "highly irregular" shapes to do so without other compelling justifications. This reading, of course, would have far greater effect on minority districts throughout the country; precisely how great depends on the meaning courts give to "highly irregular," a question on which we offer guidance in Parts III and IV. Conceivably this question might be addressed on remand, for the state might seek to defend its district on the ground, in part, that no more significantly compact minority district could have been created.

The facts the Court apparently assumed and the precise legal question presented provide support for reading *Shaw* narrowly. But, as a predictive matter, we think it more likely the broader reading will prevail. Particular factual contexts often influence the atmosphere in which the Court approaches major legal issues, but those precise facts are sometimes left behind as courts seize upon the broad legal principles the Court has seemingly laid down. In *City of Richmond v. J.A. Croson Co.*,[130] for example, the atmosphere surrounding the Court's review of state affirmative action set-aside programs was certainly influenced by the fact, which the Court stressed,[131] that black officials controlled Richmond's city council. Yet the racial composition of the

– Ex. 8855 –

enacting body has become irrelevant as lower courts have taken *Croson* to establish broad constitutional principles for local set-aside programs.[132]

In the redistricting context, it seems unlikely that courts will read *Shaw* to distinguish between "bizarre" minority districts that are the only way to enhance minority representation and "bizarre" districts created where reapportionment bodies could have designed more compact ones. *Shaw* emphasizes its own specific facts, but the decision is simultaneously written in broad rhetorical and legal terms. To the extent the decision is primarily focused on the social perceptions about politics and race that the Court views irregular race-conscious districts as generating, it seems yet more implausible that courts will distinguish necessarily irregular districts from more superfluous ones. Thus, we think it most likely courts will emphasize the broad themes of *Shaw* and apply it as a general constraint on "highly irregular" race-conscious districts.

5. *Does Shaw Apply to White Districts?*

In order to test this analysis, consider whether *Shaw* applies to districts whose general or voting-age population is overwhelmingly white. Formalistically, and doctrinally, this might be viewed as an easy question: equal protection cannot apply differently to white-dominated and black-dominated districts. Indeed, a defining trait of the current Court is its emerging commitment to the principle that the Equal Protection Clause cannot apply differently depending on the specific racial group that legislation benefits, burdens, or singles out. This vision informs the strict scrutiny standard adopted in *City of Richmond v. J.A. Croson Co.*[133]

Yet, in the redistricting context, this kind of formal equality seems particularly odd as well as inconsistent with any purposive, rather than formal, interpretation of *Shaw*. To begin with, *Shaw* does not recognize a general constitutional barrier to "highly irregular" districts.[134] Strict scrutiny is not required for districting that is "bizarre on its face," but only for districting that is "so bizarre on its face that it is 'unexplainable on grounds other than race.' "[135]

If we ask how best to give meaning to these principles when ap-

132. *See., e.g.*, Contractors Assn. v. City of Philadelphia, Nos. 92-1880, 92-1887, 1993 U.S. App. LEXIS 25908, at *26-28 (3d Cir. Oct. 7, 1993).

135. Shaw v. Reno, 113 S. Ct. 2816, 2825 (1993) (quoting Village of Arlington Heights v. Metropolitan Hous. Dev. Corp., 429 U.S. 252, 266 (1977)).

– Ex. 8856 –

plied to white-controlled districts, the social and political contexts in which such districts are likely to arise suggest that *Shaw* might rarely, if at all, apply. Highly irregular, white-controlled districts might be created in three general contexts. First, they might be located in a state, like Iowa, that is overwhelmingly white. Conceivably, such a district might involve contorted boundaries for a number of reasons, including partisan advantage, incumbency protection, or enhancement of one local economic interest at the expense of others. Yet, by definition, the strange appearance of such a district could not be understood in racial terms, let alone *only* in racial terms. Thus, on its own terms, *Shaw* would not apply.

Next, consider a similar district in a state with a significant black population, but where the oddly shaped white district is located in a region of the state far removed from where most black residents live. Congressional District 4, in Tennessee, appears to be such a district; it cuts a swath through the middle of the state and, as our quantitative analysis will show later, it is one of the most diffused districts in the country.[136] Tennessee's voting-age population is 14.6% black, but largely concentrated in the southwestern part of the state, around Memphis. Thus, no plausible basis appears to exist for concluding that race explains this "highly irregular" district. Any district that might reasonably take its place, no matter how compact, would likely include a similar percentage of white voters. Under this scenario, the district might be odd, but not because it is "segregating" races. Again, on its own terms *Shaw* presumably would not apply; Tennessee would not have to defend this district under strict scrutiny.

The third, more complicated, scenario would involve a highly irregular district in a state with a significant black population or in a region in which such a population lives. If the state designs the district with a racially discriminatory intent or if the district results in minority-vote dilution, it would be unlawful without regard to *Shaw*. But, if it is not unlawful on those grounds, could such a district plausibly generate the perception that it has been designed for racial reasons? In the absence of illegal minority-vote dilution, this scenario is factually unlikely because numerous nonracial reasons might account for the district's irregular shape. However base or noble the motivations of partisan manipulation, incumbency protection, and the like might be, they are not racial motivations. Nor are whites likely to benefit, as whites, from contorted district shapes that do not have the effect of diluting minority votes. In other words, when people see "bi-

136. *See infra* Table 3.

– Ex. 8857 –

zarrely shaped," white-dominated districts — and no illegal vote dilution is taking place — are they likely to perceive those districts as extremist creations in the name of race, at least as *Shaw* understands that concept?[137]

The important general point here is that *many* reasons might explain oddly shaped white-dominated districts. Yet similar black-dominated districts are more likely to reflect a single, recurring aim: to enhance effective minority representation. This asymmetry is a function of the social realities of race in this country and of the existence of the VRA. Whites do not need to be concentrated into districts to assure their effective political participation; in contrast, as the VRA recognizes, minorities might need effective control over some "safe" districts to avoid their submergence in a hostile majority.

In terms of applying *Shaw,* this means that, in principle or in actual fact, *Shaw* is unlikely to affect white districts. Only in the third scenario is *Shaw* potentially relevant, and, even there, it seems unlikely that courts will find race to be the basis for contorted majority-dominated districts (in the absence of actual vote dilution). This result might seem an obvious corollary of the "similarly situated" requirement of equal protection: given social realities, black and white districts rarely, if ever, arise in similar circumstances. But courts, including the Supreme Court, might find it difficult to embrace this conclusion directly. To announce that *Shaw* constrains only the choices of policymakers designing minority-controlled districts is, at the least, awkward, particularly for a Court committed to formal equality. Yet the logic of *Shaw* itself would seem to dictate such a conclusion.

* * *

We are now in a position to summarize the purposes and principles that underlie *Shaw.* Government cannot redistrict in a way that conveys the social impression that race consciousness has overridden all other, traditionally relevant redistricting values. In the Court's view, certain districts whose appearance is exceptionally "bizarre" and "irregular" suggest that impression. Plaintiffs need not establish that they suffer material harm, in the sense of vote dilution, from such a district. *Shaw* is fundamentally concerned with expressive harms: the

137. Conceivably, there might be situations in which boundaries were intentionally manipulated to deny blacks potential influence that would still not amount to illegal vote dilution. If there are ever such circumstances that do not violate the VRA itself, *Shaw*'s logic would sensibly extend to these contexts.

– Ex. 8858 –

social messages government conveys when race concerns appear to submerge all other legitimate redistricting values.

Identifying these principles is one task; giving meaningful content to them is another. The "special harms" which concern the *Shaw* Court arise only when some threshold of distorted district "appearance" has been crossed. But how is that threshold to be recognized? If *Shaw* is fundamentally concerned with social perceptions, can legal criteria be developed to discipline the inquiry — of courts and reapportionment bodies — into these perceptions? Alternatively, are these expressive harms so inarticulable and unquantifiable that courts must be left to apply their intuitive judgments in an ad hoc, case-by-case fashion?

In Part II, we describe previous efforts of courts to give content to similar requirements governing election-district shape. The unpromising history of these efforts suggests the need for an alternative approach. In Part III, we develop quantitative standards for judging district appearance and thereby giving content to *Shaw*'s principles.

II. COMPACTNESS UNDER STATE LAW AND THE VOTING RIGHTS ACT

Shaw raises the issue of district compactness in an unusual — indeed, singular — legal context: the constraints the U.S. Constitution imposes on the appearance of legislative districts. As noted earlier, *Shaw* is the first case to suggest such a constraint as a matter of federal constitutional law.[138] Issues of district compactness[139] have arisen in

138. *See supra* text accompanying note 6.

139. Nothing in the Constitution itself requires the states to create congressional districts. *See* U.S. CONST. art. I, § 2. Indeed, in the first elections after ratification, the majority of new states held at-large congressional elections. Only Massachusetts, New York, Maryland, Virginia, and South Carolina were organized into representative districts. There is evidence that at least some of the Framers expected the states to create districts and intended the Time, Place, and Manner Clause of Article I, Section 4 to act as a brake against factional districting by state legislatures. ANDREW HACKER, CONGRESSIONAL DISTRICTING: THE ISSUE OF EQUAL REPRESENTATION 8-10 (1963). For example, James Madison approvingly asserted in THE FEDERALIST NO. 56, at 379-80 (James Madison) (Jacob E. Cooke ed., 1961): "Divide the largest state into ten or twelve districts, and it will be found that there will be no peculiar local interest . . . which will not be within the knowledge of the representative of the district." Similarly, Alexander Hamilton stated at the New York ratifying convention: "The natural and proper mode of holding elections will be to divide the state into districts in proportion to the number to be elected." ALEXANDER HAMILTON, First Speech of June 21 in the New York Ratifying Convention, *in* SELECTED WRITINGS AND SPEECHES OF ALEXANDER HAMILTON (Morton J. Frisch ed., 1985), *quoted in* CONGRESSIONAL QUARTERLY INC., JIGSAW POLITICS: SHAPING THE HOUSE AFTER THE 1990 CENSUS 6 (1990) (alteration in original).

As of 1840, nine of the 31 states continued to elect representatives at large. In response to the frequent occurrence of a majority party's sweeping an entire state delegation in at-large states, Congress invoked the Time, Place, and Manner Clause to pass the Reapportionment Act of 1842, ch. 47, 5 Stat. 491. That Act required, for the first time, that representatives "shall be elected by districts composed of contiguous territory equal in number to the number of Representatives" for

– Ex. 8859 –

two other legal contexts, however, and judicial experience from these other settings provides a starting point for considering the ways courts might implement *Shaw.*

First, twenty-five states, through state constitutions or statutes, require compact legislative districts.[140] In practice, these requirements have been largely ineffective.[141] Second, the VRA itself, as interpreted in *Thornburg v. Gingles,*[142] requires proof that a reasonably compact minority district could be created in order to establish substantive liability.[143] Although only a few decisions have addressed this aspect of *Gingles,* the VRA cases provide useful additional information concerning judicial implementation of compactness standards. This experience also suggests that, absent quantitative guidelines, judicial efforts to give content to compactness requirements are likely to be inconsistent, ad hoc, and unpredictable.

Neither of these experiences suggests that easy solutions will be forthcoming to Justice White's concern that *Shaw* is unworkable.[144] Recent developments in both technology and the social sciences, however, offer a principled and judicially administrable way out of this new redistricting "thicket."[145] That path involves embracing quanti-

---

each state. Reapportionment Act of 1842, ch. 47, 5 Stat. 491. Despite the Act, New Hampshire, Georgia, Mississippi, and Missouri conducted their 1842 elections under at-large systems; over protests, Congress seated all the members of these states. CONGRESSIONAL QUARTERLY INC., *supra,* at 18.

In 1901, Congress added a compactness requirement to the Act, Reapportionment Act of 1911, ch. 5, § 3, 37 Stat. 13, 14; Reapportionment Act of 1901, ch. 93, § 3, 31 Stat. 733, 734, but this requirement was soon dropped. Reapportionment Act of 1929, ch. 28, § 2a, 46 Stat. 21, 26. *See generally* Steve Bickerstaff, *Reapportionment by State Legislatures: A Guide for the 1980s,* 34 SW. L.J. 607, 610-11 (1980) (describing Congress's failure to pass a reapportionment act after the 1920 Census, thus delaying reapportionment until passage of the federal Reapportionment Act of 1929). The compactness requirement has never been revived. *See* Wood v. Broom, 287 U.S. 1 (1932) (interpreting the federal Reapportionment Act of 1929 to repeal compactness requirement); *cf.* Franklin v. Massachusetts, 112 S. Ct. 2767, 2771 (1992) (discussing the passage of the Reapportionment Act of 1929). Today, only the seven states that are entitled to a single representative — Alaska, Delaware, Montana, North Dakota, South Dakota, Vermont, and Wyoming — hold at-large congressional elections. For a good overview of congressional reapportionment acts, see Emanuel Celler, *Congressional Apportionment — Past, Present, and Future,* 17 LAW & CONTEMP. PROBS. 268 (1952).

140. Grofman, *Criteria for Districting, supra* note 7, at 85. In Hawaii, Iowa, Missouri, Montana, Virginia, West Virginia, and Wyoming, state compactness requirements apply to congressional redistricting. *See* LARRY M. EIG & MICHAEL V. SEITZINGER, CONGRESSIONAL RESEARCH SERVICE, STATE CONSTITUTIONAL AND STATUTORY PROVISIONS CONCERNING CONGRESSIONAL AND STATE LEGISLATIVE REDISTRICTING, CRS Rep. No. 81-143A (June 7, 1981) (citing statutes and constitutions from Hawaii, Iowa, Missouri, Montana, Virginia, West Virginia, and Wyoming); *see, e.g.,* Shayer v. Kirkpatrick, 541 F. – Ex. 8860 –

tative measures of "district appearance" that social scientists and statisticians have developed in recent years.

A. *State Compactness Requirements*

Nearly all of the twenty-five states that require compact districts express this requirement in qualitative terms. Many provisions simply require that districts be "compact," often in a ritualistic trilogy like the following from the Illinois Constitution: districts must be "compact, contiguous and substantially equal in population."[146] In other states, this language is modified by provisions requiring that districts be as "compact as possible," as "compact as practicable," or "reasonably compact."[147] Just two states, Iowa and Colorado, express compactness requirements in specific quantitative formulas.[148]

With respect to both reapportionment practice and judicial decisionmaking, these requirements have been ineffective. The requirements seem to be infrequently litigated; when they are, state courts have been reluctant to enforce them, expressing extreme deference to political bodies. To be sure, a few courts have overturned redistricting plans on state law compactness grounds.[149] Not surprisingly, perhaps,

---

U.S. 549, 556 (1946), and it has continued to accompany virtually all judicial entries into new issues surrounding redistricting. *See generally* Peter H. Schuck, *The Thickest Thicket: Partisan Gerrymandering and Judicial Regulation of Politics,* 87 COLUM. L. REV. 1325 (1987).

146. ILL. CONST. art. IV, § 3(a).

147. *See, e.g.,* MICH. CONST. art. IV, § 2 (requiring state senatorial districts to be drawn "as rectangular in shape as possible"); MO. CONST. art. III, § 5 (mandating that state senate districts be "of contiguous territory, as compact and nearly equal in population as may be"); N.Y. CONST. art. III, § 5 (requiring assembly districts to be drawn "in as compact form as practicable"). For a full survey of state compactness requirements, see Grofman, *Criteria for Districting, supra* note 7, at 177 tbl. 3.

148. One of the two compactness standards that the Iowa legislature adopted in 1980 is expressed as "the ratio of the dispersion of population about the population center of the district to the dispersion of population about the geographic center of the district." IOWA CODE ANN. § 42.4(1)(c) (West 1991). Colorado's Constitution provides a compactness measure based on the sum of the perimeters of district boundaries. COLO. CONST. art. V, § 47.

149. The leading recent state case is probably Schrage v. State Bd. of Elections, 430 N.E.2d 483 (Ill. 1981). The case is particularly significant because the court found a compactness violation with respect to the design of a single state district. More commonly, state courts that strike down redistricting plans do so on the ground that the plan as a whole, rather than an isolated district, violates state law requirements. *Schrage* was the first case in Illinois history to strike down a districting plan for violating the state constitution's compactness requirement. A year later, the court in Martin v. Soucie, 441 N.E.2d 131 (Ill. App. Ct. 1982), relied upon *Schrage* to defeat an apportionment plan for county board elections.

For other state cases finding violations of state law compactness requirements, see Preisler v. Doherty, 284 S.W.2d 427 (Mo. 1955) (invalidating state senatorial redistricting of the City of St. Louis); State *ex rel.* Barrett v. Hitchcock, 146 S.W. 40 (Mo. 1912) (invalidating entire Missouri state senatorial apportionment on constitutional compactness and population equality failings); *In re* Sherill, 81 N.E. 124 (N.Y. 1907) (invalidating entire 51-district New York state senatorial apportionment on grounds that two districts failed to meet constitutional compactness and population equality requirements); *In re* Livingston, 160 N.Y.S. 462 (Sup. Ct. 1916) (voiding apportionment of assembly districts within a senate district).

– Ex. 8861 –

the state courts in the two states, Iowa and Colorado, that embody compactness standards quantitatively are among the few courts to have found compactness violations.[150] Generally, however, state courts purport to enforce these requirements while signaling that they will seriously scrutinize only dramatic departures from the requirements. Often, courts will not invalidate individually noncompact districts unless they find the entire districting plan to be insufficiently compact.[151] In addition, when state courts do confront challenges to district compactness, they typically rely on their own intuitive visual assessments — even when the parties have presented expert testimony analyzing districts through quantitative measures.[152]

This article provides quantitative information that bolsters the sense one gets from reading the caselaw that qualitative compactness standards have little practical effect. Using social-scientific methods that we describe and justify later in this article, we have compared the compactness of U.S. House of Representatives districts in the 1980s and 1990s in those states that legally require compact congressional districts with those that do not. Table 1 presents these results.

150. *See* Acker v. Love, 496 P.2d 75 (Colo. 1972); *In re* Legislative Districting of Gen. Assembly, 193 N.W.2d 784, 791 (Iowa 1972).

151. *See, e.g.*, Preisler v. Kirkpatrick, 528 S.W.2d 422, 426-27 (Mo. 1975) (finding all but two districts to be within compactness requirements and holding that "considering the overall, state-wide plan developed . . . the districts established substantially comply with the compactness requirement" of the Missouri Constitution); Opinion to the Governor, 221 A.2d 799 (R.I. 1966) (finding districting plan valid absent "a complete departure from the requirement for compactness") (advisory opinion). *See generally* Grofman, *Criteria for Districting, supra* note 7, at 86.

152. A typical example is the recent decision of the Virginia Supreme Court in Jamerson v. Womack, 423 S.E.2d 180 (Va. 1992). There the plaintiffs challenged, on compactness grounds, two state senate districts, at least one of which was designed to be a majority-black district. The court acknowledged that one of the districts was longer than any other in the state and that the enacted plan split more counties than other plans the legislature had considered. At trial, each side offered expert testimony on the compactness of the districts and plan. On appeal, the Virginia Supreme Court did not evaluate this testimony or engage in any analysis of the quantitative measures presented. Instead, the court found it sufficient that the expert testimony was in conflict and that the trier of fact had accepted one side's testimony. 423 S.E.2d at 186.

Similarly, in Schrage v. State Bd. of Elections, 430 N.E.2d 483 (Ill. 1981), the Illinois Supreme Court chose to "rely on a visual examination of the questioned district as other courts have done," finding that "a more precise measurement is unnecessary." 430 N.E.2d at 487; *cf. In re* Legislative Districting of the State, 475 A.2d 428, 437 (Md. 1984) ("With the possible exception of Colorado . . . no jurisdiction has defined or applied the compactness requirement in geometric terms. On the contrary, most jurisdictions have concluded that the constitutional compactness requirement, in a state legislative redistricting context, is a relative rather than an absolute standard.") (citation omitted).

– Ex. 8862 –

TABLE 1
COMPACTNESS OF U.S. HOUSE DISTRICTS IN 1980S AND 1990S BY PRESENCE OF COMPACTNESS REQUIREMENTS[153]

	Dispersion Scores		Perimeter Scores	
	Range	Mean	Range	Mean
1980s				
Compactness Required N=33	.05-.59	.39	.11-.59	.34
Compactness Not Required N=396	.06-.71	.37	.02-.72	.27
1990s				
Compactness Required N=30	.05-.58	.36	.06-.54	.26
Compactness Not Required N=398	.03-.64	.36	.01-.72	.24

Note: States with only one congressional representative are excluded. Hawaii, Iowa, Missouri, Montana, Virginia, West Virginia and Wyoming require compactness for congressional districts. Montana in the 1990s and Wyoming in both decades are excluded as single-district states.

For present purposes, it is sufficient to know that the quantitative measures of district compactness in Table 1 vary from 0.0 to 1.0, with more compact districts scoring higher on this scale. As Table 1 reveals, there appears to be no meaningful difference, either in the 1980s or the 1990s, between the compactness of congressional districts in states that legally require it and those that do not.[154] This result suggests that redistricting bodies do not take compactness into account any more when it is legally required, and that courts have not been willing to enforce such requirements in ways that affect outcomes.

The number of states that require compactness of congressional districts is small; hence, conclusions based on these data must be tentative.[155] Nevertheless, the best inference from the available information is that, as presently enforced, qualitative state compactness requirements do little to stimulate greater regularity in congressional district shapes.

153. Information provided by Election Data Services, Inc.

154. Only the perimeter measure in the 1980s shows enough of a difference to be possibly meaningful. We discuss this measure *infra* at text accompanying notes 202-04.

155. With so few states requiring compactness, individual cases could greatly influence the results. Hawaii's districts are relatively noncompact because they are artifacts of the unusual geography (island composition); balancing this extreme, perhaps, are Iowa's relatively compact districts based, in part, on its rather square shape.

B. *Compactness Requirements Under the Voting Rights Act*

Legal requirements that districts be compact also arise under the VRA.[156] The Court has yet to give this requirement much specific content. Last Term, however, in another significant voting-rights case, *Growe v. Emison*,[157] the Court intimated that state and local jurisdictions, as well as lower courts, were paying insufficient attention to compactness. *Growe* might suggest that the Court is likely to return soon to the requirement of compactness under the VRA.[158]

Even before the Supreme Court's focus on compactness last Term, questions of appropriate district shape were becoming increasingly important in the lower courts.[159] Under the VRA, compactness arises both as an element of plaintiffs' claims and as a defense put forward by jurisdictions. Compactness concerns can also arise at both the liability and remedial stages of litigation. To date, only a handful of federal courts have addressed these issues; like the state courts, those that have done so have relied on intuitive, eyeball assessments rather than quantitative standards. The decisions display considerable inconsistency.[160]

At one pole, some courts have viewed the governmental interest in enhancing minority representation as sufficient in and of itself to justify contorted district shapes. The leading example is *Dillard v.*

156. *See* Thornburg v. Gingles, 478 U.S. 30, 50-51 (1986).

157. 113 S. Ct. 1075 (1993).

158. In *Growe*, a federal district court, after having appointed a special master, had crafted a redistricting plan for Minnesota's state senate. In overturning that decision, the Supreme Court described the one state senate district, which the district court had believed the VRA required, as an "oddly shaped creation." The Court also characterized as "dubious" the district court's assumption that this district was "geographically compact" under *Gingles*. 113 S. Ct. at 1085. The Court described this district, Senate District 59, as "stretching from south Minneapolis, around the downtown area, and then into the northern part of the city in order to link minority populations." 113 S. Ct. at 1083. In total population figures, the district was 43% black and 60% minority. 113 S. Ct. at 1083. Because the Court overturned the district court's judgment on other grounds, these comments are dicta, but they might nonetheless be suggestive.

159. *See generally* Pamela S. Karlan, *Maps and Misreadings: The Role of Geographic Compactness in Racial Vote Dilution Litigation*, 24 HARV. C.R.-C.L. L. REV. 173, 199 (1989) ("Geographic concerns played only a minor role in the legislative history of amended Section 2. In the past two years, however, geographic compactness has moved to the forefront of vote dilution litigation . . . .") (footnote omitted).

160. In these cases, the courts sometimes discuss compactness in isolation and sometimes in terms of the appropriate trade-offs between it and other values. When courts treat compactness as the sole variable, they frame the judicial inquiry as whether districts are "sufficiently compact." When courts consider the appropriate trade-offs between shape and other relevant redistricting values — for example, avoidance of vote dilution, compactness, preservation of communities of interest — the question is what degree of compactness is consistent with other legitimate redistricting policies.

Although the way the question is framed initially may have some effect on shifting burdens of evidentiary production, ultimately these two approaches amount to the same inquiry. Whether a district is "sufficiently" compact, for example, is largely a function of how one weighs the value of compactness against competing districting values.

– Ex. 8864 –

Baldwin County Board of Education,[161] in which the court rejected the county's argument that a proposed majority-minority school board district would be "too elongated and curvaceous."[162] The court explained that compactness "does not mean that a proposed district must meet, or attempt to achieve, some aesthetic absolute, such as symmetry or attractiveness."[163] Thus, the court accepted plaintiffs' proposed districting plan for the county board of education, even though it included this narrow, elongated district.[164] Other courts have taken a comparative approach. They hold minority-controlled districts that "look rather strange" to be nonetheless sufficiently compact when they "are not materially stranger in shape than at least some of the districts contained" in a jurisdiction's current districting plan.[165]

At the other extreme, some courts decline to find substantive VRA liability when the only possible minority-controlled districts are, in the court's view, insufficiently compact. Thus, one federal court recently rejected a proposed district as "an odd contortion" that "reaches down to get a pocket of white voters in the south-east-central part of the county and then curves around to the west and then back to the north-east corner of the county . . . ."[166] Rhetorically asking, "does a legislative body have to draw lines in a distorted way?" the court answered "no."[167] Similarly, another federal court recently rejected a VRA challenge to a county supervisory district in which the plaintiffs' proposed plan joined black residents from three distinct municipalities into a single district. The court concluded that "[t]his exercise results in extreme gerrymandering," with the district being "drawn in an unusual or illogical manner."[168]

Courts also merge the definition of compactness into other relevant districting criteria, such as whether the district preserves a "commu-

161. 686 F. Supp. 1459 (M.D. Ala. 1988).

162. 686 F. Supp. at 1466.

163. 686 F. Supp. at 1465. Not anticipating *Shaw,* the court went on to add that "[a]n aesthetic norm" would be "an unworkable concept, resulting in arbitrary and capricious results, because it offers no guidance as to when it is met." 686 F. Supp. at 1465-66.

164. The court also noted that the county's proposed plan contained a similarly shaped district, and that the board's superintendent had testified that the district posed no administrative or other problems. 686 F. Supp. at 1466.

165. Jeffers v. Clinton, 730 F. Supp. 196, 207 (E.D. Ark. 1989); *see also* Neal v. Coleburn, 689 F. Supp. 1426, 1437 (E.D. Va. 1988) (stating that asymmetrical districts are acceptable when "in line with the configurations of electoral districts that have been approved in other cases").

166. Bryant v. Lawrence County, 814 F. Supp. 1346, 1350 (S.D. Miss. 1993). The court also concluded that the plaintiffs drew the proposed districts "without regard to natural geographic boundaries, [or] splitting of precincts." 814 F. Supp. at 1350.

167. 814 F. Supp. at 1351.

– Ex. 8865 –

nity of interest" or enables "effective representation." Yet, even when courts merge these inquiries, the decisions continue to conflict. For example, the *Dillard* court said "a district would not be sufficiently compact if it [were] so spread out that there was no sense of community"[169] and then went on to accept a narrow district that stretched most of a county's length. In contrast, the court in *East Jefferson Coalition for Leadership and Development v. Jefferson Parish*[170] adopted a similar "recognizable community" definition of compactness,[171] but, in applying the standard, it held that a thirty-five-sided district that crossed the Mississippi River failed to meet the standard. The failure to create this district, therefore, did not constitute a VRA violation.[172]

Different federal courts have also interpreted compactness requirements inconsistently with respect to the same geographic features. A recurring issue is whether minority areas in different regions can be joined through corridorlike connections. One court rejected a districting plan that connected two black populations by a "long, narrow corridor." The court labeled this "unacceptable 'gerrymandering' " that "arbitrarily cuts diagonally through the center of the county."[173] But another court explicitly approved a "corridor" between black populations, concluding that it was "not unreasonably irregular in shape,

169. Dillard v. Baldwin County Bd. of Educ., 686 F. Supp. 1459, 1466 (M.D. Ala. 1988) (noting that a district would have "no sense of community . . . if its members and its representatives could not effectively and efficiently stay in touch with each other; or . . . if its members and its representatives could not easily tell who actually lived within the district").

170. 691 F. Supp. 991 (E.D. La. 1988).

171. "A proposed district is sufficiently compact if it retains a natural sense of community. To retain that sense of community, a district should not be so convoluted that its representative could not easily tell who actually lives in the district." 691 F. Supp. at 1007.

This principle appears similar to one that Bernard Grofman has recently advanced under the label of "cognizability":

> I wish to argue that districts can be so far from cognizable that they violate what we might think of as a due process component of equal protection by damaging the potential for "fair and effective representation." By "cognizability," I mean the ability to characterize the district boundaries in a manner that can be readily communicated to ordinary citizens of the district in commonsense terms based on geographical referents. . . .
>
> . . . .
>
> Egregious violations of the cognizability principle can be identified by making use of standard criteria of districting, such as violation of natural geographic boundaries, grossly unnecessary splittings of local subunit boundaries (such as city and county lines), and sunderings of proximate and contiguous natural communities of interests.

Grofman, *Vince Lombardi, supra* note 7, at 1262-63 (footnotes omitted). Grofman acknowledges that he does not yet have a clear operational test for noncognizability, which he recognizes is especially problematic because cognizability is best thought of as a continuum. *Id.* at 1262.

172. 691 F. Supp. at 1007. The court nonetheless did invalidate Jefferson Parish's unusual council-election scheme, which was not used anywhere else in Louisiana, on other grounds. 691 F. Supp. at 994 n.2, 1008.

173. Potter v. Washington County, 653 F. Supp. 121, 130 (N.D. Fla. 1986).

– Ex. 8866 –

given the population dispersal within the County."[174]

Whether any of these federal court decisions merely appear to be in tension with each other, or directly conflict, cannot be determined without an intensely local appraisal of each geographic context. At the least, however, these decisions, and others like them,[175] reveal considerable uncertainty as to how courts and other bodies interpret and weigh compactness against other relevant redistricting values. This is not surprising: compactness is the conceptual point at which the tension between the traditional American commitment to territorial districting and the VRA concern for fair representation of group interests must be resolved.[176]

The appropriate trade-off between enhancing minority representation and respecting the interests reflected in a territorial-based districting system is both elusive and an issue of considerable political and

174. Neal v. Coleburn, 689 F. Supp. 1426, 1437 (E.D. Va. 1988).

175. *See, e.g.*, Magnolia Bar Assn. v. Lee, 793 F. Supp. 1386 (S.D. Miss. 1992) (finding no § 2 violation in Mississippi judicial redistricting, partially on grounds that majority-minority districts could not be drawn without splitting counties), *affd.*, 994 F.2d 1143 (5th Cir. 1993); Wesch v. Hunt, 785 F. Supp. 1491, 1499 (S.D. Ala.) (adopting a court-decreed plan that creates a majority-African-American congressional district for Alabama without "extensive gerrymandering"), *affd. sub nom.* Camp v. Wesch, 112 S. Ct. 1926 (1992), *and affd. sub nom.* Figures v. Hunt, 113 S. Ct. 1233 (1993); Burton v. Sheheen, 793 F. Supp. 1329, 1356 (D.S.C. 1992) ("[I]n light of § 2's strong national mandate . . . a district is sufficiently geographically compact if it allows for effective representation."); Gunn v. Chickasaw County, 705 F. Supp. 315, 322-23 (N.D. Miss. 1989) (rejecting proposed remedial plan partially on grounds that it did not give proper consideration to existing political subdivisions and cohesive neighborhoods); Carstens v. Lamm, 543 F. Supp. 68 (D. Colo. 1982) (fashioning a court-decreed congressional redistricting plan for Colorado); Rybicki v. State Bd. of Elections, 574 F. Supp. 1082, 1097 (N.D. Ill. 1982) (refusing to invalidate the Illinois General Assembly's districting plan as "noncompact" partially on grounds that plaintiffs' proposed plan contained similarly noncompact districts).

176. This tension is also apparent in the district court cases. Some courts tend to treat the VRA as creating an affirmative duty to draw majority-minority districts when reasonably possible. *See, e.g.*, DeGrandy v. Wetherell, 794 F. Supp. 1076, 1085 (N.D. Fla. 1992) ("[W]e conclude that 'the law supports the drawing of a minority district where, in light of minority concentrations and community of interests, such a district can reasonably be drawn.' ") (quoting Report of the Special Master at 14 (May 18, 1992)), *cert. granted sub nom.* Johnson v. De Grandy, 113 S. Ct. 2437 (1993); Jeffers v. Clinton, 730 F. Supp. 196, 205 (E.D. Ark. 1989) ("If . . . reasonably compact and contiguous majority-black districts could have been drawn, and if racial cohesiveness in voting is so great that . . . black voters' preferences for black candidates are frustrated . . . the outlines of a Section 2 theory are made out."), *affd.*, 498 U.S. 1019 (1991).

Several recent decisions, however, have emphatically denied any duty on the part of the legislature to maximize minority political representation. *See, e.g.*, Teague v. Attala County, 807 F. Supp. 392, 404 (N.D. Miss. 1992) ("The Voting Rights Act never was intended as a vehicle for creating 'safe' black or other minority seats."); Nash v. Blunt, 797 F. Supp. 1488, 1496 (W.D. Mo. 1992) ("[W]e do not believe Congress intended the Act to require maximum representation."), *affd. sub nom.* African Am. Voting Rights Legal Defense Fund, Inc. v. Plunt, 113 S. Ct. 1809 (1993); Turner v. Arkansas, 784 F. Supp. 553, 573 (E.D. Ark. 1991) (Section 2 of the VRA "is not violated . . . simply because [a] legislature does not enact a districting plan that maximizes black political power or influence."), *affd.*, 112 S. Ct. 2296 (1992).

According to a former Assistant Attorney General, Civil Rights Division, "[t]here is one thing the Civil Rights Division does not do: It does not require, because the law does not require, the maximization of minority representation." Dunne, *supra* note 38, at 1128.

philosophical conflict. In the absence of some guidelines for making this trade-off, the likely result will be increasingly inconsistent judicial decisions and manipulative uses of the VRA by districting bodies. One alternative is to develop quantitative approaches for evaluating district appearance. In Part III, we turn to that task.

III. Defining District Appearance Consistently

Recent developments in both theory and technology now make it possible to evaluate district "appearances" in a systematic and consistent way. Quantitative information can now be generated concerning different aspects of an election district's shape, including how much its borders meander and how much the area it covers is concentrated or diffused. In this Part, we show how such quantitative measures provide a better alternative to judging district "compactness" than the intuitive approaches courts used before *Shaw*. In addition, *Shaw* elevates the stakes considerably in the search for a workable means of defining "irregular" districts, for, with a constraint of this sort constitutionally enshrined, judicial power over the politics of redistricting is potentially expansive, undisciplined, and explosive. Quantitative measures for assessing election-district shapes provide perhaps the most promising approach to turning *Shaw* into a set of relatively clear and principled guidelines.

The theory of *Shaw* makes social perceptions about district appearance central. This might suggest that these social perceptions are what we should seek to quantify. Nonetheless, for several reasons, we focus instead on district appearance itself. Although we believe the impulse behind *Shaw* ultimately rests on judicial concerns for social perceptions, we believe those concerns must necessarily operate at a general level, rather than forming the basis for concrete decisions regarding particular districts. That is, *Shaw* is not likely to become a transmission belt through which social perceptions are directly relayed, case by case, into constitutional doctrine. The spectre of legal decisions turning on public opinion surveys is no more appealing here than in other areas in which legal doctrine is nonetheless responsive, in a general sense, to social perceptions. The problem is not just the unadministrability of any legal standard grounded on such vaporous foundations. More importantly, the relevant social perceptions would have to be ones the legal system could legitimately credit; only perceptions that are properly informed, for example, and generated under normatively appropriate conditions could plausibly be relevant. Thus, the relevant social perceptions would have to reflect acceptance of governing law, such as the VRA itself, as well as awareness of relevant

general facts, such as, perhaps, the way in which redistricting routinely operates.

As a result, courts implementing *Shaw* cannot treat social perceptions as a brute fact on which to ground decisions, even if we could measure those perceptions accurately. Courts must inevitably play the more active role of attributing normativity to certain perceptions; in the mediating legal language typically used in such contexts, courts must decide which social perceptions to deem "reasonable." Ordinary observers, for example, might recoil at the shape of many or most congressional districts today, but *Shaw* does not penetrate this deeply into the foundations of current politics. *Shaw* is designed to deal with aberrational contexts, not routine ones — with "highly irregular" and "bizarre" districts, not common ones. Courts will have to determine legitimately and consistently when this line can be said to have been crossed.

Shaw thus sets into motion constitutional doctrine ultimately concerned with social perceptions and collective understandings, but a doctrine that courts must necessarily implement with some critical perspective on these perceptions. At the moment, there appear to be two alternative methods by which courts might take on this role. The first is for courts to evolve, on a case-by-case basis, a series of qualitative judgments concerning when districts are sufficiently "irregular" to trigger strict scrutiny. In the context of redistricting, this common law evolutive approach poses multiple dangers. Individual judges do not confront enough redistricting cases to be likely to develop sufficiently informed intuitions about the broader pattern of district shapes. If left to their untutored qualitative assessments, judges are likely to render inconsistent and unpredictable decisions, as has occurred with previous efforts to enforce compactness standards. Yet the costs of uncertainty in this area are particularly high. Redistricting forces on all sides will struggle to exploit any uncertainties for political gain. Fomenting yet more litigation and further delaying the time at which plans become effective create additional costs.

The second alternative for implementing *Shaw* — the quantitative approach we develop here — is more promising, not just for implementing *Shaw,* but for other, related purposes. First, *Shaw* requires that values associated with district appearance be judicially separated from other relevant redistricting concerns; district appearance triggers strict scrutiny, after which jurisdictions must offer sufficient justifications to account for "highly irregular" shapes. To implement this framework, district appearances must therefore be separated, at least initially, from other districting values. Before *Shaw,* many commenta-

tors had resisted treating appearance or compactness as of any intrinsic value; compactness might be associated with relevant substantive districting values, like preserving communities that shared common political interests, but commentators viewed compactness as a poor proxy for those values.[177] Similarly, commentators disagreed as to whether a requirement of compactness is an important instrumental prophylactic against partisan and other forms of gerrymandering.[178]

177. Commentators have generally argued that compact districting directly advances three principal values: enhanced communication between representatives and constituents; greater voter knowledge of their representatives and of their political "neighbors"; and greater trust in the legitimacy of a political system in which districts appear "fairly" shaped — or, at least, not obviously unfairly shaped.

With respect to the first value, some have argued that technological changes — such as telephones, modern highway systems, fax machines, and the like — considerably undermine the relationship between compactness and effective communication. *See, e.g.*, CAIN, *supra* note 7, at 32-33. At the same time, communication still often takes place in group contexts, with legislators meeting all manner of boards, committees, organizations, governmental bodies, and so on. Compact districts might facilitate communication because they are likely to hold in check the number of such groups. Empirical evidence on this question is slim. "Community-based" districts make it more likely that constituents can identify their congressmen, though this result does not necessarily mean that such districts encourage better communication. Richard G. Niemi et al., *The Effects of Congruity Between Community and District Congruity on Salience of U.S. House Candidates*, 11 LEGIS. STUD. Q. 187 (1986). There is, of course, no guarantee that compact districts enhance communication, but the question is whether there is any meaningful tendency in this direction.

With respect to voter knowledge, the above study suggests, not surprisingly, that constituents are more likely to know the names of their congressmen when the lines of districts and "natural" communities coincide. *See id.* at 187-88 (citing studies). At the same time, "meaningful" and compact districts are not necessarily the same. When cities or other political subdivisions are themselves noncompact, requiring compact districting would be at odds with this very concern. *See* Grofman, *Vince Lombardi*, *supra* note 7, at 1263 (advocating a "cognizability," rather than a compactness, standard).

Finally, with regard to the claimed relationship between compactness and political legitimacy, critics have argued the public knows so little about districting that any such effect can be safely ignored. *See* CAIN, *supra* note 7, at 188-91. *Shaw*, however, with its evident concern about social perceptions, appears to reject this argument.

Of course, to the extent that departures from compactness are necessary to promote other values, such as enhancing fair and effective minority representation, a complete assessment of compactness must weigh the costs of departing from it against whatever values it might intrinsically serve. Cain writes:

> Those who argue for the importance of compactness must be willing to accept limitations on the achievement of equity for minorities. . . . From the perspective of the white, median voter in this country, compactness is desirable, since it enhances the strength of the majority. From the perspective of the nonwhite population, compactness deprives them of equitable representation for the same reason.

Id. at 51.

178. For a strong argument that compact districting does tend to minimize impermissible gerrymandering, see Justice Stevens's separate opinion in Karcher v. Daggett, 462 U.S. 725, 755-58 (1983) (Stevens, J., concurring). Nevertheless, compactness certainly is not sufficient to guarantee fair distribution of power among competing groups — assuming, for the moment, that fairness is to be measured through some degree of proportionality between groups in the electorate and in the representative body. An equitable distribution of power depends on the geographical distribution of the relevant groups. In addition, computer programs now allow the creation of large numbers of potential districts, all of them compact, but differing in their partisan, racial, and other characteristics. Thus, the ability of compactness to serve as a partial constraint on gerrymandering is lesser now than previously. *See generally* CAIN, *supra* note 7, at 35-38.

For Fourteenth Amendment purposes, however, the terms of the debate have shifted. *Shaw* isolates district appearance and turns it into a threshold factor for setting strict scrutiny into motion. Thus, district appearance must now be constitutionally assessed, in and of itself, regardless of whether commentators might value it intrinsically, instrumentally, or not at all.

Second, outside of constitutional law, *Shaw* will also likely pressure courts to focus more attention on what compactness ought to mean under the VRA. Statutory requirements of compactness will be implicated in numerous voting-rights cases, particularly for dispersed minority populations, thus generating the need for clear guidelines implementing this element of the VRA. Quantitative measures of compactness are a way of providing clear and consistent standards for courts and reapportionment bodies to follow.

Third, such measures can be used to shift the focus of courts and others from individual districts, examined in isolation, to the pattern of districting within a state, as well as nationwide. We can also compare the shapes of districts historically, enabling examination of the response of district shapes to various forces over time. This kind of information can make judicial inquiry into district "appearances" meaningful by establishing the baselines against which individual districts can be evaluated. Absent such baselines, different judges are likely to find quite different districts failing their intuitive conception of "bizarre." This information is also crucial for general public discussion of where we are and ought to be in the legal regulation of the redistricting process. Thus, in Part IV, we are able to rank all the current U.S. congressional districts, compare North Carolina District 12 to other districts, indicate how many majority and minority districts are designed in ways that might trigger the strict scrutiny of *Shaw,* and compare U.S. congressional districts over time.

The information we provide here should be used carefully, and we must note several caveats at the outset. As in most legal areas, quantitative measures for redistricting are not a panacea. With respect to the question in *Shaw,* quantitative measures cannot be used mechanically to determine whether a district is "bizarre." Even after district shapes are catalogued in absolute terms, the significance of the results will continue to depend on the specific contexts in which particular districts exist. Maryland, for example, is a convoluted state, and any "irregular" district there is presumptively less troubling than a similar district in the square state of Colorado. The results of our quantitative studies enable meaningful threshold comparisons. The ultimate signif-

icance of any quantitative assessment of district "appearance," however, necessitates analysis of the specific political and geographic context in which particular districts originated.

In addition, we do not suggest that there is some ideal level of compactness that every district ought to meet. Nor do we suggest that there is some objective level of "highly irregular" that every district ought to avoid. Neither *Shaw* nor the VRA entail any requirement that districts meet some Platonic ideal of shape. Similarly, at what point irregular districts become "too irregular" is a political and legal judgment about the appropriate trade-off between competing values; quantitative measures can provide absolute and comparative information about districts, but they cannot resolve this question of judgment. Once such judgments are made, however, quantitative measures can assist in ensuring that they are carried out consistently.

Redistricting is an area in which quantitative standards have demonstrated their appeal in the past. Once *Baker v. Carr*[179] declared malapportionment claims justiciable, legal principles gravitated quickly, indeed almost ineluctably, to the one-person-one-vote quantitative formula. Although there is disagreement over the extreme mathematical exactitude the Court has given this principle,[180] there is little disagreement that one person, one vote is the appropriate ideal. Quantitative measures of compactness cannot function in precisely the same way as the one-person-one-vote measure, because no obviously analogous ideal exists toward which all district shapes should converge. Yet, after *Shaw,* similar forces may impel courts toward using quantitative approaches to define, at least, the outer-boundary constraints the Constitution now imposes on the conjunction of race-conscious districting and district shape. Given that no approach to redistricting is politically neutral, public confidence in both courts and redistricting bodies is likely to be enhanced through quantitative standards capable of being applied in consistent ways.

A. *The Nature of the Problem*

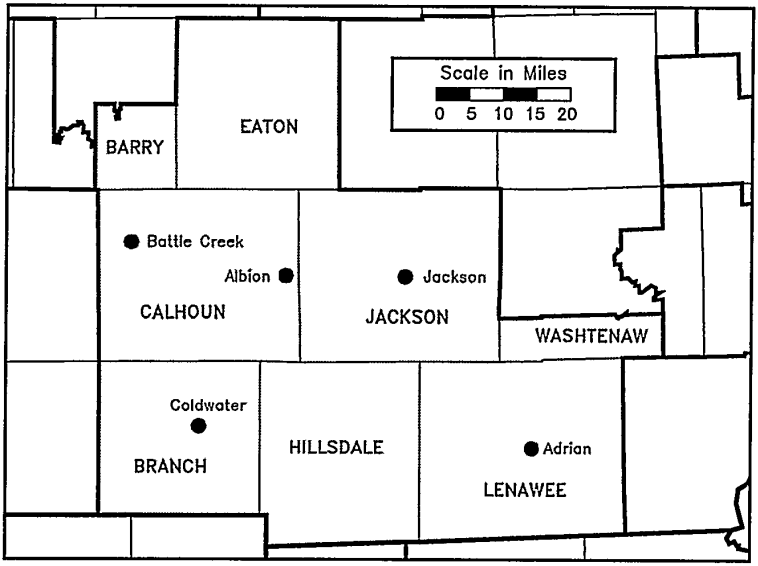
Shaw suggests that North Carolina District 12 is self-evidently so extreme in design that it stands out at a glance. Thus, while Justice O'Connor acknowledges the possible "difficulty of determining from the face of a single-member districting plan that it purposefully distinguishes between voters on the basis of race," she emphasizes that

179. 369 U.S. 186 (1962).

180. *See* Karcher v. Daggett, 462 U.S. 725 (1983).

"proof sometimes will not be difficult at all."[181] As another example, she points to the obviously "tortured"[182] municipal boundaries in *Gomillion v. Lightfoot.*[183]

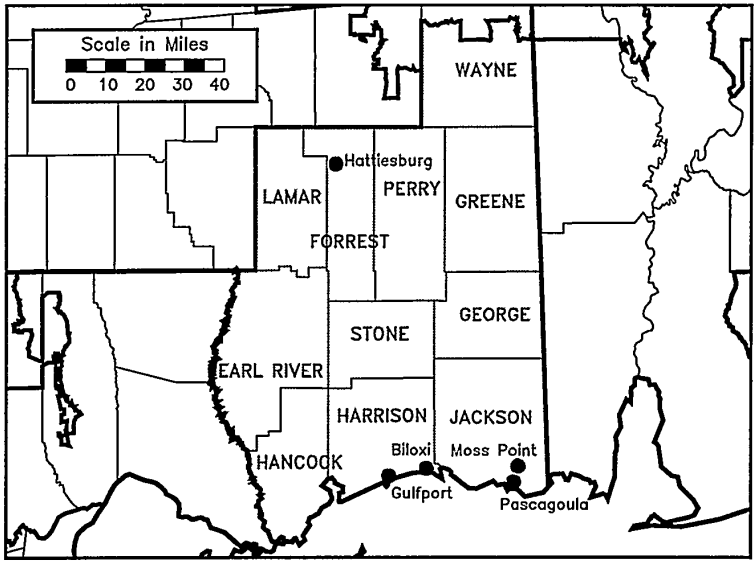
The task of determining when district appearances are so "highly irregular" as to require strict scrutiny, however, will be more difficult than these comments suggest. First, the language of "appearance" obscures the fact that districts might be oddly shaped along several different dimensions. In the absence of a clear conceptual understanding of what dimensions of district appearance are relevant, the basis for judging districts will be unclear. Different observers will find different aspects of districts to be troubling. Second, district shapes vary along a continuum; they do not come marked in two clearly distinct categories of the reasonably regular and the bizarre. Third, one cannot adequately distinguish the relevant variations among districts through intuitive, eyeball assessments.



To begin to understand the nature of the problems, consider Figures 2 and 3, which show thirteen current congressional districts drawn after the 1990 Census.

181. Shaw v. Reno, 113 S. Ct. 2816, 2826 (1993). As the Court puts it, in some cases, a district is "so highly irregular that, on its face, it rationally cannot be understood as anything other than an effort to 'segregat[e] . . . voters' on the basis of race." 113 S. Ct. at 2826 (quoting Gomillion v. Lightfoot, 364 U.S. 339, 341 (1960)).

182. 113 S. Ct. at 2826-27 (discussing *Gomillion*).



183. 364 U.S 339 (1960).

Most observers would probably agree that Michigan CD7 (Figure 2(a)) is considerably more compact than Texas CD18 (Figure 2(g)), and that Michigan CD9 (Figure 3(a)) is more compact than Florida CD22 (Figure 3(f)). Beyond these observations, it becomes more difficult to make such assessments; but the districts in Figures 2(a) and 3(a) might also generally seem reasonably compact. Perhaps there would even be agreement that the districts in Figures 2(g) and 3(f) are irregular, maybe extremely so. Line-drawing problems, however, quickly become substantial. If the districts in Figures 2(g) and 3(f) were minority-dominated districts, would their design be so irregular as to be presumptive evidence of districting processes in which race had exerted too dominant an influence over other values? What about districts "close to" the most distorted ones in the country — such as districts "in between" Figures 2(f) and 2(g) or in between Figures 3(e) and 3(f)?

Keep in mind that there are 428 congressional districts in states with more than one representative. Given this large number, the range of shapes illustrated in Figures 2 and 3 is not surprising. Indeed, one would expect an almost continuous gradation from very regular to very irregular. Of course, a single court would not have to

consider all 428 districts simultaneously. Litigation involving a single state would typically involve only five to twenty districts. Nevertheless, consistent standards are needed to guide and constrain policymakers. Left to intuitive judgments, policymakers will find the task of ordering districts by appearance unlikely to yield consensus.[184]

Part of the difficulty involved in creating standards stems from the fact that "the" appearance of a district could mean one of several things. District shape can be measured along several seemingly relevant dimensions. We will define these different dimensions in technical detail shortly, but we first describe them in more intuitive terms.

First, we might ask how dispersed, or spread out, a district is. This question is commonly taken to mean how efficiently the district covers the territory it includes: in common terms, the question is how "round" or "square" the district is, or how "long" it is versus how "wide."[185] From this perspective, the crucial issue is the degree to which a district has a central core and the extent to which all points in the district are relatively close to that core. If we judge districts in terms of how dispersed they are, circular or square districts will be the most compact. Extremely long and narrow ones are much more dispersed and hence would be judged as less compact, as would districts that tie together two or more core areas with narrow corridors. Dispersion is also worse if "fingers," or other protrusions, stick out from the main body of a district.

Second, one might judge districts by the regularity or length of their perimeters. The important concern in this assessment ought not to be the number of sides, but how similar and regular the sides are. From this perspective, what matters is how much a district's borders wander around in contorted ways. Legislative districts with smooth borders, especially ones of equal length, are most regular or compact. When borders are not straight or when they repeatedly twist and turn, perimeter measures will be accordingly low.

Third, we might judge districts in terms of how regularly they distribute the population in and around the district. We are less accustomed to judging shapes this way; it does not play a role in elementary geometry. In the context of legislative districting, however, such a measure makes some sense. Legislators represent people, not land.

184. *Shaw* presumably also applies to state legislative districts. In upper houses of state legislatures, the number of districts is often 30-50, and in lower houses the number is often 100 or more. HAROLD W. STANLEY & RICHARD G. NIEMI, VITAL STATISTICS ON AMERICAN POLITICS 153 tbl. 4-6 (4th ed. 1994).

185. One should not confuse these questions with how big a district is in absolute size. Districts in sparsely populated areas of a state are necessarily larger in overall size than those in large urban areas; given one-person-one-vote requirements, this disparity cannot be avoided.

Moreover, the way in which district lines move through or around population concentrations is at the heart of concerns regarding such devices as "cracking" or "packing" minority populations. One way to systematize these concerns is to examine the size of the population in the district and compare it to the population outside but near the district. From this perspective, a district that encapsulates most of the population in some well-defined area would be highly regular. Exclusion of large numbers of people who live within such an area makes a district fare much worse on this dimension.

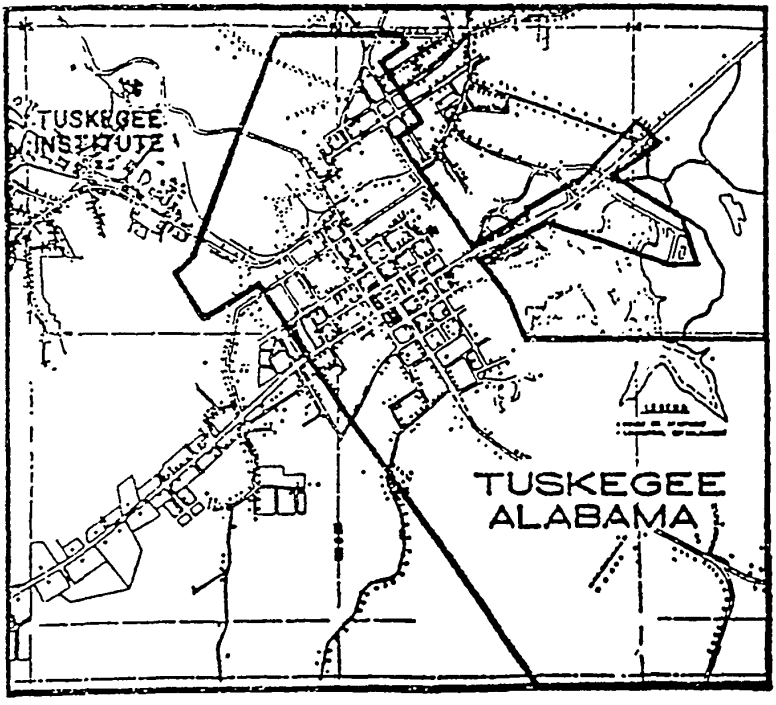
Choosing among these different dimensions makes a significant difference in judgments about the "appearance" of legislative districts. A district can be "highly irregular" in one dimension but not in others. Consider the contrast between "dispersion" and "perimeter" in, for example, Texas CD18 (Figure 2(g)). This district includes most of the city of Houston, is by far the most Democratic in Texas, and was designed to yield a fifty-one percent black population (forty-nine percent black voting-age population). The adjoining Texas CD29 was designed in 1991 as a new Hispanic district, thought to be required under the VRA, and has a Hispanic population of sixty percent (voting-age population of fifty-four percent). To achieve these dual objectives, the redistricters carved heavily Hispanic blocks out of Texas CD18 and moved them next door into Texas CD29.[186]

Texas CD18 is not spread over a large area, hence it does not enclose a highly dispersed population. Despite being part of a large metropolitan area, its bands of streets and neighborhoods do not stretch out excessively. Although it contains extremely narrow corridors, it does not, like North Carolina CD12, stretch between cities many miles apart. Consequently, in terms of the first dimension described above — dispersion — Texas CD18 is not highly irregular. Yet, to some observers, the shape of this district is likely to be as troubling as that of North Carolina CD12. Its borders, especially on the west, meander in and out in an almost continual dance. In the second sense described above — perimeter regularity — this district is certainly extreme.

Next, consider Florida CD22 (Figure 3(f)). This district contains the barrier islands and lucrative beachfront properties of Florida's Gold Coast and has the highest percentage of over-sixty-five residents of any U.S. congressional district. This district is not a minority one, though its shape resulted in part from efforts to maximize the black

186. The facts concerning these districts are drawn from MICHAEL BARONE & GRANT UJIFUSA, THE ALMANAC OF AMERICAN POLITICS 1994, at 1250-51, 1275-76 (Eleanor Evans ed., 1993) (describing the creation and composition of Texas CD18 and Texas CD29, respectively). In the first election in Texas CD29, a Hispanic did not win the seat. *Id.* at 1276.

percentage in the adjoining 23d and 17th districts.[187] The borders of Florida CD22 are relatively smooth.[188] With few exceptions, the district does not snake into and out of the neighborhoods of cities. While in some places it moves farther inland than in others, this pattern is obviously necessary to include a sufficiently large population. In terms of perimeter, this district is fairly regular.[189] Yet in length and width, the district stretches nearly 100 miles from north to south and is never more than about five and a half miles wide. This shape makes it look more like a flagpole than any other district in the country. In the sense of dispersion — in terms of its territory *not* being close together — this district is certainly extreme.



Intuitive assessments based on visual appearance alone are thus likely to produce tremendous uncertainty. Indeed, if we now return to what is frequently considered the most egregious and self-evident example of the manipulation of district boundaries, the classic *Gomillion* case, the difficulties become even more obvious. Consider Figure 4, the Tuskegee municipal boundaries before and after the city council redrew them.

187. *Id.* at 320.

188. In part, this apparent smoothness is a function of the scale of the map. If each city were shown in detail, one would see more border irregularities.

189. It turns out, as we shall see, that this district is so extremely long and narrow that, together with the lengthened western border, it is relatively noncompact with respect to its perimeter. Nonetheless, at first glance, its border characteristics do not appear troubling.

FIGURE 4: MAP OF TUSKEGEE, ALABAMA, BEFORE AND AFTER ACT 140[190]

(The entire area of the square comprised the City prior to Act 140. The irregular black-bordered figure within the square represents the post-enactment city.)

Justice O'Connor suggests that this example is extreme on immediate inspection. Yet, in terms of visual appearance alone, the twenty-eight-sided figure hardly looks more irregular than a number of the districts in Figures 2 and 3.[191] If the Tuskegee boundaries are extreme simply because of the way they look, the majority of congressional districts would be equally extreme.[192] What actually makes *Gomillion* easy and exceptional is that, in the context of Tuskegee, this particular pattern of line drawing had such a racially differential effect that it could only be a blatant example of a racist design to exclude black residents

190. The source of this map is Gomillion v. Lightfoot, 364 U.S. 339, 348 (1960).

191. To be sure, one projection sticks out incongruously from the side of the main body of the new boundaries. Yet even Wisconsin CD9 (Figure 2(d)), which appears by comparison to be fairly regular, has an appendage on the north side that sticks out some miles from the main portion of the district.

192. Two hundred thirty-nine of the 1990s congressional districts are less compact than the reconfigured Tuskegee district on both of the quantitative measures introduced below.

– Ex. 8884 –

from the political boundaries of the town.[193] Any intuition that the appearance of this twenty-eight-sided figure, standing alone, is an example of extreme manipulation of district appearance would be considerably misguided.

Thus, both abstract considerations of the different ways one can judge appearance and the current array of congressional districts argue for a more systematic, consistent way of comparing district appearances. Fortunately, in recent years, quantitative methods for assessing district appearance have been developed. The results are expressed in terms of a district's compactness. While measures of compactness are only now being introduced into redistricting procedures and their use is not yet settled, *Shaw* makes certain quantitative measures more meaningful and relevant than others.

B. *Three Quantitative Measures of Compactness*

Compactness has been part of the redistricting lexicon for over a century, but only recently has it been rigorously and quantitatively defined. Even with the development of appropriate, theoretical definitions, the technology for measuring compactness was not effectively available until the 1990s. The recent digitization of U.S. geography carried out by the U.S. Census Bureau has made it possible to apply the new quantitative approaches with considerable accuracy.[194]

Compactness can be measured along several dimensions and in different ways. In a systematic review of proposed conceptions of compactness, which one of the authors of this article led,[195] three distinct dimensions emerged as most relevant.[196] These dimensions are the traits we have described colloquially above: dispersion, perimeter, and population. We now provide more technical definitions of each and then employ the two of them to rank and analyze congressional districts throughout the country.

---

193. The Tuskegee case was so extreme because the effect was "to remove from the city all save only four or five of its 400 Negro voters while not removing a single white voter or resident." Gomillion v. Lightfoot, 364 U.S. 339, 341 (1960).

194. The cost of calculating district compactness scores does not seem to have stopped states and even some local jurisdictions from making them. The entire cost of redistricting has increased dramatically in recent years, but, given requirements for strict population equality, for example, the marginal additional burden of calculating district compactness should not be prohibitive.

195. Richard G. Niemi et al., *Measuring Compactness and the Role of a Compactness Standard in a Test for Partisan and Racial Gerrymandering*, 52 J. POL. 1155 (1990).

196. These characteristics also turn out to be the basis for most operationalizations of the term.

1. *Dispersion*

The term *dispersion* captures "how tightly packed or spread out the geography of a district is."[197] Underlying all dispersion measures is the notion that a perfect district is a regular, simple shape, usually a circle. Different quantitative measures exist because different ideal shapes can be taken as a starting point[198] and because there are multiple ways of measuring deviations from the ideal shape.[199]

During the 1990s round of districting litigation, one approach became common. This technique measures the ratio of the district area to the area of the minimum circumscribing circle.[200] Such a test is intuitively meaningful and has useful technical features. Operationally, it involves taking the areas of the district and of the smallest circle that completely encloses the district. The ratio of the former to the latter yields the dispersion compactness score.[201] Hence, a circular district is perfectly compact. A square district is relatively compact because, when one draws a circle around the district, there is little area inside the circle that is not also in the district. A long, narrow district, or one with "fingers" or other extensions, is less compact because it takes a large circle to enclose the entire district, yet much of that circle is empty.

We arranged the congressional districts in Figure 3 in descending order of dispersion, measured in this way. Districts do not come much more square than Michigan CD9. Minnesota CD7 is too rectangular to be perfectly compact, but it still ranks high. Maryland CD3 circles around Baltimore and includes no area west of the city, which lowers its compactness. Ohio CD19 is stretched out, relatively long and narrow, and is consequently even less compact. Florida CD3

197. Niemi et al., *supra* note 195, at 1160.

198. Some might suggest that hexagons provide a better base than circles because hexagons can fill an entire space, in principle, with no "in-between" area left over. Given the irregular shapes of states and other jurisdictions, however, it is unlikely that any real area could be divided into a set of perfect hexagons, even if equal population were not a consideration. Perfection in the real world of districting is impossible regardless of the theoretical standard one uses.

199. Because squares — which have equal length and width — are considered relatively compact, some have suggested that length and width should be the basis of quantitative measures. *See, e.g.*, Curtis C. Harris, Jr., *A Scientific Method of Districting*, 9 BEHAVIORAL SCI. 219, 221 (1964). The difficulty is that no unique method exists of measuring the length and width of irregular shapes. Length might well be the distance between the two points farthest apart in the district. Yet what is the width? How would one judge it in congressional districts such as those shown in Figures 2(f) or 3(c)?

200. Earnest C. Reock, Jr., originally defined this measure, Earnest C. Reock, Jr., Note, *Measuring Compactness as a Requirement of Legislative Reapportionment*, 5 MIDWEST J. POL. SCI. 70, 71 (1961), which Niemi and others catalogued as Dispersion 7. Niemi et al., *supra* note 195, at 1161.

201. In a practical sense, it is not always easy to measure areas of complex shapes, though computer programs are now available for this purpose.

essentially has no central core; not surprisingly, it has a very low compactness score. The extreme flagpolelike district discussed above, Florida CD22, has the lowest dispersion score of any district in the country.

Dispersion scores theoretically range from 1.0, which is perfectly compact — a circle — to 0.0 — a straight line. For the districts in Figures 3(a) to 3(f), the scores are .50, .40, .30, .20, .11, and .03, respectively. With an appropriate technical measure of how dispersed districts are, we are thus able to rank order congressional districts as well as to provide a more precise sense of the magnitude of the differences between the "appearance" of various congressional districts. This analysis can provide guidance to reapportionment bodies and discipline the judicial assessments *Shaw* now requires.

2. *Perimeter*

Instead of focusing on the dispersion of a district, we can examine the extent to which district borders wander in irregular ways. We do this through a perimeter measure; the most effective technical measure of perimeter relates length of the district perimeter to the area the district includes.[202] The intuitive justification for this measure is that a given perimeter length will enclose the most area if the shape it surrounds is a circle. Once again, then, a circle is the baseline against which districts are compared. A precise definition of the measure we use here is the ratio of the district area to the area of a circle with the same perimeter.[203]

---

202. Intuitively, one might think the most obvious measure of perimeter is overall perimeter length, measured in distance units, such as miles or kilometers. The Colorado State Constitution incorporates this approach for its state legislative districts. COLO. CONST. art. V, § 47. While easy to grasp, this measure has certain undesirable properties, especially when comparing congressional districts across the nation. First, because overall length is very sensitive to the absolute size of a district, one can only sensibly apply it to districting plans taken as a whole. That is, as noted above, it makes little sense to compare the overall lengths of the boundaries of rural and urban districts. *See supra* note 185. Rural districts, no matter how smooth and regular their borders, will register longer boundaries than urban ones, no matter how convoluted the boundaries of the latter.

Comparing alternative districting plans on the basis of the overall boundary lengths for all the districts in the state does make sense. Nevertheless, given regional variations between urban and rural areas, one cannot reasonably compare individual districts, even within one state. In addition, comparisons of aggregate boundary lengths across states are inappropriate because the shapes of the states will greatly affect such measurements. For these reasons, we do not use this measure here.

203. In equation form, this definition is expressed as $4\pi A/P^2$, where A is the area and P is the perimeter of the district. One can easily confirm that a circle has a perimeter score of 1, as follows. If the perimeter of a circle is P, by definition, $P = 2\pi r$, where r is the radius of the circle. In addition, A, the area of the circle, is πr^2. Then, perimeter score $= 4\pi(\pi r^2)/(2\pi r)^2 = 1$. This measure is called the Schwartzberg measure in Daniel D. Polsby & Robert D. Popper, *The Third Criterion: Compactness as a Procedural Safeguard Against Partisan Gerrymandering*, 9 YALE L. & POLY. REV. 301, 348-49 (1991). In fact, as Polsby and Popper point out, it is a slight

In general, districts that have smooth borders and relatively regular shapes will have shorter boundaries and enclose considerable area given the boundary length. They therefore score high on this perimeter measure. Convoluted district borders substantially lengthen the boundary without enclosing more area and hence score low.

We arranged the congressional districts in Figure 2 in descending order of perimeter scores. Michigan CD7 has nearly straight borders and is relatively square-shaped. Mississippi CD5 is regularly shaped and has mostly smooth borders, except along the Mississippi River and Gulf Coast.[204] California CD22 has a stair-step border on the northeast. This feature, in addition to the coastline and two small islands, lowers its perimeter score, but the district remains sufficiently regular for its score to fall in the middle of the district scores shown. Wisconsin CD9, Texas CD14, and North Carolina CD7 have increasing boundary twists and turns, and they therefore score progressively lower. Finally, the border of Texas CD18 is extraordinarily long for the area it encloses as a result of the many narrow corridors, wings, or fingers that reach out to enclose black voters, while excluding nearby Hispanic residents.

Perimeter scores, like dispersion scores, theoretically range from 1.0 to 0.0. The perimeter scores for the districts in Figures 2(a) to 2(g) are .50, .40, .30, .21, .10, .05, and .01, respectively. Using this measure, we can rank all congressional districts in terms of the regularity of their borders, as well as suggest the magnitude of differences between districts. If courts applying *Shaw* focus on district perimeter, this quantitative approach can yield a far more systematic and clear set of norms than intuitive judicial assessments.

3. *Population*

A third focal point for concerns of district "appearance" is sometimes taken to be the way in which a district distributes voters. We can translate this concern into a population measure, which focuses not on shape alone, but on the distribution of population between a district and its surrounding territory. Developing a quantitative measure requires some way of comparing the district's population with the "nearby" excluded population. Commentators have suggested two

variation (and improvement) of the measure originally proposed by Schwartzberg. *Id.* at 349 n.204; *see also* Joseph E. Schwartzberg, *Reapportionment, Gerrymanders and the Notion of "Compactness,"* 50 MINN. L. REV. 443 (1966).

204. These observations illustrate the point that natural features will affect compactness scores — dispersion as well as perimeter. The effects of natural features are a reason that one cannot use such scores in a mechanical fashion to eliminate districts that fall below some predetermined level. For more discussion, see *infra* text accompanying notes 231-32.

similar measures; both are ratios in which the numerator is the district's population.[205] In the most common measure, the denominator is the population in what is called the "rubber-band" area around the district — the area that would be inside a rubber band stretched tightly around the district.[206] In the alternative measure, the denominator is the population in the minimum circumscribing circle — it excludes populations that would fall outside the state. Both measures vary from 1.0 to 0.0.[207] For reasons we describe in Section III.C, population measures do not seem to reflect the concerns *Shaw* expresses. Thus, we do not provide quantitative assessments of the districts in Figures 2 and 3 in terms of population measures.

C. *The Relevant Measures Under Shaw*

Of the three potentially relevant measures of compactness — dispersion, perimeter, and population — the first two best capture the concerns *Shaw* expresses. Although the decision offers little in the way of specific criteria for judging "bizarre" appearances, it invokes many synonyms for widely dispersed districts and for those whose borders are severely distorted. Indicating concern for perimeter manipulation, *Shaw* refers to *Gomillion* as employing "a tortured municipal boundary line,"[208] and *Shaw* similarly takes note of the way in which North Carolina CD12 "winds in snake-like fashion" through various areas.[209]

At the same time, *Shaw* also refers to the concentration of a "dispersed" minority population and to individuals "widely separated by geographical and political boundaries."[210] In describing District 12, the Court notes that it is "approximately 160 miles long and, for much of its length, no wider than the I-85 corridor."[211] These comments refer not to twists and turns of district boundaries, but to how spread out the district is, both geographically and with respect to the types of areas — rural versus urban, farming versus manufacturing — it encompasses. Similarly, the proposed state senate district, about which

205. Niemi et al., *supra* note 195, at 1162 tbl. 1.

206. In technical terms, this measure is described as the minimum convex figure that completely contains the district.

207. For the "rubber-band" definition, a perfect district would be one in which the border had only "convex" angles — that is, a rubber band stretched around it would have no areas that are outside the district but inside the rubber band. For the alternative definition, a circle would receive a score of 1.0.

– Ex. 8889 –

the Court intimated doubts in *Growe v. Emison,*[212] has a relatively smooth, but elongated, border.[213] These comments point to concerns about a district's dispersion.

For these reasons, we believe that if courts and reapportionment bodies look to quantitative approaches to implement *Shaw,* the dispersion and perimeter measures are the most appropriate. Population measures do capture certain manifestations of partisan or racial gerrymandering, but they do not measure "shape" in the usual sense and therefore do not necessarily reflect the problems *Shaw* identifies.[214] In our quantitative assessment of congressional districts throughout the country, we will therefore rely on only the dispersion and perimeter measures.

In interpreting the results that follow in Part IV, one must keep in mind at least three complexities, to which we have alluded above.[215] First, compactness, as quantified, varies on a continuum from zero to one. The point when the compact becomes the noncompact requires judgments about social perceptions that *Shaw* barely begins to articulate.[216]

Second, although both dispersion and perimeter appear relevant under *Shaw,* they measure different dimensions. Recall the contrast between the tight core and wandering boundaries of Texas CD18 (Figure 2(g)) and the highly dispersed, but smooth bordered, Florida CD22 (Figure 3(f)).[217] Different quantitative measures will not al-

212. 113 S. Ct. 1075 (1993); *see supra* notes 157-58 and accompanying text.

213. 113 S. Ct. at 1085.

214. Having for the first time been able to calculate and assess fully a population measure, we are able to see that it measures, in part, the type of population the districts include and exclude, and not simply the degree to which the districts retain nearby populations. In particular, largely rural or suburban districts may tend to circle around an urban area rather than incorporate a portion of the city itself. This pattern often leaves a large population in the "rubber-band" or circle area, lowering the population score. Favoring higher scores would thus give preference to districts that mixed urban and suburban or rural areas. For example, Colorado CD4, near Denver, and Ohio CD13, near Cleveland, are outlying districts that have relatively low scores on the population measure because they abut large urban areas. A largely rural or suburban district that circles around an urban area also lowers the dispersion measure. The effect, however, is especially strong for population measures; the excluded land area may not be great, but the excluded population will often be large. For these reasons, we will refrain from further use of population measures.

215. *See supra* text accompanying notes 177-80.

216. Lest this statement seem to render the concept meaningless, consider the analogy of outdoor temperature. There is no bright line dividing hot from warm or warm from cold. Although there are some meaningful points on the temperature scale, such as the point at which water freezes, those points do not provide an objective division between hot and cold. Temperature is relative. Yet we all make use of temperature information daily.

217. Can one simply combine dispersion and perimeter scores by averaging them? The problem with averaging the two scores is that it can mask situations in which one score is high and the other low. In principle, one might have a district with a dispersion score of .80 and a perimeter score of .02. The average — .41 — appears fairly reasonable; indeed, it is greater than the

– Ex. 8890 –

ways rank individual districts, and even districting plans, in identical order.[218] For many districts, the two measures will yield similar results, but, when they conflict, questions will remain as to which measure, or what combination of the two measures, should be the focus.

Third, one must take care in comparing compactness scores across states and between different types of jurisdictions. The more compact a state as a whole, the more one might expect its individual districts to be compact.[219] Similarly, as a general rule, we might expect state legislative and local districts to be more compact than congressional districts.[220] Contextual differences of these sorts must be considered before drawing ultimate conclusions concerning comparisons across districts. At the same time, *Shaw* seems to discuss district appearance in absolute terms or as a generic concept; before requiring strict scrutiny for District 12, the Court did not compare it to other congressional districts in North Carolina or anywhere else. With the quantitative measures defined and these caveats in mind, Part IV analyzes the compactness of congressional districts throughout the country.

IV. The Compactness of Congressional Districts in the 1980s and 1990s

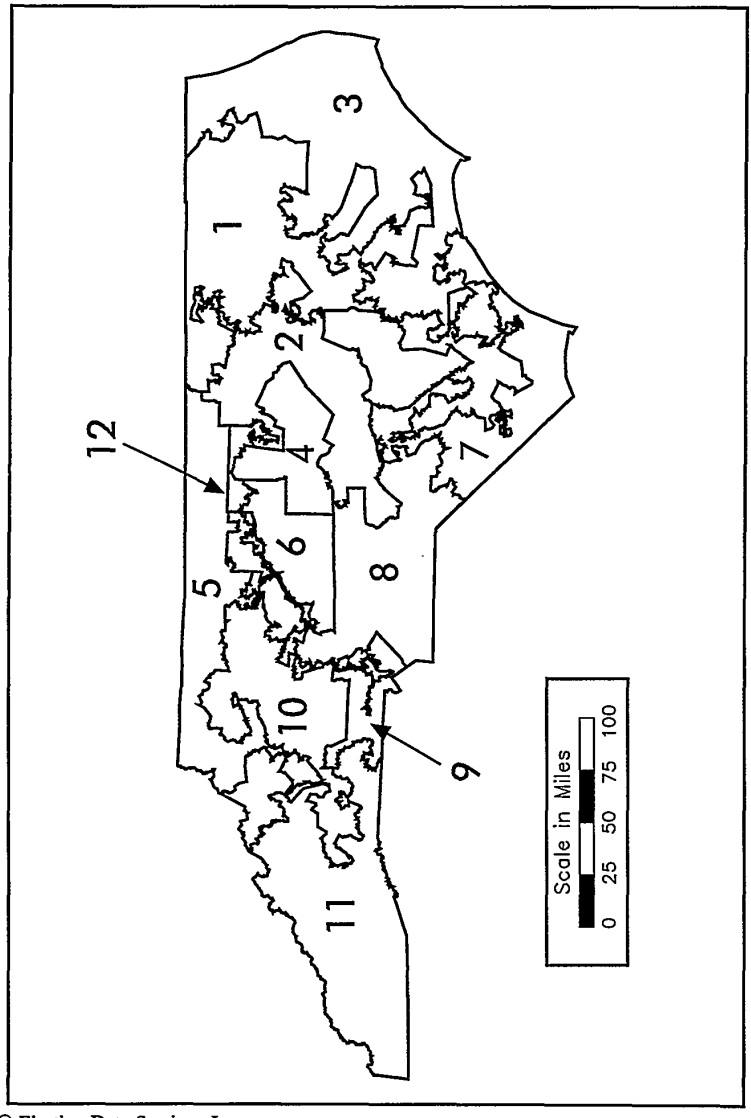
In this Part, we apply our quantitative methods to answer three questions that *Shaw* raises. First, we compare North Carolina District 12 to other districts in the state to determine the extent to which

mean score for the congressional districts in many states. Nevertheless, it hides the extremely low perimeter score. Such extreme situations are not likely to occur in practice, but the data we present below, *see infra* Table 3, reveal a number of situations in which the average does not convey an extremely low score on one — usually the perimeter — measure. See *supra* text accompanying note 186 for the discussion of Texas CD18.

218. Niemi et al., *supra* note 195, at 1167-76, demonstrate this point with respect to entire plans.

219. Note that some states with water boundaries define the perimeters of the district as extending into the water — for example, a relatively straight line in the middle of a river dividing two states. Consequently, one cannot always equate the apparent shape of the state with the compactness levels possible.

220. Federal constitutional requirements of one person, one vote are more stringent for congressional districts. For state legislative districts, the Court has declared population deviations of up to 10% to be presumptively valid and has upheld deviations up to 16.4% while noting that the latter "approach tolerable limits." Brown v. Thompson, 462 U.S. 835, 842 (1983); Mahan v. Howell, 410 U.S. 315, 319, 329 (1973). In contrast, the standard for a congressional district remains that the district be "as mathematically equal as reasonably possible." White v. Weiser, 412 U.S. 783, 790 (1973); *see also* Karcher v. Daggett, 462 U.S. 725 (1983) (finding unconstitutional for congressional districts an average deviation from absolutely perfect equipopulation of 0.1384% when the maximum deviation of any one district was only 0.6984%.). The stricter the requirement of population equality, the more districts are likely to deviate from compactness. Note, though, that some state constitutions require nearly absolute equality of state legislative districts.



District 12 is aberrational. Second, we examine post-1990 congressional districts throughout the country to determine which districts, and how many, have dispersion or perimeter scores comparable to District 12. Specifically, we determine how many African-American-dominated, Hispanic-dominated, and white-dominated districts have shapes that appear, at least initially, to be as irregular as District 12. As a related point, we also show how many congressional districts would be affected if courts translated *Shaw* into an absolute requirement that districts not exceed some specific measure of compactness. Finally, we compare the shape of congressional districts in the 1990s with those in the 1980s to determine whether districts have become less compact in recent years. If they have not, *Shaw* would constitute a sudden change in the legal rules governing districting. If they have, *Shaw* would not change the rules in the middle of the game, but rather would be a response to the changed context of districting.

A. *North Carolina District 12 in the Context of the 1990 North Carolina Redistricting Plan*

After the Justice Department's denial of preclearance for its first effort at redistricting, the North Carolina General Assembly eventually designed the twelve-seat congressional districting plan that took effect in time for the 1992 congressional elections. As a map of this plan shows,[221] it included several districts, in addition to CD12, that many observers might consider irregularly shaped.

221. *See infra* Figure 5.

FIGURE 5: NORTH CAROLINA 1990 CONGRESSIONAL DISTRICTS

© Election Data Services, Inc.

Note: The shaded districts, Districts 1 and 12, are minority-dominated ones. In the 1992 congressional elections, District 1 elected Eva Clayton and District 12 elected Melvin Watt, North Carolina's first two black congressional representatives since Reconstruction.

Several facts immediately stand out. First, in a certain obvious sense, District 12 is unlike any other district in that it wanders through the middle of the state as a long, thin line. On the other hand, it might be less distinct than many readers would expect. *Shaw* emphasizes the extreme length of District 12, but the northwestern-most district, District 5, covers more miles east to west and a similar number of miles north to south. Indeed, many readers may be surprised by how many districts in North Carolina fall considerably short of being square or rectangular. We wonder whether even two districts satisfy many readers' intuitive view of how districts should be drawn. In general, this map confirms the fact that district shapes vary along a continuum and that separating them through an eyeball assessment is extremely difficult. Is District 1, 2, 3, 7, or 10 considerably more compact than District 12? How can one meaningfully compare the appearance of these other districts with District 12 and with each other?

In Table 2, we provide the dispersion and perimeter scores for the 1990s North Carolina congressional districts:

TABLE 2
COMPACTNESS OF NORTH CAROLINA CONGRESSIONAL DISTRICTS IN 1990s[222]

District	Compactness Measure	
	Dispersion	Perimeter
1	.25	.03
2	.25	.06
3	.35	.06
4	.40	.32
5	.14	.08
6	.44	.09
7	.29	.05
8	.33	.17
9	.28	.07
10	.30	.06
11	.29	.14
12	.05	.01
Mean	.28	.095
Standard Deviation	.10	.08

With these quantitative assessments, we can reach one confident conclusion. District 12 is certainly the least compact of North Carolina's districts; measured either in terms of dispersion or perimeter, District 12 ranks lowest in the state. Whether it is so unique as to be consid-

222. Information provided by Election Data Services, Inc.

ered an aberration, however, becomes a matter of judgment. In terms of the dispersion measure, District 12 falls far below any other district,[223] even when compared to its nearest competitor, District 5. Along this dimension, most other districts are considerably more compact. This comparison means that District 12 has less of a central core than all other districts or, conversely, that it is relatively longer and narrower than other districts. It incorporates a significantly more geographically dispersed population. With respect to district perimeters, however, District 12 is far less unusual. While it remains the least compact when judged this way, the perimeter scores for nine of the twelve districts are less than 0.10. These scores are quite low compared to districts throughout the country.[224] Indeed, almost all the districts in North Carolina have perimeters that could be classified as quite, if not extremely, irregular.[225] To observers who focus on CD12 in isolation, this result might come as a surprise. It might also raise questions as to whether the "appearance" of any congressional district ought to be evaluated on its own or only in the context of the other districts in the same redistricting plan. Perhaps irregular minority districts are, or should be, less troubling when contained within a redistricting plan that employs similarly contorted majority-dominated districts.[226] In *Shaw,* the Court's first entry into this arena, however, the Court assessed CD12 in isolation from other districts in the same plan.

B. *The Compactness of 1990s Congressional Districts Throughout the Country*

With the quantitative measure we have described above and recently developed technology, we are able to rank congressional dis-

223. Just as there is no bright line between compact and noncompact districts, there is no one number that determines whether the difference between compactness scores is significant. Clearly, a small difference — for example, .01 — is not meaningful, and certainly the larger the difference, the more likely it is that the scores are meaningfully different. A given difference has to be evaluated at least in the context of: (a) whether the difference is due to geographical or other obvious factors — for example, a case in which adjoining districts are "reoriented" so that the common border is now along a meandering river, or a case in which one district follows noncompact subjurisdiction boundaries while another is made compact by crossing those boundaries; (b) the size of the difference in both dispersion and perimeter score — it can even happen that differences in dispersion and perimeter scores are contradictory; and (c) whether the comparison is of the average scores for entire plans or of the scores of specific districts — a plan average may be based on scores of a large number of districts, so even if a few districts in the plan are made substantially more (or less) compact, the average across all districts may not change much.

224. Nationwide, 13% of congressional districts have perimeter scores below 0.10. *See infra* Table 3.

225. Note that only Districts 1 and 12 are majority-minority districts.

226. *See supra* text accompanying note 165.

tricts throughout the country in terms of their dispersion and perimeter.[227] In Table 3, we provide an abbreviated version of this information by listing the congressional districts whose dispersion or perimeter score (or both) is relatively low. In choosing the cutoff points used in Table 3, we do not imply that all districts below those points, or only those districts, are vulnerable after *Shaw.* Later in this section, in Table 4, we show how many districts, majority and minority, are affected when a range of different cutoff levels are used to define "low" dispersion and perimeter scores.[228] The cutoff points in Table 3 are somewhat arbitrary,[229] and on each dimension they are higher than the scores of North Carolina District 12. Nonetheless, because they identify the districts that are objectively least compact, these are the most important tables we present for the purpose of *Shaw*'s future application.

227. We have also ranked them in terms of the population measure, but for reasons discussed above, *see supra* text accompanying notes 208-14, we do not provide that information here.

228. *See infra* Table 4.

229. A historical comparison may be of interest: as suggested above, the "uncouth twenty-eight-sided" figure in *Gomillion* is not particularly noncompact by the standards of the 1990s. *See supra* notes 190-91 and accompanying text. We estimate its dispersion score to be in the neighborhood of .41, and its perimeter score to be approximately .34. The dispersion score puts the district above the average 1990s congressional districts in all but seven states; the perimeter score is above the average in all but eight states.

TABLE 3
1990s CONGRESSIONAL DISTRICTS WITH LOW DISPERSION OR PERIMETER COMPACTNESS SCORES[230]

District	Dispersion Score	Perimeter Score	Largest Population Group	
CA36	.04	.10	White	69%
FL3	.11	.01	Black	55
FL17	.08	.06	Black	56
FL18	.14	.03	Hispanic	67
FL22	.03	.05	White	83
HI2	.05	.11	Asian	53
IL4	.19	.03	Hispanic	65
LA4	.13	.01	Black	66
LA6	.29	.05	White	82
MA3	.14	.11	White	78
MA10	.15	.06	White	94
NJ13	.11	.07	White	42*
NY5	.19	.05	White	79
NY7	.22	.05	White	58
NY8	.06	.03	White	74
NY9	.27	.04	White	82
NY12	.12	.02	Hispanic	58
NC1	.25	.03	Black	57
NC5	.14	.08	White	83
NC7	.29	.05	White	70
NC12	.05	.01	Black	56
TN4	.12	.08	White	95
TX3	.29	.05	White	86
TX6	.21	.02	White	88
TX18	.36	.01	Black	50
TX25	.20	.02	White	53
TX29	.19	.01	Hispanic	61
TX30	.24	.02	Black	49*

Note: Districts shown here are all those with a dispersion score of ≤ 0.15 or a perimeter score of ≤ 0.05. For the purpose of this table, "White" means non-Hispanic white; "Black" means non-Hispanic black; and "Asian" means Asian or Pacific Islander. "Hispanics" may be of any race, and "population" refers to total population.

* Please also note that blacks and Hispanics constitute a majority in NJ13 and TX30.

One must make comparisons carefully because of the effects of state shapes.[231] Twenty-eight congressional districts fall below the

230. Information provided by Election Data Services, Inc.

231. One of the authors previously wrote that we should "almost always" limit comparisons to one state or jurisdiction. Niemi et al., *supra* note 195, at 1176. Professor Niemi now regards nationwide comparisons as more useful than that statement would suggest, as long as one makes them with sensitivity to the shapes of states and to other complicating factors such as islands and coast or shorelines.

compactness levels we have selected. In two cases, however, the low scores are clearly artifacts of their unusual geography; they can be quickly dismissed because geography, not legislative politics, immediately accounts for their apparently low compactness. Hawaii CD2 is composed of islands, and California CD36 includes two islands as well as part of the coast in the greater Los Angeles area.[232]

With respect to the remaining districts, one result is immediately striking. If we rather crudely consider dispersion and perimeter simultaneously, by simply adding the two scores, North Carolina CD12 turns out to be the worst district in the nation. In this specific sense, this district is truly exceptional. Thus, if a district must be at least as "bizarre" as District 12 to trigger strict scrutiny, and if bizarreness is measured by adding dispersion and perimeter scores, District 12 stands alone. This result is potentially of considerable significance: if *Shaw* is applied by adding the quantitative and perimeter measures used here, no other current congressional district is as extreme as that in *Shaw*.

At the same time, District 12 is not a statistical outlier under this combined approach, for other districts are not far behind. New York CD8 and Florida CD22 are nearly at the level of North Carolina CD12 on both measures, followed closely by Florida CD3 and CD17, Louisiana CD4, New York CD12, and then by Florida CD18 and New Jersey CD13.

While combining the two measures in this way is revealing, it poses several theoretical and conceptual problems. Most significantly, *Shaw* provides no guidance as to whether a district should be considered "highly irregular" if it is extreme on either dimension — dispersion or perimeter — alone or only when these two dimensions are combined. This point is especially relevant for districts like the previously discussed Texas CD18, which is not spread over a large area but does have a very irregular border.[233]

If we focus on dispersion scores alone, North Carolina CD12 turns out to be the second worst in the nation,[234] with the long, narrow district we described earlier, Florida CD22, at the bottom.[235] Other

232. In both cases, the islands are well spread out, thus greatly lowering the dispersion score. The perimeter score is also reduced because the perimeter is calculated around each island — as well as mainland area — separately.

233. If one averages the dispersion and perimeter scores for Texas CD18 (Figure 2(g)), the resulting score is .185, which does not place it among the 25 least compact congressional districts in the nation.

234. We leave aside the cases of California CD36 and Hawaii CD2 because they are artifacts of the unusual geography of the two states.

235. Political observers describe this oddly shaped district as a result of the way in which the Voting Rights Act was interpreted in Florida. The beach towns were apparently isolated when

districts, however, follow close behind. If *Shaw* requires that CD12 be deemed noncompact, the question of how to treat districts that are similarly, but not quite as badly, dispersed — such as New York CD8 (majority white) or Florida CD17 (majority black) — remains open.

If we focus on perimeter irregularities alone, North Carolina CD12 remains extreme, but several other districts are equally extreme. Even more clearly than with dispersion, compactness falls along a continuum when we focus on the shape of boundary lines. Distinguishing the "unusual" from the "highly irregular" or "bizarre" inevitably requires seemingly arbitrary cutoffs.

Note that over half the districts in Table 3 are majority white. In part, this distribution occurs because majority-white districts that border on irregular minority-majority districts necessarily incorporate those irregularities into their own boundaries.[236] In absolute terms, a greater number of extremely noncompact districts — as defined in Table 3 — are white-controlled districts. In relative terms, however, minority districts would currently suffer more from any rule that barred districts with scores below the levels of dispersion and perimeter in Table 3. The fifteen majority-white districts listed constitute only four percent of the 370 majority-white districts in the country. But the six majority-black districts are nineteen percent of the thirty-one majority-black districts nationwide, and the four majority-Hispanic districts are twenty percent of the country's twenty majority-Hispanic districts.[237] In addition, given our earlier analysis,[238] *Shaw* might have little or no effect on any of the extremely irregular white-dominated districts.

Table 3 further reveals that a few states have the most at stake in the way *Shaw* is applied. More than three-quarters of the districts in Table 3 are concentrated in only five states: Florida, Louisiana, New York, North Carolina, and Texas. In at least some of these states, *Shaw* has already influenced litigation.[239] That so many irregular dis-

---

the adjoining 23d and 17th districts, just inland from the coast, were designed as minority-dominated districts. From this perspective, the oddly shaped coastal district is the residue of an effort to create minority-dominated districts. *See generally* BARONE & UJIFUSA, *supra* note 186, at 320-21 (describing Florida CD22 and the redistricting process).

236. In addition to Florida CD22, Louisiana CD6, New York CDs 5, 7-9, and North Carolina CD7 are each majority-white districts that share parts of borders with a minority district.

237. All these figures exclude districts in which no one racial or ethnic group is a majority. The exact numbers, but not the conclusion, would change if we counted those districts. STANLEY & NIEMI, *supra* note 184, at 43-44 tbl. 1-17, lists congressional districts with a majority-minority population, based in part on Election Data Services data.

238. *See supra* text accompanying notes 181-220.

239. *See, e.g.*, League of United Am. Citizens v. Clements, 999 F.2d 831 (5th Cir. 1993) (en

tricts are concentrated in a few states will exacerbate the problem of choosing the relevant baseline for assessing districts. As noted earlier, judges might evaluate an individual district against the mean compactness scores of other districts in that state. Alternatively, judges might examine an individual district in isolation or, perhaps more meaningfully, by comparing it to the kind of nationwide districting standards we make available in this article.

As noted, the cutoffs in Table 3 are somewhat arbitrary. In Table 4, we shift these threshold levels, while keeping them at the low end of the spectrum, and show how many minority and majority districts are affected as the "appearance" threshold changes.

TABLE 4
NUMBER OF 1990S CONGRESSIONAL DISTRICTS FALLING BELOW VARIOUS LEVELS OF COMPACTNESS[240]

	Dispersion Score			Perimeter Score		
	≤.15	.16-.20	.21-.24	≤.05	.06-.08	.09-.12
Number of Districts	15	25	27	20	30	31
Number of Minority Districts*	07	11	05	10	10	05
Cumulative Number of Districts	15	40	67	20	50	81
Cumulative Number of Minority Districts	07	18	23	10	20	25
Number of Districts with Dispersion Score ≤.24 and Perimeter Score ≤.12			41			
Number of Minority Districts with Dispersion Score ≤.24 and Perimeter Score ≤.12			17			

* Districts with combined black and Hispanic populations of more than 50%

The results further illustrate our argument that congressional districts lie along a compactness continuum. As cutoff levels are raised, even by small amounts, more and more districts fall below them. The levels in Table 4 also give a more concrete idea of the degree of compactness of districts at the low end of the spectrum. For example, one out of every twenty congressional districts currently in use has a perimeter score no higher than that of North Carolina CD7 (Figure 2(f)), and

banc); Hines v. Mayor of Ahaskie, 998 F.2d 1266 (4th Cir. 1993); Kimble v. County of Niagara, 826 F. Supp. 664 (W.D.N.Y. 1993).

240. Information provided by Election Data Services, Inc.

more than one in ten has a score less than that of Texas CD14 (Figure 2(e)).

The number of minority districts below various cutoffs goes up more slowly. Nonetheless, the results in Table 4 show in stark fashion the tension between the goals of more minority districts and high levels of compactness, at least as congressional districts were drawn before *Shaw.* If courts were to define "highly irregular" as districts that violated the strictest standards of both dispersion and perimeter that Table 4 uses, seventeen of the current fifty-one single-minority districts in the country would be subject to strict scrutiny.

C. *Compactness of Congressional Districts over Time*

In response to *Shaw,* some might argue that the Court's sudden concern with district appearances arose only when states began to use unusual boundaries to create minority-dominated districts. Those who take this view necessarily assume that districts have always been as contorted as they are presently. If this premise is right, *Shaw* might be taken to reveal a cynical or even invidious concern with district shapes only when they benefit minorities.

To test this premise, we compared the compactness of congressional districts in the 1980s and the 1990s.[241] We first focus on North Carolina, which had eleven districts in the 1980s. Table 2 contains the dispersion and perimeter scores for the 1990s districts;[242] Table 5, below, provides these scores for the 1980s districts.

241. As noted earlier, the ability to calculate compactness scores has been developed only recently. *See supra* text accompanying note 194.

242. *See supra* Table 2.

TABLE 5
COMPACTNESS OF NORTH CAROLINA CONGRESSIONAL DISTRICTS IN 1980S[243]

District	Compactness Measure	
	Dispersion	Perimeter
1	.57	.46
2	.34	.27
3	.39	.27
4	.26	.26
5	.30	.29
6	.36	.33
7	.36	.28
8	.34	.28
9	.30	.22
10	.38	.27
11	.36	.42
Mean	.36	.30
Standard Deviation	.08	.07

As these tables reveal, districts became significantly less compact, at least in North Carolina, after the 1990 round of redistricting. In terms of dispersion, all but one district had a score of .30 or above in the 1980s while, today, only five of the twelve districts are that compact. The perimeter measure, however, reveals even more striking results. Every current district, with the exception of CD4, has a considerably more distorted perimeter than the *worst* North Carolina district in the 1980s. Average perimeter compactness has plummeted. Although most North Carolina districts are still built around a core area — though less so than in the 1980s — they meander in and around that area to a far greater extent than previously. Compared to the 1980s districts, especially on the perimeter measure, almost all the current districts are significantly more irregularly designed.

For the most part, the pattern in North Carolina turns out to be a general one. Table 6 provides a state-by-state comparison of district compactness, measured in terms of dispersion and perimeter, for the 1980s and for the 1990s. We also show the numbers of districts falling below various levels of compactness.

Note: States with only one congressional representative are excluded. Slightly higher thresholds are used here than in Table 3 to show the large number of quite, if not extremely, low scores in the two decades.

The nationwide figures make it clear, of course, that low compactness is not an invention of the 1990s. A few districts in the 1980s were extremely noncompact, nearly as much so as the least compact districts of the 1990s. In addition, a few states had significantly less compact districts in the 1980s than in the 1990s. California is the prime example. Under the Burton districting plan, considered one of the most notoriously partisan gerrymanders in recent years, several extremely contorted districts were created, making overall compactness scores lower than in the 1970s[245] and lower than those in most other states.

In general, however, there is no denying that the present congressional districts are less compact than those they replaced.[246] Between

245. *See* Niemi et al., *supra* note 195, at 1175.

246. That extremely noncompact districts are not evident, in general, in the 1970s and 1980s does not, of course, mean they were not prevalent in earlier periods. Southern Redeemers used gerrymanders, involving extremely noncompact election districts, as a central technique to reestablish political control after the national retreat from Reconstruction began in 1877. Thus, in Mississippi, Redeemers in 1877 concentrated "the bulk of the black population in a 'shoestring' Congressional district running the length of the Mississippi River, leaving five others with white majorities. Alabama parceled out portions of its black belt into six separate districts to dilute the black vote." ERIC FONER, RECONSTRUCTION: AMERICA'S UNFINISHED REVOLUTION, 1863-

the 1980s and 1990s, average compactness levels dropped, precipitously in the case of district perimeters. More importantly, at extremely low levels of compactness, the number of districts increased sharply. Overall, the number of districts with very low scores rose substantially, with the decline in perimeter scores the most noticeable. Nationwide, the number of districts with scores at or below .08 more than tripled, as seen in Table 6.

State-by-state comparisons indicate that the number of states in which average compactness declined is greater than the number in which average compactness increased (by a margin of thirty-two to nine for perimeter scores). However, the results in Table 6 also reveal that low compactness is particularly prominent in a small number of states. The chronological comparison in those states indicates the depth of the change the 1990s districting created. In Florida, Louisiana, North Carolina, and Texas, only one district in the 1980s was below the dispersion or perimeter cutoffs shown in Table 6. In these same states in the 1990s, sixteen districts fall below the dispersion cutoff, and twenty-seven fall below the perimeter cutoff.

Three factors best explain this dramatic decline. First, since *Karcher v. Daggett*,[247] congressional districts must have virtually identical populations.[248] In pursuit of the mathematic exactitude the Court has demanded, jurisdictions necessarily have had to compromise other values, like compactness. This is a trade-off legal doctrine itself has imposed on political bodies. Second, the increasing sophistication of redistricting technology enables constant manipulation and recalibration of district boundaries to achieve that equalization, or other goals. The new computer programs facilitate twists and turns in perimeters that add or subtract small numbers of people until some desired level of equality is achieved — or until more partisan and personal agendas are realized. Third, the interpretation of the VRA in *Thornburg v. Gingles*[249] has played a major role. *Gingles* had the ef-

1877, at 590 (1988). In South Carolina, Democrats constructed the "bizarre" South Carolina Seventh District in 1885, which "contained the homes of two Republican incumbents and sliced across county lines in order to pack in every possible black voter." Kousser, *The Voting Rights Act, supra* note 21, at 144. After these gerrymanders, the Seventh District in South Carolina was 81.7% black and the Sixth District in Mississippi was 77.5% black. *Id.* at 148. (There are small discrepancies between Foner's and Kousser's figures regarding the postgerrymander populations in the Mississippi congressional districts.).

247. 462 U.S. 725 (1983).

248. In 1983, the Court upheld the invalidation of a New Jersey districting plan in which the maximum deviation from exact equality was 0.6984%. The Court based its holding on the existence of a plan with a smaller deviation and the fact that the state had not justified its adoption of a less accurate plan. *Karcher*, 462 U.S. at 725.

249. 478 U.S. 30 (1986).

– Ex. 8906 –

fect of requiring jurisdictions to put greater emphasis on fair and effective representation of minority interests. Because the emphasis on interest representation often conflicts with the traditional role of geography in constructing districts — particularly when minority populations are dispersed — *Gingles* has led to further deviations from compactness. These explanations are consistent with the greater decline in perimeter measures compared to dispersion measures and with the strong correlation between states with large minority populations and those whose perimeter scores declined in the 1990s.[250]

Whether rightly or wrongly decided, *Shaw* therefore cannot be seen as the Court's sudden awakening to a phenomenon of long-standing existence. Contorted appearances are not a new invention, but shifts in legal doctrine and technological developments have combined to produce generally less compact congressional districts and a number of extremely noncompact individual districts. In this sense, *Shaw* should be seen as an outgrowth of the changes occurring in the 1980s, including those the Court itself set into motion through changes in legal doctrine.

V. Thresholds Versus Justifications: The Legal Role of Compactness

District "appearance" is a threshold, not an ultimate, issue under *Shaw.* It is important to be clear about the precise way in which *Shaw* makes compactness relevant. "Bizarre" districts that appear to be drawn for racial reasons are not per se unconstitutional. Instead, jurisdictions must offer specific, legitimate, and compelling purposes that account for the location and design of these districts. Under *Shaw,* noncompactness functions as a trigger for strict scrutiny; once a district crosses a threshold of noncompactness, special burdens of justification apply. Nonetheless, even extremely noncompact districts can survive strict scrutiny if sufficiently justified.

The process of justification involves two steps. First, the odd shape of a district must result from a state's pursuit of aims that are legitimate and constitutionally compelling. Second, the means the state chooses must be narrowly tailored to achieving those legitimate aims and no others. The issue of justification, therefore, is as crucial as that of appearance. *Shaw,* however, touches on that issue only briefly. In this last section, we can sketch a few considerations relevant to the justification inquiry.

250. Of the states with combined black and Hispanic populations above 20%, between 10% and 20%, and less than 10%, 13 of 15 (87%), 7 of 9 (78%), and 12 of 19 (63%), respectively, saw a decline in their perimeter scores.

Potentially acceptable justifications can be divided into three types: those that are obviously legitimate; those that pose more difficult questions; and those that trace directly to the VRA. With respect to each, we both describe the general form of justification and suggest some of the difficulties courts will face in applying it. We then turn to the more pervasive and general problem posed by *Shaw*'s demand that intensely political and partisan districting decisions be justified in terms of rational, articulable principles. This conflict between the political and the legal poses daunting obstacles to judicial application of *Shaw*.

A. *Justifications: Ends*

1. *Conventionally Sufficient Ends*

Certain traditional districting ends are, in theory, precisely the kind that will provide sufficient justification under *Shaw* for even "highly irregular" districts. They include respecting existing political boundary lines when they are oddly shaped, following natural geographic features of a landscape, and preserving "communities of interest." At the least, when a court finds these ends to be the dominant purpose behind a district's design, *Shaw* ought to be satisfied.[251] For mixed-motive cases, however, in which these purposes are present alongside race-conscious districting aims, *Shaw* provides no direct guidance. With respect to "highly irregular" minority districts, these cases are likely to be common. Whether in such situations the enhancement of minority representation must be a motivating factor, the dominant motivating factor, or the exclusive motivating factor remains an open question.

Even after courts determine the appropriate causation standard, the evidentiary and administrative difficulties they will face in seeking to untangle mixed motives will remain formidable. The underlying purposes and principles that animate *Shaw* should govern the choice of standard. If we are right that *Shaw* fundamentally concerns social perceptions that race has subordinated all other traditionally relevant values in redistricting — but that race-conscious districting is not per se a constitutional problem — the proper causation standard in mixed-motive contexts ought to track this concern. This interpretation might suggest that the enhancement of minority representation must be more than merely a motivating factor behind a "highly irregular" district; it

251. *See, e.g.*, Shaw v. Reno, 113 S. Ct. 2816 (1993) ("[W]hen members of a racial group live together in one community, a reapportionment plan that concentrates members of the group in one district and excludes them from others may reflect wholly legitimate purposes. The district lines may be drawn, for example, to provide for compact districts of contiguous territory, or to maintain the integrity of political subdivisions."); Reynolds v. Sims, 377 U.S. 533, 578 (1964).

must be either the exclusive explanation for that district or, at the least, the dominant purpose behind it. Deciding on which standard is most consistent with *Shaw,* however, requires a more detailed analysis of the likely effects of these different scenarios on social perceptions.

Apart from the problem of mixed motives, these theoretically sufficient justifications will pose additional conceptual difficulties in practice. With respect to "community of interest" justifications, reapportionment bodies often give some weight to defining districts in terms of attributed common interests. The list of potential interests, all reflected in actual districting plans, includes urban interests, rural interests, coastal interests, agricultural interests, mountain interests, beachfront property ownership, ethnic interests, and many more. The intersection between race-conscious districting and the acknowledged legitimacy of preserving communities of interest generates at least three interrelated questions that courts applying *Shaw* must confront.

First, what kinds of interests can policymakers legitimately treat as the basis for attributing a community identity to some group? This question is normative, not descriptive. The issue is which of the many dimensions that might describe some group's common interest may be acted on by legislators. If living on the coast defines a legitimately distinct political interest, does being wealthy? If so, does being poor?

Once inroads into territorial districting can be made in the name of preserving communities of interest, the second question is whether policymakers can treat race itself as constituting such an interest. The argument for doing so is particularly strong when two of the predicates to a section 2 claim under *Gingles* are present: that is, when majorities engage in racial-bloc voting against minority interests that are themselves politically cohesive. Under these circumstances, there might be strong reasons for permitting, if not requiring, policymakers to define communities of interest in racial terms. If urban residents or rural residents can be assumed to have cohesive political interests, perhaps racial groups can as well[252] — particularly when this cohesiveness is not assumed, but demonstrated in fact.

With respect to "bizarrely" shaped race-conscious districts, however, *Shaw* seems to reject this kind of justification. If a "bizarre" district that appears to be a racial gerrymander cannot stand absent sufficient justification, the fact that the district was designed to be a racial gerrymander cannot provide that justification. This different

252. These assumptions are always subject to constitutional and VRA constraints, of course, that prohibit minority-vote dilution.

treatment of race and other interests may be a basis for criticizing *Shaw,* but it is the sine qua non of the decision.

Third, as the Court has recognized in other contexts, race frequently correlates with other socioeconomic factors.[253] In evaluating oddly shaped districts, this correlation will require courts to attempt to untangle legitimate communities of interest from the now-illegitimate one of race. If blacks as blacks cannot be grouped into a "highly irregular" district, but urban residents or the poor can, how will courts distinguish these contexts, and under what mixed-motive standard?

In short, even the justifications most readily acceptable in theory — acknowledgement of existing political boundary lines, recognition of natural geographic features, preservation of communities of interest — will pose considerable difficulty in application.

2. *More Complex Ends*

Redistricting necessarily distributes political power between parties and specific politicians, particularly incumbent officeholders. In general, the Supreme Court has embraced political realism and, at least to some extent, tolerated these facts as inevitable or even desirable. As Justice White, perhaps the leading judicial realist in this area, wrote for the Court in *Gaffney v. Cummings:*[254] "Politics and political considerations are inseparable from districting and apportionment. . . . [I]t requires no special genius to recognize the political consequences of drawing a district line along one street rather than another. . . . The reality is that districting inevitably has and is intended to have substantial political consequences."[255] After *Shaw,* the extent to which partisan objectives and protection of incumbent officeholders will be permitted to justify "highly irregular" race-conscious districts, if at all, becomes a critical question.

Currently, the Justice Department is taking the litigation position that these ends — partisan advantage or incumbent protection — do suffice to justify districts that *Shaw* requires to pass strict scrutiny. Thus, in post-*Shaw* litigation challenging certain black-dominated congressional districts in Louisiana, the Justice Department has filed a brief arguing that "where a compact majority-minority district could be drawn, but the state chooses to draw the district in a different, less

253. *See, e.g.,* Washington v. Davis, 426 U.S. 229, 248 n.14 (1976).

254. 412 U.S. 735 (1973).

255. 412 U.S. at 753; *see also* White v. Weiser, 412 U.S. 783, 795-96 (1973) ("Districting inevitably has sharp political impact and inevitably political decisions must be made by those charged with the task.").

– Ex. 8910 –

compact way to protect an incumbent or to give partisan advantage to one political party, the state will be able to explain the odd shape of the district on considerations other than race."[256] As a descriptive or analytic statement, this assertion is certainly accurate, as we argued earlier,[257] but whether these explanations will satisfy *Shaw* is more uncertain.

The pattern of judicial response to these motivations in other redistricting contexts forms an intricate mosaic. With respect to protecting incumbents, federal courts accept this as legitimate state policy in some contexts; moreover, federal courts are actually required to defer to state aims of this sort in some circumstances when those courts are called upon to redistrict. For example, in interpreting the cause of action *Davis v. Bandemer*[258] creates, which makes extreme partisan gerrymandering unconstitutional, courts increasingly focus on whether the plan treats incumbents of both parties "fairly." If a plan pairs too many incumbents from the same party against each other in a new district, this becomes significant evidence of impermissibly partisan redistricting.[259] In effect, this approach not only tolerates state efforts to protect incumbents, but comes dangerously close to ensuring fair districting by making public office a personal sinecure.[260] Federal courts have labeled protecting incumbents an "important state goal"[261] and a "legitimate" justification when special justifications for district design are required.[262] Similarly, the Supreme Court has held that, when federal courts are forced to choose among state redistricting plans, those courts must respect state policy preferences for pre-

256. Supplemental Brief for the United States as Amicus Curiae at 14, Hays v. Louisiana (W.D. La. filed Aug. 9, 1993) (No. 92-1522S).

257. *See supra* text accompanying notes 90-96.

258. 478 U.S. 109 (1986).

259. For example, after the Wisconsin legislature failed to reapportion itself following the 1990 Census, the court adopted its own plan and construed *Bandemer* to require that the smallest number of incumbents be paired. The critical feature of the plan chosen was that it "pair[ed] only 16 incumbents in both houses of the legislature, and only 6 of the same party." Prosser v. Elections Bd., 793 F. Supp. 859, 871 (W.D. Wis. 1992).

The Supreme Court has acknowledged the legitimacy of state efforts to protect incumbents on several occasions. *See, e.g.*, Karcher v. Daggett, 462 U.S. 725, 740-41 (1983); Burns v. Richardson, 384 U.S. 73, 89 n.16 (1966) (minimizing competition between incumbents does not necessarily establish invidiousness).

260. For a critique of the courts' protection of incumbents as a way of ensuring against extreme partisan gerrymandering, see Samuel Issacharoff, *Judging Politics: The Elusive Quest for Judicial Review of Political Fairness*, 71 TEXAS L. REV. 1643, 1672 (1993) ("Courts have repeatedly invoked *Bandemer* for the proposition that it is impermissible to place incumbents in head-to-head contests with each other in redrawn districts.").

261. Burton v. Sheheen, 793 F. Supp. 1329, 1342 (D.S.C. 1992) (describing the avoidance of incumbent contests as "an important state goal").

262. Gonzalez v. Monterey County, 808 F. Supp. 727, 735 (N.D. Cal. 1992).

– Ex. 8911 –

serving "the constituencies of congressional incumbents."[263]

Yet, in other redistricting contexts, federal courts have refused to acknowledge state interests in protecting incumbents. For example, when jurisdictions fail in repeated efforts to draw legally valid redistricting plans, federal courts assume that role. In these circumstances, some courts explicitly refuse to permit partisan or incumbency concerns to influence redistricting policy.[264] In the recent court-mandated reapportionment of the Minnesota legislature, the court evaluated the plan in terms of independent, nonpartisan fairness criteria, explicitly assuming a veil of ignorance concerning effects on incumbents.[265] In other cases, court-appointed expert witnesses have specifically requested that they not be provided with data concerning partisan or incumbent effects of various plans.[266] Arguably, an affirmative judicial role in redistricting might implicate different concerns than a more passive review of policymakers' reapportionment plans, but these cases reflect some judicial discomfort with legitimating too strongly state efforts to protect existing officeholders.

As for the legitimacy of partisan political aims, the argument that they justify "bizarre" race-conscious districts can be pressed in two forms. In the most compelling form, states might argue that oddly shaped districts are necessary to create a legislature that fairly reflects the distribution of partisan power in a state. In the least attractive but often more realistic form, states might argue that the political forces in control of redistricting ought to be permitted to exploit their advantage as far as possible. The argument would continue that, as long as this pursuit of political advantage is not carried to the unconstitutional

263. White v. Weiser, 412 U.S. 783, 797 (1973). Note, though, that the Court explicitly reserved the different question of whether a state can justify a deviation from population equality among districts that is a prima facie violation of equal protection on the ground that it is necessary to protect incumbents. 412 U.S. at 791-92. Justice Marshall rejected the Court's willingness to defer to state desires to protect incumbents, even when the question arises only in the context of federal courts' choosing between reapportionment plans after a constitutional violation has been established. 412 U.S. at 799 (Marshall, J., concurring in part).

264. *See, e.g.*, Prosser v. Elections Bd., 793 F. Supp. 859, 867 (W.D. Wis. 1992) (three-judge court; per curiam) ("Judges should not select a plan that seeks partisan advantage — that seeks to change the ground rules so that one party can do better than it would do under a plan drawn up by persons having no political agenda — even if they would not be entitled to invalidate an enacted plan that did so."); Terrazas v. Slagle, 789 F. Supp. 828, 844 (W.D. Tex. 1991) ("[E]nsuring free and equal access to the ballot, not partisan considerations or the protection of incumbents, is the sole focus of federal law in the area of redistricting and reapportioning seats to legislative bodies."), *aff'd.*, 112 S. Ct. 3019 (1992) (mem.).

265. "The plan developed by the court was developed without regard to the residence of incumbents. Adherence to principles of compactness and population equality, and respect for governmental boundaries insures that partisan gerrymandering is reduced or eliminated." Emison v. Growe, 782 F. Supp. 427, 445-46 (D. Minn. 1992) (footnote omitted), *revd.*, 113 S. Ct. 1075 (1993).

266. *See, e.g.*, Issacharoff, *supra* note 260, at 1694.

– Ex. 8912 –

extremes that *Bandemer* condemns, state political forces should be permitted to battle for control, even through the means of contorted, race-conscious districts. The Court has acknowledged the inevitable role of political aims in redistricting and has held that the pursuit of "political fairness," in the form of districts designed to bring about proportional representation of Democrats and Republicans in the state legislature, is not unconstitutional.[267] Beyond that context, however, the Court has not suggested how much weight partisan aims will be given under the Fourteenth Amendment.

This wavering and uncertain pattern of decisions suggests a limit on the willingness of courts to accept state partisan and incumbency-protection interests as compelling ones. *Shaw* offers no direct guidance on the question, but it seems unlikely that courts will view these interests as sufficient to justify "highly irregular" race-conscious districts. Both the tenor of *Shaw* and its formal legal requirement of strict scrutiny suggest the Court believes it has identified a value of profound constitutional importance that certain oddly shaped districts threaten. Although a state's partisan agenda might be a legitimate aim that courts will defer to in some contexts, it will be awkward for courts to declare it compelling enough to override the constitutional values *Shaw* identifies.

In addition, *Shaw* itself suggests that partisan motivations are a further reason to condemn, rather than to salvage, "bizarre" race-conscious districts. No veil obscured the possible role of incumbency protection behind the creation of District 12; the dissents raised it several times as a reason justifying the district,[268] while amicus curiae squarely presented it as a reason to find North Carolina's plan unconstitutional.[269] With partisan "defenses" so obviously available, *Shaw* would be a strange exercise in formality if the Court believes that, on remand, these defenses should be sufficient to justify contorted districts. Moreover, if *Shaw* rests on concern for social perceptions involving the role of race in politics, this concern suggests invalidating "highly irregular" districts when these perceptions are likely. *Shaw* resists permitting politicians to manipulate these social perceptions in pursuit of their own self-interest and partisan advantage. For these reasons, we consider it unlikely courts will find protection of incum-

267. *See supra* notes 254-55 and accompanying text.

268. Shaw v. Reno, 113 S. Ct. 2816, 2841 (1993) (White, J., dissenting), 113 S. Ct. at 2843 (Stevens, J., dissenting).

– Ex. 8913 –

bents or pursuit of partisan gain to be a sufficiently compelling justification for "highly irregular" race-conscious districts.

3. *VRA Compliance as an End*

Race-conscious districting most often occurs in the context of efforts to comply with the VRA's ban on minority-vote dilution.[270] But compliance with the VRA is not a unitary phenomenon. Claims of compliance can arise in purely remedial contexts, they can arise when jurisdictions claim to be preventing future violations, or they can arise when jurisdictions affirmatively use race to comply with the general aim of enhancing minority representation.

As in other areas involving race and the Constitution, the purely remedial context is the easiest one. When a minority district is *required* for a jurisdiction to comply with either section 2 or 5, that mandate should provide sufficient justification under *Shaw*.[271] With respect to district shapes, the difficult question will not be whether required compliance satisfies strict scrutiny, but what kinds of districts the VRA will be interpreted to require. We have described the conflicting ways in which federal courts have approached that statutory question.[272] *Shaw* directly bears on this question only when an interpretation of the VRA would be unconstitutional — that is, when the district it requires would be unconstitutionally contorted. But, *Shaw* will cast a larger shadow, for it will likely change the background assumptions courts bring to interpreting the Act. Courts might become more likely to find that the Act does not require extremely noncompact districts, particularly at the stage of determining substantive liability under the Act.[273] The difficult question will not be the formal

270. Many years ago, John Ely observed that legal standards treating ex post racially disparate impact as racial discrimination would necessarily require policymakers ex ante to engage in race-conscious policymaking. He noted:

> [So] long as the Court remains unwilling to order states to take race into account . . . judicial review must await proof of racial motivation and cannot be triggered by disproportion *per se*. To undertake automatically to invalidate [state actions] because of racial disproportion would obviously be to order that balance be intentionally achieved.

John H. Ely, *Legislative and Administrative Motivation in Constitutional Law*, 79 YALE L.J. 1205, 1260 (1970). Because the VRA prohibits electoral arrangements that discriminate in intent as well as result, policymakers must be aware of — rather than indifferent to — the racial distribution of political power that different electoral structures will produce.

271. *See, e.g., Shaw*, 113 S. Ct. at 2830 ("The States certainly have a very strong interest in complying with federal antidiscrimination laws that are constitutionally valid as interpreted and as applied."). There is some circularity, inevitably, to this analysis. If only "highly irregular" districts trigger strict scrutiny, then only those districts require special justification. But as a statutory matter, courts are unlikely to interpret the Act to *require* highly irregular districts after *Shaw*.

272. *See supra* text accompanying notes 160-76.

273. Even if courts become more strict in the way they interpret the first prong of *Gingles*, thus finding no liability when no reasonably compact minority district can be created, they might

– Ex. 8914 –

one of whether VRA compliance is sufficiently compelling, but how broadly the courts will construe this compliance. We examine this question shortly.

Apart from the pure remedial context, jurisdictions might use race to forestall potential VRA violations. With respect to oddly shaped minority districts, the crucial question is whether *Shaw* will lead to *Croson*-like constraints on racial redistricting.[274] Must jurisdictions first establish a factual predicate for the position that race-conscious districting is a necessary preventative? What evidence would be required and what level of proof must be met? For example, must jurisdictions engage in the costly and complex process of establishing racially polarized voting patterns, a task plaintiffs must undertake to establish a section 2 violation? Because we are focused here on "highly irregular" districts, it is unlikely jurisdictions will be able to establish that such districts are necessary to avoid substantive VRA liability.[275]

Finally, jurisdictions might seek to justify oddly shaped minority districts not in remedial terms, but prospectively. If forced to put this in terms of compliance with the VRA, jurisdictions might argue that such districting is consistent with the general purposes and spirit of the Act, even if not technically required. Jurisdictions might assert, for example, that these districts are a means of enhancing the legitimacy, fairness, and responsiveness of democratic institutions. Under *Voinovich v. Quilter*,[276] nothing in the VRA prohibits race-conscious districting justified in these terms. But, whatever the constitutional status of such justifications for race-conscious districts that are reasonably compact, *Shaw* seemingly requires that these justifications be found insufficient for "highly irregular" districts. *Shaw* requires strict scrutiny for irregular districts, and, again, it is difficult to see the point

still *permit* "highly irregular" districts as a remedy *after* liability has otherwise been found. Thus, once § 2 requires a jurisdiction to create a minority district, the jurisdiction might prefer an irregular to a compact district. In this context, however, the jurisdiction could not defend itself on the ground that the VRA *required* the irregular district. The legal question would then be whether the creation of this irregular district was "narrowly tailored" to remedy the violation, a question we address *infra* at text accompanying notes 278-80.

274. We focus here only on oddly shaped districts, rather than race-conscious districts in general, because of our view that *Shaw* applies only to the former. *See supra* text accompanying notes 57-74.

275. If the Justice Department denied § 5 preclearance on the ground that the failure to create a particular, "highly irregular" district would amount to a potential § 2 violation, a jurisdiction that complied by drawing such a district would likely have sufficient justification. Of course, an aggressive interpretation of *Croson* could further require that the Justice Department's conclusion of potential § 2 liability itself rest on a sufficient factual foundation, such as proof of racially polarized voting in the relevant area.

276. 113 S. Ct. 1149 (1993).

in that requirement if jurisdictions can successfully defend with the argument that they were seeking to enhance minority representation.[277]

B. *Means: The Requirement of Narrow Tailoring*

In addition to sufficiently compelling ends, *Shaw* requires "narrowly tailored" means that advance those ends with precision.[278] This will be a complex undertaking, again raising, among other difficulties, the problems of mixed motives.

Consider VRA compliance. When the Justice Department under section 5 or the courts under section 2 find that a jurisdiction is required to create an additional minority district, neither typically specifies precisely where that district must be located and how it must be designed. This policy of self-abnegation rests both on the recognition that districting implicates multiple, diverse values, and on policy reasons for deferring to state recommendations of those values. As long as the jurisdiction gets to the required end state and creates the additional district, federal concerns are satisfied.

In this context, the meaning of "narrowly tailored" is obscure. Absent direct specification from either the courts or the Justice Department as to how a district is to be designed, no obvious baseline exists against which to measure "narrowly tailored."

One solution is to construe this language to suggest that the minority districts the VRA requires must be drawn in the most compact way possible. Yet this would confuse the purpose of *Shaw*'s strict scrutiny standard and require jurisdictions, for no obvious purpose, to compromise significant redistricting values. The purpose of demanding close connections between means and ends is to ensure that the state is not covertly pursuing forbidden ends. But compactness is not constitutionally required;[279] *Shaw* does not forbid noncompact districts per se. Instead, the suspect districts are those so noncompact as to create the social perception that the single value of race-conscious districting has subordinated all other districting values.

As a result, "narrowly tailored" in this context should mean no

277. As we argued earlier, *see supra* text accompanying notes 126-32, *Shaw* can be read broadly and narrowly; if *Shaw* applies only when a more compact minority district could have been created, then the inability to do so would provide a sufficient defense under strict scrutiny.

278. Shaw v. Reno, 113 S. Ct. 2816, 2819 (1993). This statement is made in the specific context of remedying violations under § 5's nonretrogression standard. 113 S. Ct. at 2819. The Court does not make a similarly explicit statement regarding narrow tailoring with respect to § 2. Nonetheless, nothing the Court says about § 5 would appear to distinguish it from § 2 in this respect.

279. *Shaw*, 113 S. Ct. at 2827 (citing Gaffney v. Cummings, 412 U.S. 735, 752 n.18 (1973)).

– Ex. 8916 –

more than avoiding "highly irregular" district shapes. This view may make the means test appear redundant, given that *Shaw* requires strict scrutiny for precisely such districts. Interpreted this way, however, the narrow tailoring requirement would still be an element in *Shaw*'s logic because it would clarify that vague assertions of compliance with the VRA will not suffice. At the same time, as long as jurisdictions are complying with their VRA obligations, while still accommodating traditional redistricting goals, *Shaw* implies that they will retain policymaking discretion to make trade-offs among these goals. *Shaw* requires that jurisdictions respect value pluralism and avoid value reductionism. The requirement of "narrow tailoring" should be construed with this principle in mind.

C. *Justifications: The General Problem*

Easily lost in this technical legal analysis is the essential nature of the districting process. Districting implicates an array of values, some relatively neutral, some intensely partisan. For the most part, one cannot rank these values in any lexical order; no decision rule specifies the precise trade-offs to be made among these values when they conflict.[280] Moreover, the design of even a single district reflects not one decision, but the cumulation of hundreds of small decisions — whether to include this or that section of adjacent towns, whether to extend the district to the north or to the west, even whether to include this or that street. In addition, district plans draw from a virtually unlimited range of potential alternatives. There is no ideal districting plan that forms a baseline against which to measure individual districts or a district plan.

Shaw attempts to pull one thread out of this tapestry; it demands specific, articulable justifications in one particular districting situation. It is not clear, however, whether this aim can be achieved without unraveling the fabric of the districting process. Districting plans are integrated bundles of compromises, deals, and principles. To ask about the reason behind the design of any one particular district is typically to implicate the entire pattern of purposes and trade-offs behind a districting plan as a whole.[281] Searching for "the reason" or

280. It is generally recognized that equal population and avoidance of minority-vote dilution are goals that must be achieved. Beyond that, there is widespread disagreement on the priority ranking of other goals.

281. *See, e.g.*, Robert G. Dixon, Jr., *Fair Criteria and Procedures for Establishing Legislative Districts*, 9 POLY. STUD. J. 839, 844 (1981) (noting that districting is not an exercise in logic but in compromise and accommodation); Issacharoff, *supra* note 260, at 1650 (noting that states are hard pressed to articulate coherent policies for districting plans "in light of the political horse-trading and compromises that typically — and perhaps inevitably — underlie such plans"). The difficulties here are analogous to those that underlie the judicial resistance to engage in substan-

"the dominant reason" behind a particular district's shape is often like asking why one year's federal budget is at one level rather than another. Moreover, to require a coherent explanation for the specific shape of even one district is to impose a model of legalistic decision-making on the one political process that least resembles that model.

These general pressures may lead *Shaw* in another direction. Rather than providing a doctrine for recovering the reasons behind an irregular district, *Shaw* might eventually become an external constraint on the districting process. That is, *Shaw* might come to define an outer constraint on extreme noncompactness. As long as redistricting bodies stay within that constraint, however, they will retain the discretion to make arbitrary, politically laden policy trade-offs between competing districting values. In this way, *Shaw* would not demand ex post what does not take place ex ante: reasoned articulation of specific purposes for drawing district boundaries in particular ways.

Rather than seeking the reasons an irregular district was drawn, courts might implement *Shaw* as a constraint on the extent to which districts can become extremely noncompact. With a clearly announced constraint on extreme noncompactness, political bodies will understand the domains in which they cannot act and those within which they retain policymaking discretion. As long as policymakers stay within this specified constraint, courts will not have to inquire into the reasons behind district designs. Many of the issues discussed above can then be bypassed. When policymakers continue to believe they have sufficient reasons for violating this constraint, courts will still have to evaluate those justifications. Yet such contexts are likely to be rare once a clear constraint is specified.

CONCLUSION

In some respects, *Shaw* might function as the *Baker v. Carr*[282] of the Voting Rights Act era. In *Shaw,* the Court found justiciable an entirely new kind of equal protection claim that constrains the design of election districts. Like *Baker,* the decision will be controversial, in part because it is bereft of virtually any guidance as to how the elusive principles that underlie its holding are to be turned into an administrable set of standards. In an area as explosive as race and redistrict-

tive rationality review of economic legislation; just as individual economic regulations are tied to each other through an ongoing process of compromise and logrolling, individual district lines cannot be rationalized apart from the compromises and trade-offs they embody. *See generally* Frank Michelman, *Politics and Values or What's Really Wrong with Rationality Review,* 13 CREIGHTON L. REV. 487 (1977) (analyzing rationality review of economic regulation).

282. 369 U.S. 186 (1962).

ing, the political, legal, and social costs of this uncertainty are potentially vast.

We have argued that *Shaw* ultimately must be understood in terms of judicial concern for "expressive harms." American conceptions of political representation are riven right now by competing ideals. Traditionally, the fundamental template has been that of the territorially based single-member districting system, in which geographically defined interests are the foundation on which political representation is built. Working within this mold, the VRA stresses instead direct representation of group interests, seeking to ensure the fair and effective representation of minority groups. In *Shaw,* the Court effectively held that the tension between these alternative visions had reached the breaking point. When jurisdictions create "bizarre" territorial districts, in single-minded pursuit of enhancing minority representation, they compromise the perceived legitimacy of political institutions. The harm is a generalized one, for it lies not in specific burdens on particular individuals, but in government's expression of disrespect for significant public values. Right or wrong, this is the theory on which *Shaw* is decided.

Expressive harms are notoriously difficult to translate into legal rules. We have argued that quantitative measures of compactness provide the most secure starting points for defining "bizarre" districts in principled and administrable terms. Using these measures, we have shown that North Carolina District 12 can legitimately be considered the least compact congressional district in the country. At the same time, other districts — majority and minority — are not far behind. The precise effect of *Shaw* will depend on how "irregular" a district must be to trigger strict scrutiny, but quantitative measures of compactness promise the most useful guidance for making that choice. *Baker* became meaningful once *Reynolds v. Sims*[283] translated it into the one-person-one-vote standard. If *Shaw* is to have its *Reynolds,* it will be through the quantitative measures of compactness we offer here.

283. 377 U.S. 533 (1964); *see also* Wesberry v. Sanders, 376 U.S. 1 (1964) (requiring one person, one vote for congressional districts). Professors Aleinikoff and Issacharoff make a similar observation. *See* Aleinikoff & Issacharoff, *supra* note 59, at 622 ("*Shaw* would then be the *Baker* of compactness standards, with its own *Reynolds* presumably to follow.").

IN THE UNITED STATES DISTRICT COURT
FOR THE MIDDLE DISTRICT OF NORTH CAROLINA

SANDRA LITTLE COVINGTON, et al.,	)

SPECIAL MASTER'S RECOMMENDED PLAN AND REPORT

On November 1, 2017, the United States District Court for the Middle District of North Carolina sitting as a three-judge panel comprised of the Honorable James A. Wynn, Judge of the United States Court of Appeals for the Fourth Circuit, the Honorable Thomas D. Schroeder, Chief Judge for the Middle District of North Carolina, and the Honorable Catherine C. Eagles, United States District Judge for the Middle District of North Carolina, (hereinafter "the Court") appointed me as Special Master in the above captioned case. Appointment Order, Nov. 1, 2017, ECF No. 206 (hereinafter the "Order"). The Order directed the Special Master, by December 1, 2017, "to submit a report and proposed plans to remedy the unconstitutional racial gerrymander" of various districts in the 2011 Enacted Senate and House districting plans for the North Carolina General Assembly. *Id.* at 5. Herein provided is the Plan and Report called for in the Court's Order.

Exhibit 1 presents statewide and selected county maps of the Special Master's Recommended Plan, along with analogous maps from the Enacted 2011 and 2017 Plans for comparison. Exhibit 2 presents population deviations for all districts in the Special Master's Recommended Plan, the Enacted 2011 Plan, and the Enacted 2017 Plan. Exhibit 3 presents

NCLCV v. Hall
21 CVS 15426
LDTX090

Reock and Polsby-Popper compactness statistics for all districts in the Special Master's Recommended Plan, the Enacted 2011 Plan, and the Enacted 2017 Plan. Exhibit 4 presents a report on splits of county and municipality boundaries for all districts in the Special Master's Recommended Plan, the Enacted 2011 Plan, and the Enacted 2017 Plan. Exhibit 5 presents a report on splits of 2010 Voter Tabulation Districts (hereinafter "precincts"), as provided by the U.S. Census Bureau, for all districts in the Special Master's Recommended Plan, the Enacted 2011 Plan, and the Enacted 2017 Plan. Exhibit 6 provides a breakdown of the districts by Voting Age Population for Census-designated racial and ethnic groups for all districts in the Special Master's Recommended Plan, the Enacted 2011 Plan, and the Enacted 2017 Plan. Exhibit 7 provides statewide and county maps for the Special Master's Draft Plan, as well as associated statistical reports. Exhibit 8 includes the briefs and maps filed by Plaintiffs in response to the Special Master's Draft Plan. Exhibit 9 includes briefs provided by the Legislative Defendants in response to the Special Master's Draft Plan. Exhibit 10 provides color maps of alternatives to the Recommended Senate and House Plans for Guilford County. Exhibit 11 provides a list of the incumbents assigned to each district in the Special Master's Recommended House and Senate Plans. Exhibit 12 provides the Plaintiffs' Proposed House and Senate Plans. Exhibit 13 provides the Court's November 1st Order Appointing the Special Master. In addition to the above, the Court, the parties, and the North Carolina General Assembly have been provided with 2010 Census block equivalency files and shapefiles for the Special Master's Draft Plan, the Special Master's Recommended Plan, and alternate plans, as well as a "stat pack" with computer generated reports describing features of the Recommended Plan in detail.

Background

On August 11, 2016, the Court struck down twenty-eight districts in the State House of Representatives and Senate plans enacted in 2011 by the North Carolina General Assembly (hereinafter Enacted 2011 Plans). *Covington v. North Carolina*, 316 F.R.D. 117, 176 (M.D.N.C. 2016), *aff'd in relevant part*, 137 S. Ct. 2211 (2017) (mem.). The Court ruled those districts unconstitutional under the Equal Protection Clause of the Fourteenth Amendment. In particular, the Court found that those districts were drawn with race as their predominant purpose in violation of *Shaw v. Reno*, 509 U.S. 630 (1993), and its progeny, and that neither section 2 nor section 5 of the Voting Rights Act of 1965 justified doing so. 316 F.R.D. at 167-77.

Following the 2016 election and additional proceedings in both the District Court and the United States Supreme Court, the North Carolina General Assembly passed a remedial redistricting plan on August 31, 2017 (hereinafter the Enacted 2017 Plan), approximately one year after the Court's decision striking down the Enacted 2011 Plan. On September 15, 2017, Plaintiffs filed objections to three Senate districts and nine House districts. Plaintiffs contended that Enacted 2017 Senate Districts 28 and 21 and Enacted 2017 House Districts 21 and 57 continued to violate the Equal Protection Clause in that, even in their revised configurations, race continued to be the predominant factor in their construction. They also alleged that certain districts violated the North Carolina State Constitution. They claimed that Enacted 2017 House Districts 36, 37, 40, 41, and 105 were redrawn in violation of the provision of the state constitution that prohibits redistricting more than once per decade. *See* N.C. CONST. art. II, §§ 3(4), 5(4). Because those districts did not adjoin the districts ruled unconstitutional racial gerrymanders, the Plaintiffs argued, redrawing those districts was not necessary to address the constitutional infirmities identified in the Court's decision. They also argued that Enacted 2017

House Districts 10 and 83 violated the state constitution's Whole County Provision, N.C. CONST. art. II, §§ 3(3), 5(3), because the General Assembly could have drawn a plan in which those districts traversed fewer counties or in which fewer counties were split by certain districts. Finally, the Plaintiffs claimed that Enacted 2017 Senate District 41 was noncompact to the point of violating the Whole County Provision. After Legislative Defendants filed their response, the Court held a hearing on those objections on October 12, 2017.

On November 1, 2017, the Court issued the Order appointing a Special Master and raising concerns as to the legality of the Enacted 2017 Plan. In particular, the Court expressed "serious concerns that 2017 Enacted Senate Districts 21 and 28 and 2017 Enacted House Districts 21 and 57 fail to remedy the identified constitutional violation" from the Enacted 2011 Plan. The Order explained:

> Among other concerns, some or all of the proposed remedial districts preserve the core shape of the unconstitutional version of the district, divide counties and municipalities along racial lines, and are less compact than their benchmark version. In some cases, the General Assembly's use of incumbency and political data in drawing its proposed remedial districts embedded, incorporated, and perpetuated the impermissible use of race that rendered unconstitutional the 2011 districts. The 2017 Enacted Districts do not appear to cure the constitutional violations found as to 2011 Enacted House Districts 21 and 57 and Senate Districts 21 and 28.

Order at 1-2. In other words, the Court emphasized that, despite the 2017 revisions, the constitutional infirmity identified in some of the 2011 districts remains. The district boundaries may have moved somewhat, but according to the Court, some districts continue to violate, in critical respects, the Constitution's prohibition against unjustified and excessive use of race in the design of districts.

For House districts in Wake and Mecklenburg Counties, the Court expressed a different set of concerns related to the Enacted 2017 Plan's violation of the North Carolina State Constitution. As described above with respect to the Plaintiffs' objections to the 2017 Plan, several of the districts in those counties did not need to be redrawn in order to remedy the constitutional infirmity as to racial predominance in the Enacted 2011 House Districts 33, 38, 99, 102, and 107. Because the North Carolina Constitution prohibits redistricting more than once a decade, the Court observed that any lines redrawn in 2017 must be justified by a need to correct some legal infirmity (*e.g.*, unconstitutional racial gerrymandering) in the plan adopted following the decennial census. As the Court has concluded, "[u]nless required by Court order, the General Assembly was prohibited by the North Carolina Constitution from redrawing these districts. N.C. Const. art. II §§ 3(4), 5(4)." Order at 2. As is shown in the Special Master's Recommended Plan, it was, indeed, possible to reconfigure the districts deemed unconstitutional while retaining the Enacted 2011 districts that did not adjoin them.

The Charge to the Special Master

The Court determined that appointment of a Special Master was necessary because of the "fast approaching filing period for the 2018 election cycle and the specialized expertise necessary to draw district maps." Order at 4. The Court confronted a problem familiar to redistricting cases. The tightness of the election schedule and especially the impending candidate-filing deadline often makes it extremely challenging, within the necessary time period, to perform all the tasks necessary to have a plan in place. It requires the Court to evaluate a state's plan, to issue an opinion explaining the legal infirmities therein, to appoint a Special Master (after the parties have had an opportunity to object), to have that Special Master draw a remedial plan (often with input from the parties), to have a hearing and entertain objections to

the Special Master's Plan, to make any warranted changes to the Special Master's Plan, and then to adopt the Plan as the Court's plan. Allowing the Special Master to begin his work once the Court has made its initial determination that a remedial plan will be necessary is one way to ensure that the Court's plan will be ready in time for candidates to know in which districts they will need to file to run for office. Of course, in the end, regardless of the sequencing of the tasks above, the Court will only adopt a plan if it determines, after hearing from the parties, that the plan remedies the legal infirmity the Court has identified in the state's plan.

With these time pressures in mind, the Court issued an order on November 1, 2017, appointing a Special Master and defining his responsibilities. The Court ordered the Special Master to develop, by December 1, 2017, redistricting plans that addressed the infirmities of the Enacted 2017 Plans for the North Carolina General Assembly, as identified in the order and reflected in the Court's earlier opinion in *Covington*, 316 F.R.D. 117. Order at 5. The Order laid out specific criteria that would guide production of the Special Master's Plan, as well as a procedure for developing the plan. *See* Order at 9-10 (detailing principles of the plan and other aspects of the process, such as a bar on ex parte communication, permission for hiring assistants and using state resources, and authorization for a release on a draft plan to garner feedback).

In particular, the Court ordered that "[i]n drawing remedial districts, the Special Master shall":

> a. Redraw district lines for the Subject Districts and any other districts within the applicable 2017 county grouping necessary to cure the unconstitutional racial gerrymanders. As to House District 57, the redrawn lines shall also ensure that the unconstitutional racial gerrymanders in 2011 Enacted House Districts 58 and 60 are cured. As to 2011 Enacted House Districts 33, 38, 99, 102, and 107, no 2011 Enacted House Districts which do not adjoin those

districts shall be redrawn unless it is necessary to do so to meet the mandatory requirements set forth in Paragraphs 2(b) through 2(e) of this Order, and if the Special Master concludes that it is necessary to adjust the lines of a non-adjoining district, the Special Master shall include in his report an explanation as to why such adjustment is necessary.

b. Use the 2010 Federal Decennial Census Data;

c. Draw contiguous districts with a population as close as possible to 79,462 persons for the House Districts and 190,710 persons for the Senate Districts, though a variance up to +/- 5% is permitted and authorized if it would not conflict with the primary obligations to ensure that remedial districts remedy the constitutional violations and otherwise comply with state and federal law, would enhance compliance with state policy as set forth in subsection (f) below, and would not require redrawing lines for an additional district.

d. Adhere to the county groupings used by the General Assembly in the 2017 Enacted Senate and House Plans;

e. Subject to any requirements imposed by the United States Constitution or federal law, comply with North Carolina constitutional requirements including, without limitation, the Whole County Provision as interpreted by the North Carolina Supreme Court.

f. Make reasonable efforts to adhere to the following state policy objectives, so long as adherence to those policy objectives does not conflict with the primary obligations of ensuring that remedial districts remedy the constitutional violations and otherwise comply with state and federal law:

    i. Split fewer precincts than the 2011 Enacted Districts;

    ii. Draw districts that are more compact than the 2011 Enacted Districts, using as a guide the minimum Reock ("dispersion") and Polsby-Popper ("perimeter") scores . . . ; and

iii. Consider municipal boundaries and precinct lines.

g. After redrawing the districts, in view of the policy decision by the General Assembly that efforts to avoid pairing incumbents are in the interest of North Carolina voters, the Special Master may adjust district lines to avoid pairing any incumbents who have not publicly announced their intention not to run in 2018, but only to the extent that such adjustment of district lines does not interfere with remedying the constitutional violations and otherwise complying with federal and state law. Additionally, the Special Master shall treat preventing the pairing of incumbents as "a distinctly subordinate consideration" to the other traditional redistricting policy objectives followed by the State. . . .

h. Except as authorized in Paragraph 2(g), the Special Master shall not consider incumbency or election results in drawing the districts. . . .

i. The Special Master may consider data identifying the race of individuals or voters to the extent necessary to ensure that his plan cures the unconstitutional racial gerrymanders and otherwise complies with federal law.

Order at 5-7 (internal citations omitted).

The Court further specified what should be contained in the Special Master's Report accompanying the Plan:

a. At least one recommended redistricting plan for each Subject District;

b. For each county or county grouping encompassing a Subject District, a color map showing the recommended remedial plan;

c. For each Subject District, an analysis (i) explaining the proposed remedial plan and the recommendation of that plan over the 2017 Enacted Districts or the Plaintiffs' proposed districts; (ii) covering any matters required elsewhere in this Order; and (iii) discussing any criteria, issues, or questions which the Special Master believes may arise or which will otherwise aid the Court;

d. A comparison of the Special Master's districts with the related 2011 and 2017 Enacted Districts as to population deviations; compactness; county, municipal, and precinct splits; incumbency pairing; Black Voting Age Population; and

any other relevant criteria; and

e. A "stat pack" for the recommended plans.

Order at 12-13.

Creation of the Special Master's Plan

The one-month deadline for constructing the Recommended Plan required that preliminary work begin immediately following the Appointment Order on November 1. Among other tasks, the preliminary work included becoming familiar with the earlier decisions of the Court, with the filings of the parties to that point, and with the 2011 and 2017 redistricting plans for the North Carolina General Assembly. In addition, drawing the Draft Plan required the purchase of certain software (Maptitude for Redistricting by Caliper Corporation) and hardware.

Given the intense partisan concerns that always surround processes of this sort and the critical importance of nonpartisanship to the legitimacy of the Special Master's work, the Special Master's Plan needed to be compliant with the applicable law, transparent in its following of the Court's Order, and based on the articulated state redistricting principles. Experience in several similar redistricting disputes counseled in favor of gathering much-needed feedback from the parties in the formulation of the plan. Therefore, any draft redistricting plan would need to be submitted to the parties with enough time for them to raise objections and make suggestions. In particular, because the issues surrounding incumbency present knotty problems for any nonpartisan plan of this sort, the Draft Plan would ignore incumbent residence and then be altered following advice from the parties on how to "unpair incumbents" – that is, to the extent possible, to ensure that one and only one incumbent seeking reelection was placed in any given district. This principle was one explicitly called for by the Court's Order, based on the state's

articulated goal in its redistricting plan under review. Because the parties are in a better position to know which incumbents plan to run for reelection[1] and whether a proposed redistricting plan might change their electoral calculations, it is necessary to get some input from the parties throughout the process to make sure that any such "unpairing" was something that the incumbents themselves desired. However, per the Court's Order, the Recommended Plan would honor any request by the parties to unpair incumbents, so long as it did not violate the other criteria in the Order.

That strategy and those goals led to the creation of the Special Master's Draft Plan. With respect to the 2017 Enacted Districts for which the Court raised concerns as to racial predominance, the Draft Plan provided a limited remedy, constructed of compact districts made of whole precincts that respected political subdivision lines, specifically the boundaries of Census Designated Places ("CDPs"), which usually refer to city boundaries. Of course, sometimes these criteria were in tension with each other – for example, when a city is, itself, noncompact and noncontiguous, as is frequently the case in North Carolina, or when precinct boundaries cross municipal boundaries. Nevertheless, these factors comprise the kind of nonpartisan redistricting principles typical of court-drawn plans. Although any change in district lines will have partisan, electoral, or incumbency-related effects, a redistricting plan adhering to these principles is less open to the charge of partisan manipulation than one based on more amorphous criteria as to how communities "ought" to be represented.

[1] The Court ordered the parties to provide the Special Master by November 8, 2017, with a list of incumbents running for reelection, along with their address and the date they were first elected. *See* Order at 9. The Legislative Defendants provided such a list on November 8, although the Plaintiffs and Defendants could not agree on whether Representative Larry Bell was running for reelection. ECF No. 209. By later notice, Representative Bell confirmed he was not running for reelection. Larry Bell Declaration, Nov. 10, 2017, ECF No. 211. The Plaintiffs and Defendants also disagreed on the address for Senator Trudy Wade. With the release of the Special Master's Draft Plan and Report, the parties were ordered to submit the data on incumbent address as a geographic layer to be incorporated into Maptitude for Redistricting (the geographic information system used to construct the Special Master's Plan). The Legislative Defendants did so on November 14, 2017. ECF No. 214.

Construction of the Draft Plan could only proceed, however, after analysis and rejection of the Plaintiffs' proposed remedial plans. In its Order, the Court expressed its "concern[] that among, other things, some of the districts proposed by Plaintiffs may be the result of impermissible political considerations." Order at 2. The Legislative Defendants, moreover, characterized the Plaintiffs' remedial plan as motivated by partisan concerns. *See* Legislative Defendants' Response to Plaintiffs' Objections at 2, ECF No. 192 ("Plaintiffs' proposed house and senate districts target numerous Republican members of the legislature . . . , the only reason for which appears to be to punish those members for being Republican."); *id.* at 47 ("the Covington plans . . . were motivated primarily by political considerations"). Of course, political considerations admittedly played a role in the Enacted 2011 and 2017 Plans, as they do in most redistricting plans.

The Special Master's Plan, however, could not be drawn on a similarly political basis. First, the Court prohibited the Special Master from considering election results in drawing districts, and permitted consideration of incumbency only to the limited degree of unpairing incumbents after drawing the plan. Order at 7-8. Second, Supreme Court precedent makes clear that courts lack "political authoritativeness" and must act "in a manner free from any taint of arbitrariness and discrimination" in drawing remedial plans. *Wise v. Lipscomb*, 437 U.S. 535, 541 (1978) (quoting *Connor v. Finch*, 431 U.S. 408, 417 (1977)). A nonpartisan approach to redistricting is absolutely critical to bolstering the legitimacy of the Special Master's Plan. Third, the Court tasked the Special Master with remedying a legal problem, not with addressing political unfairness. The Special Master's Plan must be evaluated on the basis of its correction of the state and federal constitutional problems for which the Court has ordered a remedial plan.

It shall make revisions only to the extent necessary to remedy the legal infirmity in the legislature's plan. *See Perry v. Perez*, 565 U.S. 388, 394 (2012).

Given those considerations and the specific criteria for the Special Master's Plans called for in the Court Order, the Plaintiffs' proposed plans could not be adopted as the Special Master's Plan. To be clear, the Plaintiffs' proposals complied with applicable law. The plans were composed of equipopulous districts that complied with one person, one vote, and at least on the face of them, they did not appear to use race as the predominant factor in their creation. However, even leaving the allegation of partisanship aside, the Plaintiffs' plans fell short according to the Court's criteria and redrew more districts than were necessary to remedy the legal violation. In any event, the Special Master's Recommended Plan does a better job in complying with such criteria.

The Plaintiffs submitted two sets of plans as part of this litigation. What they describe in their briefing as "the Plaintiffs' Plans," are presented as Exhibit 12. However, they also included alternative plans for some districts (so-called "*Cromartie* Demonstrative Maps") provided by their expert witness William R. Gilkeson, Jr. *See* Plaintiffs' Objections to Defendants' Remedial Districts and Memorandum of Law, at 2-23, ECF No. 187-7. Neither warranted adoption as the Special Master's Plan.

First, the Plaintiffs' Plans redrew more districts than necessary to remedy the constitutional violations. Their Proposed House and Senate Plans for Guilford County redrew all of the districts there, despite the fact that they challenged only one district in each plan (Enacted 2017 House District 57 and Enacted 2017 Senate District 28), which were the only

Guilford districts for which the Court expressed constitutional concerns.[2] They also completely reorganized the districts in Wayne, Sampson, and Johnston Counties to deal with the constitutional objection to Enacted 2017 House District 21. Likewise, the plans for Wake and Mecklenburg Counties, while reinstating the Enacted 2011 districts deemed unnecessarily redrawn to cure the Equal Protection violations there, redrew several districts that did not need to be redrawn to harmonize the 2017 and 2011 districts.

Second, in some areas the Plaintiffs' Plans did a poor job of respecting municipal lines. This was especially the case in Guilford County, once again, wherein a single district (Plaintiffs' House District 57) was located within Greensboro, with all of the remaining districts in the County extending from outside Greensboro to pick up slices of the city. The *Cromartie* Demonstrative Map for those districts fared better, but even it placed two districts largely within Greensboro, whereas a third (as demonstrated in the Special Master's Draft and Recommended Plans) is possible. The remaining districts in that alternative plan, therefore, extended from outside Greensboro to take in significant portions of Greensboro.

Finally, several of the Plaintiffs' proposed districts were noncompact. This was especially the case in their proposed House districts for Wayne, Sampson, and Johnston Counties. Plaintiffs' House District 76 followed the border of Johnston County with Nash, Wilson, and Wayne Counties, but it then snaked south to follow Wayne County's border with Sampson, Duplin and Lenoir. Plaintiffs' District 28 occupied most of southern Johnston County but entered Sampson County with a fishhook-style intrusion. Similarly, Plaintiffs' Senate Plan for Guilford County, while attempting to place two districts that straddle Greensboro, contained

[2] This is also the case for the *Cromartie* Demonstrative Maps. That proposal for the Guilford Senate Districts unnecessarily redraws the Guilford County portion of Senate District 29, which is primarily anchored in Randolph County.

one district (Plaintiffs' District 28) which spanned nearly the entire midsection of the county, but also needlessly traveled southwest to split the CDP of High Point. As a result, Plaintiffs' Senate Districts 24 and 29 filled in the "leftover" territory in northern and southern Guilford County in a decidedly noncompact fashion.

For these reasons, along with the general warning issued by the Court to avoid adopting a plan tainted by political considerations, the Special Master declined to adopt the Plaintiffs' Plan and set out to craft the Draft Plan and eventually, the Recommended Plan. The remainder of this Report explains why the Special Master's Recommended Plans solve the constitutional problems the Court identified in the 2017 Enacted Plans, and are superior according to the criteria the Court laid down in its order.

Release of the Special Master's Draft Plan and Order

The Special Master's Draft Plan and Order were released on November 13, 2017, to give the parties an opportunity to propose revisions and, in particular, to make suggestions as to how to unpair incumbents. *See* Exhibit 7. The Draft Plan also included an order to the parties to submit objections and revisions by November 17, 2017. Reply briefs were to be submitted by November 21, 2017, at which time the parties were "encouraged to identify which proposed changes of the plaintiffs and defendants, if any, were jointly supported by the parties." *Id.* at 19. The parties were also ordered to supply by November 14, 2017, in electronic form, a geographic layer . . . that includes the location of the residences of all current incumbents in the North Carolina General Assembly." *Id.* The Legislative Defendants did so on November 14.

The parties filed their responses to the Special Master's Draft Plan on November 17, 2017. *See* Exhibits 8 and 9. The Plaintiffs offered several suggestions related to unpairing certain incumbents. In particular, they proposed revisions (two scenarios, in fact) that would unpair two incumbents in Draft Plan House District 59, by moving Draft Plan District 58 south to pick up the residence of Representative Amos Quick. They also proposed several changes to the Draft Plan's districts in Wake County. They proposed restoring a split precinct in House District 40 that was split in the 2011 Plan. They also proposed revisions that would unpair incumbents placed together into Draft Plan House District 49. In particular, Plaintiffs proposed moving the boundaries of Draft Plan House District 34 so that it would capture the residence of Representative Grier Martin. Although the Special Master's Draft Plan paired incumbents in other districts, as well, the Plaintiffs did not propose changes to any other districts.

The Legislative Defendants took a different approach in their response to the Special Master's Draft Plan. *See* Legislative Defendants' Response to Special Master's Draft Report, Nov. 17, 2017, ECF No. 215. They did not propose changes to any specific districts. Indeed, they argued it was "inappropriate for the Court to authorize the special master to ask legislative defendants to comment on, or propose revisions of, districts drawn by the special master when the legislative defendants do not themselves speak for the entire General Assembly." *Id.* at 5. Instead, the Defendants reiterated their earlier objections to the appointment of the Special Master, argued that the Court and Special Master were without jurisdiction or authority to craft a remedial plan, and maintained that the Court's Order misinterpreted the North Carolina State Constitution. As mentioned above, the Legislative Defendants also argued that the Special Master's Draft Plan "improperly engaged in racial sorting" by adopting racial targets for the redrawn districts. However, the Legislative Defendants did not offer any suggestions as to how

to unpair incumbents or how to redraw individual districts, except insofar as they urged the adoption of the 2017 Plan.

On November 21, 2017, the parties filed reply briefs addressing the proposed revisions to the Special Master's Draft Plan. Because the Legislative Defendants had objected to any revisions to the Enacted 2017 Districts and suggested none of their own, the Plaintiffs limited their reply to legal arguments as to the requirements of the North Carolina Constitution and the precedent regarding race-based redistricting. *See* Plaintiffs' Response to Legislative Defendants' November 17, 2017 Filing, November 21, 2017, ECF No. 217. The Legislative Defendants, in their reply, objected *en masse* to all of the changes proposed by the Plaintiffs. Legislative Defendants' Response to Plaintiffs' Proposed Modifications to Special Master's Draft Plan, Nov. 21, 2017, ECF No. 218. They reiterated their position as to racial targeting in the Special Master's Draft Plan, and raised new concerns as to split precincts in House District 21, respect for municipal lines in Greensboro and Fayetteville, and the noncompactness of certain Guilford County districts. They also alleged that the Plaintiffs' proposed revisions only attempted to unpair Democrats, and as such, should not be honored by the Special Master in revising the Draft Plan. The Legislative Defendants, however, did not offer any suggestions as to how other incumbents might be unpaired, let alone concrete suggestions as to how the Draft Plan should be revised. In their view, the Special Master should advocate for the General Assembly and urge the Court to adopt the 2017 Enacted Plan.

As explained in greater detail in the descriptions of the individual districts, feedback from the parties led to several changes to the Special Master's Draft House Plan. In response to the Legislative Defendants' concern as to split precincts in Draft House District 21, the Special Master's Recommended House Plan repairs all of the split precincts but one (located in the

Sampson County portion of the district), which is equal to the number of split precincts in the Enacted 2017 version of the district. The Recommended House Plan also responds to the Plaintiffs' concerns as to the incumbent pairing in the Wake County districts. Based on criticism from the Legislative Defendants and suggestions from the Plaintiffs, the Recommended Plan modified the Guilford County House districts from the Draft Plan. As a result of these modifications, the districts in the Recommended House Plan are more compact, do not pair any incumbents, and disturb fewer districts from the 2017 Enacted Plan. No changes were made to the Draft Senate Plan to produce the Recommended Senate Plan.

Overview of the Special Master's Recommended Plan

The Court's Order mandated that the Special Master's Final Plan and Report contain an evaluation of the recommended districts and a comparison with the Enacted 2011 and 2017 Plans. Specifically, the Order requested "a comparison of the Special Master's Districts with the related 2011 and 2017 Enacted Districts as to population deviations; compactness; county, municipal and precinct splits; incumbency pairing; Black Voting Age Population; and any other relevant criteria." Order at 12-13. A detailed description of each district follows, but a few general points as to the redrawn districts can provide some context. Tables displaying data on the redrawn Senate Districts 21 and 28 and House Districts 21 and 57 are included within the text here, adjoining districts are further described in the detailed descriptions of the districts, and full statistics for all districts are included as attached Exhibits.

First, all of the districts in the Special Master's Plan comply with the law. The Court identified several areas of federal and state law in its order. The Special Master's plan must

comply with the equal population requirement ("one person, one vote") of the Fourteenth Amendment to the United States Constitution. It also must avoid running afoul of that same Amendment's prohibition against unjustified racial predominance in districting, which was the central constitutional flaw the Court identified in the Enacted 2011 Districts. Finally, the Special Master's Plan must comply with the requirements of the North Carolina Constitution, including the Whole County Provision referenced above.[3]

The Special Master's Recommended Plan complies with one person, one vote. The Court directed that the Special Master's Plan be comprised of "contiguous districts with a population as close as possible to 79,462 persons for the House Districts and 190,710 persons for the Senate Districts, though a variance up to +/- 5% is permitted and authorized" to comply with the other criteria in the Order. Order at 6. All of the districts in the Special Master's Recommended Plan comply with one person, one vote, in that their total population according to the 2010 Census was within five percent of the "ideal" population for each district. *See* Table A below and Exhibit 2. In some areas, as with the House Districts in Wayne and Sampson Counties, this proved quite difficult (as is revealed in both the Enacted 2017 Plan and the Special Master's Recommended Plan). The district deviations there necessarily equal five percent because the Whole County Provision of the State Constitution requires working within a county grouping to achieve equipopulous districts, if possible. For example, if a county's population totals 210% of the ideal district population, then two districts, each exactly 105% of an ideal population district, must be drawn. The deviations in the districts of the Special Master's

[3] Of course, the Special Master's Plan must also comply with the Voting Rights Act. *See* 52 U.S.C § 10301. No violations of the Voting Rights Act have been alleged with respect to the districts under review. Moreover, remedial plans for violations of the Voting Rights Act might require consideration of the kind of election data that the Court has barred the Special Master from considering in the construction of the Recommended Plan.

Recommended Plan do not materially differ from those in the 2011 or 2017 Plans, as all comply with one person, one vote.

Table A. Comparison of Population Deviations from Ideal Size Among Selected Districts[4]

	Population Deviation					Percent Deviation				
District	2011 Plan	2017 Plan	**Rec. Plan**	chg in abs dev from 2011	chg in abs dev from 2017	2011 Plan	2017 Plan	**Rec. Plan**	chg in abs dev from 2011	chg in abs dev from 2017
Senate 21	-7,508	-6,394	**-7,196**	-312	+802	-3.9%	-3.4%	**-3.8%**	-0.1%	+0.4%
Senate 28	8,729	6,428	**7,404**	-1,325	+976	4.6%	3.4%	**3.9%**	-0.7%	+0.5%
House 21	3,558	3,972	**3,969**	+411	-3	4.5%	5.0%	**5.0%**	+0.5%	0.0%
House 57	-118	3,293	**3,841**	+3,723	+548	-0.1%	4.1%	**4.8%**	+4.7%	+0.7%

Second, the Special Master's Recommended Plan complies with the constitutional prohibition on the predominant use of race in the construction of districts. *See Ala. Legis. Black Caucus v. Alabama*, 135 S. Ct. 1257, 1267 (2015). As is evident from the maps and accompanying statistics, the Recommended Plan is guided by traditional districting principles, such as compactness, contiguity, and respect for precinct and municipal boundaries. Unlike several districts in the 2011 and 2017 Enacted Plans, districts in the Special Master's Recommended Plan do not track precincts based on their racial composition, nor (contrary to the Legislative Defendants' assertions) do they set out to hit some preordained racial target. The fact that the districts happen to reduce the Black Voting Age Population (BVAP) in the redrawn districts, while increasing it in adjoining districts, is to be expected whenever a plan replaces racial predominance with other redistricting principles. *See* Table B below and Exhibit 6. The Special Master's Recommended Plan addresses the constitutional infirmity in the underlying

[4] The Special Master is greatly indebted to Professor Patrick Egan of the NYU Department of Politics for assistance in producing the tables, images, and exhibits for this Report and the Draft Report. Professor Egan did not play a role in construction of the plans themselves.

districts by redrawing them irrespective of the race of the inhabitants the districts would then capture. That practice is abundantly clear from the district boundaries, which track municipal lines wherever possible.

Traditional districting principles, such as compactness and respect for political subdivision lines, are the touchstones against which courts often measure racial predominance. Although racial predominance, like any other motivation, can be proven by way of direct or circumstantial evidence, violation of traditional districting principles, such as compactness, can "be persuasive circumstantial evidence that race for its own sake, and not other districting principles, was the legislature's dominant and controlling rationale in drawing its district lines." *Miller v. Johnson*, 515 U.S. 900, 913 (1995); *see also Covington*, 316 F.R.D. at 129 ("In general, [a *Shaw* claim] requires proof that 'the legislature subordinated traditional race-neutral districting principles, including . . . compactness, contiguity, and respect for political subdivisions . . . to racial considerations.'") (quoting *Miller*, 515 U.S. at 916). As such, a remedial plan grounded on these traditional districting principles will be less likely to replicate – even inadvertently – any racial predominance in the underlying plan.

Indeed, for this very reason, the Special Master's Plan is inoculated against the kind of attack that the Legislative Defendants seek to lodge with respect to racial predominance. In their briefs addressing the Special Master's Draft Plan, the Legislative Defendants argue that "[t]he special master has improperly engaged in racial sorting to create districts with a mechanical target of black voting age population between 39% and 43.6%." Legislative Defendants' Response to Special Master's Draft Report, at 15, ECF No. 215. They maintain that by frankly stating that the Special Master's Draft Plan removed "any residuum of racial predominance that

may have been expressed in the 2017 configuration of the district" the Special Master must have carefully constructed the remedial districts to hit race-based targets.[5] *Id.* at 18.

That claim is false, and the maps themselves belie that interpretation.[6] The Special Master's Plan removes the racial predominance of the Enacted 2017 Districts by replacing the constitutionally tainted districts with others that adhere to explicitly race-neutral criteria. To be sure, the Court authorized the Special Master to consider racial data in the construction of the plans "to the extent necessary to ensure that his plan cures the unconstitutional racial gerrymanders." Order at 8-9. However, as is clear from the Special Master's Draft Plan, the remedial districts were drawn not with any racial target in mind, but in order to maximize compactness, preserve precinct boundaries, and respect political subdivision lines.

This approach grew directly from the Court's Order. The Court expressed concerns with the Enacted 2017 Districts, in that "some or all of the proposed remedial districts preserve the core shape of the unconstitutional version of the district, divide counties and municipalities along racial lines, and are less compact than their benchmark version." Order at 2. To address those identified legal problems, the Special Master's Draft Plan does not preserve the core shape of the

[5] In their reply brief, the Legislative Defendants correct their misinterpretation of the Draft Report's mention of removing any "residuum of racial predominance." *See* Legislative Defendants Response to Plaintiffs' Proposed Modifications to Special Master's Draft Plan, Nov. 17, 2017, at 3 n.4. ECF Doc. 218. In a footnote they acknowledge: "To the extent the special master is referring to an alleged "residuum" of race in the 2017 plans from the 2011 version of the districts, it is unclear why the 2011 plans have any relevance to the special master's work. Absent a Section 5 preclearance requirement, the baseline plans for analysis are the 2017 plans enacted by the legislature. The 2017 plans stand or fall on their own as to any alleged racial gerrymandering." *Id.* The Legislative Defendants correctly understand the Special Master's intended use of the word "residuum of racial predominance," as referring to the constitutional infirmities identified in the 2011 Plan that remained in the 2017 Plan. Indeed, the point made in the Special Master's Draft Plan was precisely the one suggested by the Court in its Order, when it expressed concerns that preserving the core shape and other characteristics of the 2011 Districts perpetuated the unconstitutional features of those districts. *See* Order at 2. The 2017 plans cannot "stand on their own" if they substantially preserve the 2011 districts already deemed unconstitutional. Indeed, the task assigned to the Special Master was to design a plan that cures any constitutional infirmity remaining in the 2017 Plan that the Court had identified already in its decision striking down the analogous 2011 Districts.

[6] The actual statistics as to Black Voting Age Population in the districts undermine this claim as well, but that issue is addressed in the discussion of the districts themselves.

unconstitutional version of the district, avoids dividing counties and municipalities, and attempts to enhance compactness. Hitting some arbitrary racial target was not a goal of the Special Master's Plan. Rather, the Special Master sought to create remedial districts that, without question, extirpated the unconstitutional racial predominance from the 2011 Districts that the Court has identified as reemerging in the Enacted 2017 Plan.

Table B. Comparison of Black Voting Age Population (BVAP) % Among Selected Districts

District	2011 Plan	2017 Plan	**Rec. Plan**	chg from 2011	chg from 2017
Senate 21	51.5%	47.5%	**42.1%**	-9.4%	-5.4%
Senate 28	56.5%	50.5%	**43.6%**	-12.9%	-6.9%
House 21	51.9%	42.3%	**39.0%**	-12.9%	-3.3%
House 57	50.7%	60.8%	**38.4%**	-12.3%	-22.4%

Finally, different considerations factored into the creation of the plan for the districts in Wake and Mecklenburg Counties, given that the Plan was designed to remedy a different type of legal violation there. (One should note, however, that certain districts in those counties, which the Special Master retained, such as Recommended District 38, fall outside the supposed race-based range that the Defendants allege was motivating the Special Master in the construction of the remedial districts.) The Court's Order was quite specific in its goal to recreate the districts from the 2011 plan that did not adjoin the unconstitutional districts. As explained in greater detail below, in order to deal with the excess population created by merging two different redistricting plans together, several of the districts in Wake County, but only three additional districts in Mecklenburg County needed to be redrawn. The principle guiding the Special Master's plans for those counties was simply to draw compact districts that achieved population

equality, using whole precincts to the extent possible, while redrawing the minimal number of districts necessary to resolve the state constitutional problem.[7]

In addition to these legal requirements, the Court urged the Special Master to "make reasonable efforts to adhere to the following state policy objectives." Order at 6-7. Those included splitting fewer precincts than the 2011 Enacted Districts, drawing districts that are more compact than the 2011 Enacted Districts (using the Reock and Polsby-Popper measures), and considering municipal boundaries and precinct lines. The Special Master's Recommended Plans comply with all these additional objectives.

To the extent possible, each district in the Special Master's Recommended Plan is made of whole precincts. In its evaluation of the Enacted 2011 Plan, the Court noted that, of the 2,692 precincts in North Carolina, the Enacted 2011 Senate Plan split 257 precincts, and the Enacted 2011 House Plan split 395 precincts. *Covington*, 316 F.R.D. at 137. The Court noted evidence that precincts were split in the Enacted 2011 Plans "for the purpose of separating voters according to race." *Id*. The split precincts in the Special Master's Recommended Plan either are required by one person one vote, as in House District 21, or they were mandated by the Court when it directed the Special Master to restore the 2011 Districts in Wake and Mecklenburg Counties. As a result, the total number of split precincts in the Special Master's Plan is higher than the Enacted 2017 Plans, but much lower than the Enacted 2011 Plans. *See* Table C below and Exhibit 5. In the four districts about which the Court raised concerns as to racial predominance only two precincts are split by the Special Master's Recommended Plan. In contrast, the Enacted 2011 Plan, which did not pay much attention to precinct lines, split eighty-

[7] In a short email to the Court on November 13, I confirmed that this was the correct interpretation of their Order.

eight precincts in just these four districts and the Enacted 2017 Plan split a total of seven precincts for those four districts.

Table C. Comparison of Precinct (VTD) Splits Among Selected Districts

District	2011 Plan	2017 Plan	**Rec. Plan**	chg from 2011	chg from 2017
Senate 21	33	3	**0**	-33	-3
Senate 28	15	2	**0**	-15	-2
House 21	25	2	**2**	-23	0
House 57	15	0	**0**	-15	0

The Court also ordered the Special Master to "draw districts that are more compact than the 2011 Enacted Districts." Order at 7. Compactness is a traditional districting principle, an aesthetic value, and a geometric concept. *See* 316 F.R.D. at 141 (comparing mathematical measures of compactness with "an 'eyeball' approach") (quoting *Bush v. Vera*, 517 U.S. 952, 960 (1996)). In evaluating the Enacted 2011 Plan, the Court concluded that compactness was "given little consideration" and that "compactness was subordinated to . . . racial goals throughout the redistricting." *Id.* at 138. It noted, in particular, the lack of compactness in the majority-minority districts in the plan, which suggested the predominant role of race in their construction. *Id.* at 142-66. Compactness measures for the four remedial districts are presented in Table D below; scores for the entire plan appear in Exhibit 3.

The Court urged the evaluation of district compactness (at least as comparing the Special Master's Plan to the Enacted 2011 Districts) based on two particular mathematical scores: the Reock and the Polsby-Popper Measures. The Reock test is "an area-based measure that . . . computes the ratio of the area of the district to the area of the minimum enclosing circle for the

district." Caliper Corporation, *Maptitude for Redistricting: Supplemental User's Guide*, 117-19 (2010) (citations omitted). The Polsby-Popper test "computes the ratio of the district area to the area of a circle with the same perimeter: 4(pi)Area/(Perimeter squared)." *Id.* (citations omitted). For both measures, a score of 0 is the least compact, and a score of 1 is the most compact.

These particular measures served as significant constraints in formulating the Recommended Plan. Both measures compare a district to a circle, and circles cannot tessellate to serve as building blocks for larger shapes, let alone for counties and municipalities that often have irregular boundaries. No districting plan can be made up of districts with perfect Reock or Polsby-Popper compactness scores. Moreover, many shapes that appear visually compact, such as longer rectangles, will score poorly according to these measures, even though they may perform well according to "the eyeball test."[8] (Indeed, a perfect square district will merely earn a Reock score of 0.66.) For this reason, mathematical scores of compactness ordinarily need to be supplemented with a common sense appreciation for the geometric constraints imposed by the irregular precinct building blocks of a plan, as well as the noncompact shapes of political subdivisions, such as counties and cities.

With those caveats, the Special Master's Recommended Plan scores well on the compactness measures the Court's Order suggested for evaluation. Unsurprisingly, the Special Master's Plan scores better than the extremely noncompact districts in the Enacted 2011 Plan. It also has higher Reock and Polsby-Popper Scores than the 2017 Districts. Indeed, Recommended Senate District 28, which comes about as close as one can to creating a circle out of whole

[8] As will be seen in the longer description of individual districts below, the peculiarity of these measures explains some of the changes made in Guilford County from the Draft House Plan to the Recommended House Plan.

precincts, has one of the highest compactness scores one will see in a districting plan – a Reock score of .70.

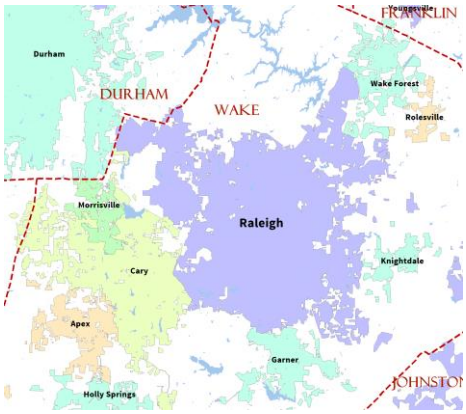
Table D. Comparison of Compactness Scores Among Selected Districts

	Reock					Polsby-Popper				
District	2011 Plan	2017 Plan	**Rec. Plan**	chg from 2011	chg from 2017	2011 Plan	2017 Plan	**Rec. Plan**	chg from 2011	chg from 2017
Senate 21	.34	.42	**.48**	+.14	+.06	.06	.25	**.35**	+.29	+.10
Senate 28	.25	.40	**.70**	+.45	+.30	.12	.17	**.28**	+.16	+.11
House 21	.19	.29	**.40**	+.21	+.11	.08	.12	**.28**	+.20	+.16
House 57	.39	.37	**.44**	+.05	+.07	.17	.28	**.37**	+.20	+.09

The Court's Order requires the Special Master to consider municipal boundaries. Order at 7. The Court determined that "little to no attention was paid to political subdivisions" in the Enacted 2011 Plan. 316 F.R.D. at 138. The 2017 Plan fares better, but in the areas of concern to the Court, several districts continue to ignore municipal boundaries.

To be clear, municipalities must be split by any redistricting plan. Because the population of towns and cities does not subdivide neatly into units equal to the ideal population of a district, several districts must traverse municipal boundaries. Moreover, respecting municipal boundaries often conflicts with the goals of compactness and avoiding precinct splits. As displayed in the maps below, several North Carolina cities are themselves bizarrely shaped and even noncontiguous, due to annexations. Precincts also split towns and cities, so that a plan made up of whole precincts will often split municipal boundaries. Moreover, some precincts span two municipalities, such that a decision to follow precinct lines will lead to splits of municipalities.

Boundaries of Selected Census Designated Places (CDPs)



Goldsboro

Greensboro

Raleigh

As difficult a principle as respecting political subdivisions may be for any North Carolina redistricting plan to follow, the Special Master's Recommended Plan pays great attention to the boundaries of municipalities. *See* Table E below and Exhibit 4. The plan does this, not only because such a consideration is a traditional districting principle ordered by the Court, but also to avoid any charges of racial predominance or partisan bias. Unlike respecting "communities of interest," municipal boundaries are the kinds of non-partisan guideposts that a court-drawn plan can follow without being accused of playing favorites among contending definitions of relevant communities deserving of protection.

The power of this principle in determining the boundaries of the Special Master's Recommended Plan is evident from a simple examination of the district maps. For example, Recommended Senate District 28, like Recommended House District 61, is almost entirely contained by the boundaries of Greensboro. By altering the lines in House Districts 21 and 22, the Recommended Plan respects (to the extent possible given precinct lines) the boundaries of Clinton and retains the portion of Enacted House District 21 that contains (also to the extent possible given precinct lines) the city of Goldsboro. To be sure, the Special Master's Recommended Plan must split certain municipalities to comply with the law and other principles ordered by the Court. But municipal boundaries guided the drawing of the Recommended Plan to an extent that distinguishes it from both the Enacted 2011 and 2017 Plans.

Table E. Comparison of Municipality (CDP) Splits Among Selected Districts

District	2011 Plan	2017 Plan	**Rec. Plan**	chg from 2011	chg from 2017
Senate 21	5	4	**2**	-3	-2
Senate 28	4	2	**1**	-3	-1
House 21	10	7	**7**	-3	0
House 57	2	1	**2**	0	+1

Finally, the Court ordered the Special Master to avoid pairing incumbents. However, the Court made clear that "the Special Master shall treat preventing the pairing of incumbents as 'a distinctly subordinate consideration' to the other traditional redistricting policy objectives followed by the state." Order at 7 (quoting *Ga. State Conf. of NAACP v. Fayette Cty. Bd. of Comm'rs*, 996 F. Supp. 2d 1353, 1363 (N.D. Ga. 2014)). The Court also made clear that such unpairing should occur "[*a*]*fter redrawing the districts*" and "only to the extent that such adjustment of district lines does not interfere with remedying the constitutional violations and otherwise complying with federal and state law." *Id.* (emphasis added).

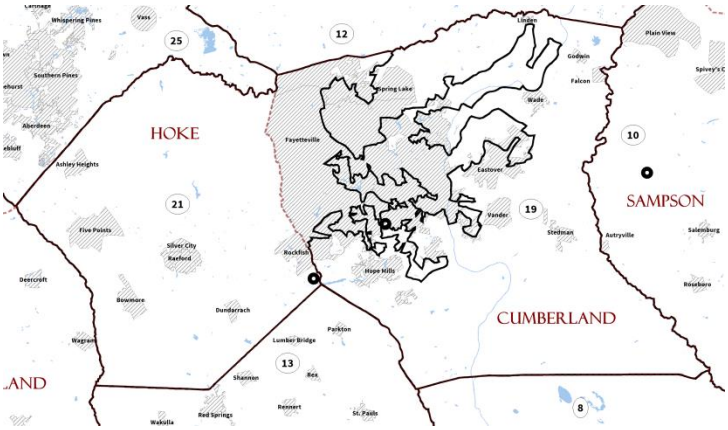
As the Court's Order recognizes, incorporation of incumbency-related concerns necessarily puts the Special Master and any court in a difficult position. *See* Order at 6 (quoting *Wise v. Lipscomb*, 437 U.S. 535, 541 (1978) (noting that courts lack "political authoritativeness" and must act "in a manner free from any taint of arbitrariness or discrimination" in drawing remedial districts")). While recognizing that any change in district lines will have political and partisan effects, it is critical that the process of line-drawing be nonpartisan and transparent in its treatment of incumbency. To achieve that goal and to respect the Court's Order that incumbency be considered only "after redrawing the districts," the Special Master drew the Draft Plan without consideration of incumbency and released it to the parties and the public. The parties

were then invited to make suggestions as to how incumbents should be unpaired. The Plaintiffs did so; the Legislative Defendants refused, but nevertheless objected to all of the Plaintiffs' suggested modifications as motivated by partisanship.

Per the Court's Order, the Special Master's Recommended Plan unpairs all incumbents to the extent possible. Indeed, no incumbents are paired in the Recommended House Plan, and only two incumbents remain paired in the Recommended Senate Plan (in Recommended Senate District 27). To avoid even the appearance of partisanship, no incumbents paired in the Draft House Plan remain paired in the Recommended House Plan. With respect to the incumbent pairing in Recommended Senate District 27, the Special Master has provided the Court with two scenarios that resolve the pairing in the event the Court comes to a different determination as to whether doing so conflicts with the other principles in the plan. See Exhibit 10. Moreover, since the Draft Plan was released prior to the incorporation of incumbency in the Recommended Plan, the Court has available to it a plan that ignores incumbency should it determine that the incumbent unpairings conflict with the other principles identified in the Court's Order. As difficult as it is to incorporate incumbency into a nonpartisan plan built around other traditional districting principles, the Special Master's Recommended Plan is successful in doing so.

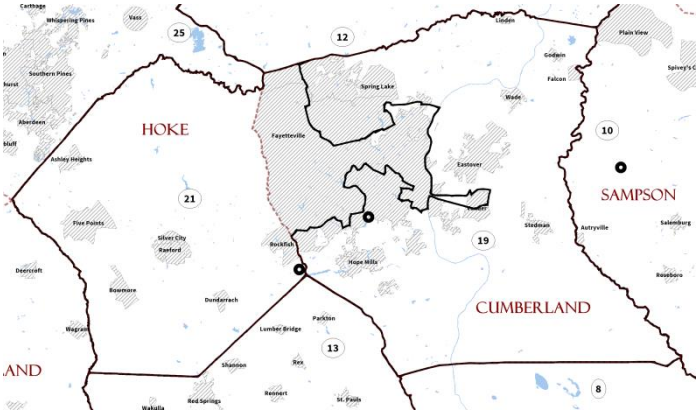
Detailed Description of the Districts in the Special Master's Recommended Plan

Senate Districts 19 and 21



The Court struck down District 21 in the 2011 Senate Plan as a violation of the Fourteenth Amendment's prohibition on excessive race consciousness in districting. *See Covington*, 316 F.R.D. at 146-47 (describing it as a noncompact, majority-minority district that

split precincts and municipalities along racial lines). The Court continues to harbor serious constitutional concerns with the district as redrawn in 2017. *See* Order at 1. These arise, no doubt, because of the district's noncompact shape in the Enacted 2017 Plan – in particular, the long extension into Fayetteville that seems surgically designed to capture heavily African American precincts, while evading heavily white precincts.



The Special Master's Recommended Plan attempts to remedy any constitutional infirmity in Enacted 2017 District 21 by utilizing whole precincts to create a compact district that, like its predecessors, spans Hoke and Cumberland counties. It begins by uniting split precincts in the northern part of the district; thereby moving Fort Bragg and Spring Lake into District 21. Doing so avoids the axe-like shape of the intrusion into Fayetteville that characterized the Enacted 2017 version of the district. Unlike the 2017 version of the district, Recommended District 21 is constructed of whole precincts – not a single one is divided in the construction of this district. The district includes just enough of Fayetteville so as to comply with one person, one vote. The boundaries of the district are determined by the shape of the precinct boundaries. As noted in Table F below, the Recommended Districts split fewer precincts and achieve much higher compactness scores than either the Enacted 2011 or Enacted 2017 versions of the districts. No changes were made to these districts between the Draft Plan and the Recommended Plan.

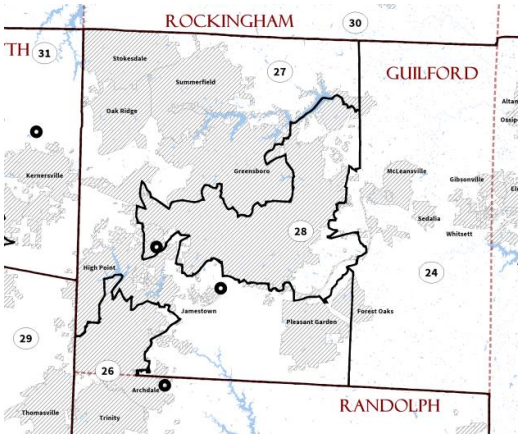
Senate District 28 and the Surrounding Districts in Guilford County



For similar reasons explained above as to District 21, the Court struck down the 2011 version of Senate District 28. *See Covington*, 316 F.R.D. at 147-48 (describing Enacted 2011 Senate District 28 as a non-compact, majority-minority district that split municipalities so as "to achieve the 50%-plus-one goal"). The 2017 incarnation of the district is much more compact than its predecessor and is largely contained within the CDP of Greensboro. However, the Court continues to harbor constitutional concerns as to racial predominance with regard to the district's 2017 configuration, no doubt because of the District's tracking of the African American precincts in Greensboro. As expressed in the Special Master's Recommended Plan, the newly configured district is a compact district – a circle of precincts, which is the shape privileged by the Reock and Polsby-Popper compactness measures set out as criteria in the Court's Order. The newly drawn district is contained almost completely within the city (CDP) of Greensboro, and is made up of whole precincts. 2017 Enacted Senate District 26 remains untouched, per the Court's order that the Special Master's Plan may only alter districts adjoining the Subject Districts. District 24 is slightly changed by moving west to the Greensboro CDP border to accommodate the new boundaries of District 28. District 27 "retreats" from most of central Greensboro so as to contain much of the outskirts of Greensboro along with nearby towns of Summerfield, Oak Ridge, and Stokesdale.

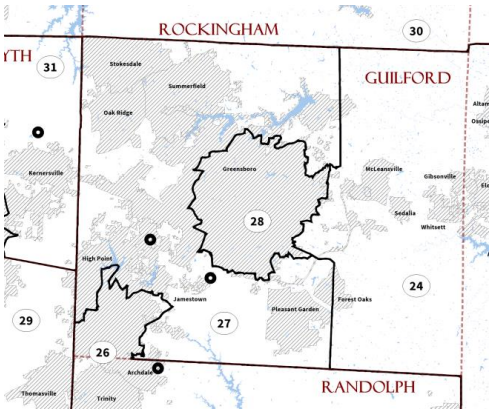
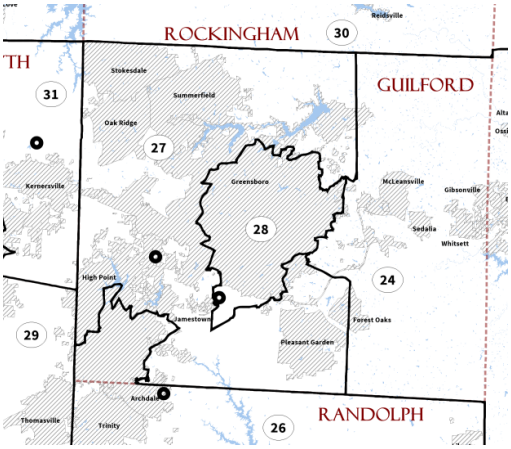
As stated earlier in the discussion of incumbency, Recommended Senate District 27 is the only district in the Recommended Plans that contains two incumbents. It pairs Senator Gladys Robinson with Senator Trudy Wade. Neither the Plaintiffs nor the Defendants have urged the Special Master to unpair these incumbents. To resolve this incumbent pairing would require significant restructuring of the district.



While not resolving this incumbent pairing in the Recommended Plan, the Special Master has provided the Court with two scenarios that would unpair these incumbents. The easiest way to do so would be to draw Senator Wade's residence into Recommended Senate District 28. The scenario provided below and in Exhibit 10 – titled Alternate Senate Plan 1 – demonstrates how this could be done with minimal disruption to the plan. The scenario "trades" the precinct containing Senator Wade's residence with one to the east, moving Senator Wade into Recommended District 28. The Special Master has not recommended this alternative because it effectively takes both Senator Wade and Senator Robinson out of the territory that comprises most of their present districts. However, if the Court were looking to unpair incumbents with minimal disruption to the Recommended Plan, this scenario would provide the easiest path to doing so.

It is also possible to draw Senator Robinson's residence into District 28, for which she currently serves as the incumbent. The most minimal way to do so, as depicted below in Guilford Senate Alternate 2, is to connect the precincts between her home and Recommended District 28. Enacted 2017 Senate District 28 splits the precinct containing her home, as does Guilford Senate Alternate 2, but moving the entire precinct could achieve the same result. These moves must be compensated for elsewhere in the plan. This alternative plan does so by moving three precincts in the northern part of Recommended District 28 into District 27, but any number



of precincts along the outside of District 28 could achieve the same result. The only reason the Special Master has not included this revision in the Recommended Plan is that it does decrease the compactness of District 28, and causes District 28 to traverse into High Point. Also, no one has yet called for this kind of revision. However, the two incumbents could be unpaired without violating any provision of state or federal law.

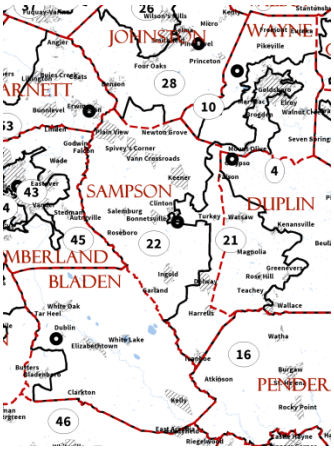
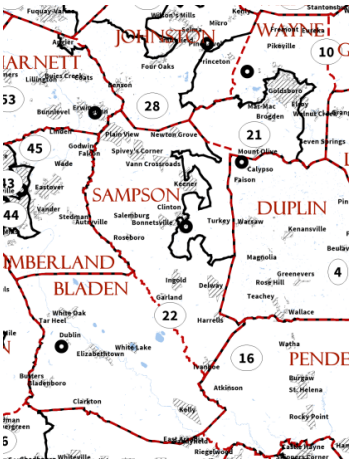
Alternate 2

House Districts 21 and 22



As with the Senate Districts described above, the Court struck down Enacted 2011 House District 21 as a violation of the Equal Protection Clause of the Fourteenth Amendment. 316 F.R.D. at 155-56. In its 2011 incarnation, the district spanned portions of three counties, divided seven municipalities and multiple precincts, in order to reach majority-minority status. *Id.* The Enacted 2017 version, which remains somewhat bizarre in shape, continues to join Goldsboro in Wayne County with portions of eastern Sampson County splitting the town of Clinton in half. The Court's suspicions as to the remaining racial predominance in Enacted 2017 House District 21 grow, no doubt, from the fact that the included precincts in Sampson are correlated with the racial percentages in those precincts. More specifically, the district continues to include the more heavily African American precincts in the County, while excluding the heavily white precincts nearby.

The Special Master's Recommended House Plan addresses the district's lack of compactness by placing the Sampson County precincts closest to the Wayne County border into Recommended District 21. It thereby avoids the selective inclusion of heavily African American precincts that characterized the 2011 and 2017 versions of the district. The District continues to retain its configuration in Wayne County, which is principally defined by the boundaries of Goldsboro. It extends up to the boundaries of Clinton and only includes a tiny portion of it (83 people) because of a small intrusion by the nearby precinct. Because Districts 21, 22 and 10 approach the upper limit (almost exactly five percent deviation) of what is permissible under one-person, one-vote, a precinct must be split in Sampson County. This is true for both the Enacted 2017 House Plan as well as the Recommended House Plan. The Special Master's Draft House District 21 split more than one precinct to gain additional compactness for the district and



to avoid the small intrusion into Clinton. Given the Legislative Defendants' expressed concerns as to split precincts, the Special Master's Recommended Plan made small revisions so that only one precinct in Sampson County is split, as in the Enacted 2017 District 21.

Special Master's Recommended Plan

House District 57 and Surrounding Districts in Guilford County

The Court determined that Enacted 2011 House Districts 57, 58, and 60 in Guilford County were drawn with race as their predominant factor. 316 F.R.D. at 163-64. The Court found that those three districts "contain[ed] 70.67% of the city of Greensboro, but manage[d] to capture 88.39% of Greensboro's African-American voting age population." *Id*. at 164. Several of the most non-compact features of those districts are cut away in the Enacted 2017 versions of the districts. However, the Court continues to harbor concerns as to racial predominance in Enacted 2017 District 57, no doubt because the district retains a Black Voting Age Population (BVAP) of 60.75% by largely tracking the heavily African American precincts in northeastern Greensboro in a reverse "L shaped" pattern.

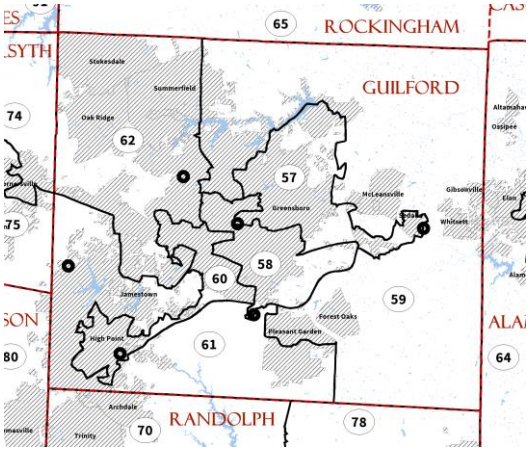
The directions from the Court with respect to redrawing this district are more specific than for others in the remedial plan. "As to House District 57," the Court's Order directs, "the redrawn lines shall also ensure that the unconstitutional racial gerrymanders in 2011 Enacted House Districts 58 and 60 are cured." Order at 5. This direction presents additional constraints as to how the districts adjoining District 57 must be drawn. In particular, in redrawing District 57, one must make sure not to recreate one of the districts previously struck down. However, of the Enacted 2011 House Districts determined to be unconstitutional, only Enacted 2017 House District 57 continues to pose a constitutional problem for the Court and needs to be redrawn.

The Special Master's Recommended Plan redraws House District 57, but keeps intact the other "Subject Districts" (House Districts 58 and 60) as redrawn in the 2017 Plan. In redrawing House District 57, the Recommended Plan creates it as a north Greensboro district, made up of whole precincts, which largely follows the city lines. It takes one precinct out of Enacted 2017

House District 59 that contains the section of northeastern Greensboro to the east of Lake Townshend. Its northern boundary is determined by the precincts that track the northern city limits of Greensboro, which it takes from Enacted 2017 District 62. Its eastern boundary also follows the precincts that include northeastern Greensboro. Its northwest boundary includes enough precincts so as to include the residence of Representative John Blust, who is the only incumbent included in the district. The district includes a majority of the people who were drawn into the Enacted 2017 version of his district (42,350 of the 80,732 people in the Enacted 2017 version of the district). It fills in by moving south so as to create a compact district with a Reock score of .44 and a Polsby-Popper score of .37. It is therefore more compact than the Enacted 2017 version of the district, which has a Reock Score of .37 and a Polsby-Popper Score of .28, or the Enacted 2011 version of the District, which had a Reock score of .39 and Polsby-Popper score of .17.

The Recommended Plan makes minor changes to District 59. Because of the precinct in northeastern Greensboro transferred from Enacted 2017 District 59 into Recommended District 57, Recommended District 59 moves west over the northern boundary of Recommended District 57 to include two additional precincts. It extends up to its current boundary in Summerfield – that is, the northwestern boundary of Enacted 2011 House District 59.

Recommended House District 62 extends along the western expanse of Guilford County. Because of the territory it cedes to Recommended House Districts 59 and 57, it must move south to comply with one person, one vote. It therefore contains the portions of Enacted 2017 House Districts 61 and 62 that had touched the county border, up to the point where its boundaries are determined by Enacted 2017 House District 60. It extends into Greensboro just slightly in order to pick up the necessary population to comply with one person, one vote. (Most of its population



and its incumbent are from Enacted House District 61, but the Recommended Plan keeps the same numbering as the Enacted 2017 Plan for ease of comparison.)

Recommended House District 61 is a compact district fully contained within central Greensboro. It extends to the eastern border of the city, picking up the southernmost section of Enacted 2017 House District 57 and a majority (48,789) of its people. Unlike the Enacted 2017 House District 57, though, it extends west, meeting Recommended District 62 where it enters Greensboro. Its southern border is determined by the northernmost boundaries of Enacted 2017 District 58 (which remains unchanged in the Recommended Plan).
